Research To Protect Restore And Manage The Environment:

Research to Protect, Restore, and Manage the Environment National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Environmental Research, 1993-02-01 This book assesses the strengths and weaknesses of current environmental research programs describes the desirable characteristics of an effective program and recommends cultural and organizational changes to improve the performance of environmental research Research areas in need of greater emphasis are identified and overall directions for environmental research are recommended The book also comments on the proposal to establish a National Institute for the Environment and on the elevation of the Environmental Protection Agency to cabinet status *Strengthening Science at the U.S. Environmental Protection Agency--National Research Council (NRC) Findings* United States. Congress. House. Committee on Science. Subcommittee on Energy and Environment, 2001 *Building a Foundation for Sound Environmental Decisions* National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Research Opportunities and Priorities for EPA, 1997-08-01 Over the past decades environmental problems have attracted enormous attention and public concern Many actions have been taken by the U S Environmental Protection Agency and others to protect human health and ecosystems from particular threats Despite some successes many problems remain unsolved and new ones are emerging Increasing population and related pressures combined with a realization of the interconnectedness and complexity of environmental systems present new challenges to policymakers and regulators Scientific research has played and will continue to play an essential part in solving environmental problems Decisions based on incorrect or incomplete understanding of environmental systems will not achieve the greatest reduction of risk at the lowest cost This volume describes a framework for acquiring the knowledge needed both to solve current recognized problems and to be prepared for the kinds of problems likely to emerge in the future Many case examples are included to illustrate why some environmental control strategies have succeeded where others have fallen short and how we can do better in the future **Strengthening Science at the U.S. Environmental Protection Agency** National Research Council, Commission on Life Sciences, Commission on Geosciences, Environment, and Resources, Board on Environmental Studies in Toxicology, Committee on Research and Peer Review in EPA, 2000-10-25 In the three decades since the U S Environmental Protection Agency EPA was created the agency s scientific and technical practices and credibility have been independently assessed many times in reports from the National Research Council NRC EPA Science Advisory Board General Accounting Office and many other organizations in congressional oversight and judicial proceedings and in countless criticisms and lawsuits from stakeholders with interests in particular EPA regulatory decisions As a previous independent panel put it in the 1992 report *Safeguarding the Future Credible Science Credible Decisions* EPA s policy and regulatory work receives a great deal of public attention but the agency s scientific performance typically receives a similar degree of attention only when the

scientific basis for a decision is questioned Thus strong scientific performance is important not only to enable EPA to make informed and effective decisions but also to gain credibility and public support for the environmental protection efforts of EPA and the nation This report is the fourth and final one in a series prepared by two independent expert committees convened by the NRC in response to a request from Congress and to subsequent related requests from EPA The Committee on Research Opportunities and Priorities for EPA the companion committee in this study was charged to provide an overview of significant emerging environmental issues identify and prioritize research themes most relevant to understanding and resolving those issues and consider the role of EPA s research program in the context of research being conducted or supported by other organizations That committee published an interim report in 1996 and a final report Building a Foundation for Sound Environmental Decisions in 1997 The Committee on Research and Peer Review in EPA was charged to evaluate research management and scientific peer review practices in the agency The committee published an interim report in 1995 and this final report
