Reoperative Abdominal Surgery Solly

Mizrahi, Petachia Reissman, Hiram C Polk, 2014-07-21 Reoperation is one of surgery's greatest challenges. This book provides a practical reference on how to prevent, identify and treat all abdominal complications. Organised primarily by body system, *Reoperative Abdominal Surgery* covers the spectrum of conditions and complications faced by the general surgeon. Separate chapters also cover safety issues and specific issues related to diagnosis, surgical technique and patient presentation. Combining the expertise and advice of leading international surgeons, the book offers a clinical, instructive manual for trainee and practising surgeons. Focus on abdominal surgery, the key province of the general surgeon. Expert guidance on the prevention, identification and management of post-operative complications. Key reference on difficult surgical areas for residents and young surgeons. Experience and advice from best surgeons around the world. Covers entire spectrum of reoperative abdominal surgery.

Reoperative Pelvic Surgery Richard P. Billingham, Kathleen C. Kobashi, William A. Peters, 2009-08-15 The impetus for this book came from the recent appearance of single specialty books pertaining to reoperative surgery on various organs in the pelvis as well as from the recognition that several different disciplines are involved with the challenges of reoperative pelvic surgery. Surgeons often encounter challenging dilemmas involving organ systems that have historically been attended to by surgeons representing closely related but distinct specialty areas. With increasing sophistication and knowledge about management of anatomically adjacent organs by the specialties of gynecologic oncology, gynecology, urology and colon and rectal surgery as well as the emergence of specialty training programs in urogynecology and pelvic floor disorders, we thought it appropriate and timely to create a textbook acknowledging this increasing knowledge and interspecialty collaboration. To this end, where appropriate, we have included collaborative authors from each of the specialties, any of whom may be called upon to address a particular anatomic area. It seems inevitable that situations will arise in which the collaborative expertise of several separate specialties may converge to provide surgeons the benefit of the combined thought processes that would prove invaluable when such difficult problems are encountered. With this in mind, the editors from the fields of gynecologic oncology, urology and colon and rectal surgery identified experts in their own fields who could best contribute to the management of specific problem areas. For example, since reoperations for endometriosis may involve uterus, adnexae, ovaries or the colorectum, the chapter concerning this condition has been coauthored by specialists in colorectal surgery and gynecologic oncology. We have been fortunate to find experts who have collaborated to bring available evidence-based medicine, best demonstrated practices and personal experience to their contributions.

The SAGES Manual of Perioperative Care in Minimally Invasive Surgery Richard L. Whelan, James W. Fleshman, Dennis L. Fowler, 2006-01-16. The second SAGES Society of American Gastrointestinal Endoscopic Surgeons manual was intended to be a companion piece for the successful first SAGES manual edited by Carol Scott Connor that was published more than 4 years ago. Originally, the goal was to concentrate on tersely covered or often ignored aspects of the preoperative preparation of the patient and the operating room as well as the postoperative care of patients undergoing minimally invasive operations. It was also our intention to include a section for each procedure where several different port placement schemes would be presented and briefly discussed. Unique to this manual, the impact of the patient's body habitus—short or long, narrow or wide—on port placement is also taken into account for many of the procedures. Also unique are chapters devoted to hypothermia, port wound closure, and the management of subcutaneous emphysema and abdominal wall hemorrhage caused by trocars. Naturally, the surgeon tends to focus on the technical aspects of the procedure such as the operative tasks to be carried out, the order of operation, and the position of the surgeon and assistant. However, it is critical that the surgeon be aware that the CO pneumoperitoneum, far more so than laparotomy, results in multiple physiologic alterations that if not compensated for by the anesthesiologist and surgeon may endanger the patient or prevent the laparoscopic completion of the procedure.
