Ambrosetti,2022-07-27 The impact of Russia's war against Ukraine has been devastating both politically and environmentally On top of the environmental damage directly caused by military operations the invasion has put an abrupt end to the EU Russia green cooperation which had previously raised many hopes At the same time it has also shifted international attention away from climate and environmental concerns which are particularly acute in the post Soviet region This Report analyses some of the main climate change and environmental issues in the post Soviet space providing an initial assessment of the invasion's impact The bulk of the latest scholarly and policy production on these matters focuses on Russia given the country's geopolitical and energy relevance However this analysis finds that environmental disasters such as the desertification of the Aral Sea transcend state borders and require a broader approach both from an analytic and policy standpoint

Central Asia Richard Auty, Indra de Soysa, 2006-08-21 Drawing upon recent progress in development economics and political science the book provides fresh analysis of the Caucasus and Central Asia CCA countries transition to a market economy by tracing the impact of natural resource endowment The book examines the synergies between energy rich and energy poor states and highlights the practical consequences of both well managed and poorly managed deployment of energy Featuring contributions from prominent specialists on resource driven economies the book argues that unless CCA elites change the way in which they deploy natural resource revenues regional development will fall short of its potential with possible disastrous consequences The contributors apply the experience of the developing market economies to demonstrate that the region still holds considerable potential to become an important stable supplier of raw materials and a source of industrial demand to the global economy However the CCA is equally likely to become a threat to the global economy as a consequence of the misuse of energy revenues to promote the interests of predatory political elites The Reform of Teacher Education

Oil Is Not a Curse Pauline Jones Luong,Erika Weinthal,2010-08-23 This book makes two central claims first that mineral rich states are cursed not by their wealth but rather by the ownership structure they choose to manage their mineral wealth and second that weak institutions are not inevitable in mineral rich states Each represents a significant departure from the conventional resource curse literature which has treated ownership structure as a constant across time and space and has presumed that mineral rich countries are incapable of either building or sustaining strong institutions particularly fiscal regimes The experience of the five petroleum rich Soviet successor states Azerbaijan Kazakhstan the Russian Federation Turkmenistan and Uzbekistan provides a clear challenge to both of these assumptions Their respective developmental trajectories since independence demonstrate not only that ownership structure can vary even across countries that share the same institutional legacy but also that this variation helps to explain the divergence in their subsequent fiscal regimes
