Prof. Paola Paoloni,Prof. Mauro Paoloni,Prof. Simona Arduini,2019-04-11 **Recent Research in Financial Modelling** Evert J. Stokking,Giovanni Zambruno,2012-12-06 The book contains a selection of recently revised papers that have initially been presented at two different meetings of the EURO Working Group on Financial Modelling The papers related to the microstructure of capital markets provide evidence that the price dynamics of financial assets can on ly be explained and modelled on the basis of a careful examination of the decision process which leads traders to interact and fix the equilibrium prices The papers by Pec cati Luciano Ferrari and Cornaglia belong to this category and help considerably understand the performance of markets which are relatively far from perfection owing to thinness frictions taxation and the like This is

indeed the case for some European Exchanges The very foundations of quantitative financial analysis have been discussed in the contributions of Luciano Canestrelli Uberti and Van der Meulen The classical although recent advances on the pricing of derivative securities have been analyzed and applied by Kremer Hallerbach and Jensen Niel son thus demonstrating that established theories still provide space for a deeper investigation Another major topic of interest relates to empirical studies about how markets behave with respect to theoretical models In this respect the contributions of Viren Bradfield and Wilkie Pollock are quite significant They present evidence based on real data discussed in the light of advanced statistical techniques It is apparent that Corporate Finance and Capital Markets are becoming more and more related and interacting with each other
