Research Argumentation:

Business Research Through Argument Mike Metcalfe, 2012-12-06 This book suggests that business research in the collection analysis and communication of evidence will benefit from explicit acceptance of research as argumentation. Argumentation is the process of compiling an argument through selection and organization of the relevant evidence. Recently business research methods books have placed too much emphasis on the scientific method as brute empiricism using only large sample statistical testing and demanding prediction through retesting old theories. Especially with regard to the study of human activity there is now much evidence that there is not one special scientific method. This book argues that all types of empirical data including statistics and personal experiences be accepted as data but that it is essential that these observations be explained. This book will provide researchers and postgraduate business students with a strategy for conducting research that encourages thought, provides a way of critically perceiving previous research as well as suggesting a logical structure for communicating their research.

Fundamentals of Legal Argumentation Eveline T. Feteris, 2017-07-10 This book is an updated and revised edition of *Fundamentals of Legal Argumentation* published in 1999. It discusses new developments that have taken place in the past 15 years in research of legal argumentation, legal justification and legal interpretation as well as the implications of these new developments for the theory of legal argumentation. Almost every chapter has been revised and updated and the chapters include discussions of recent studies, major additions on topical issues, new perspectives and new developments in several theoretical areas. Examples of these additions are discussions of recent developments in such areas as Habermas theory, MacCormick's theory, Alexy's theory, Artificial Intelligence and law and the pragma-dialectical theory of legal argumentation. Furthermore, it provides an extensive and systematic overview of approaches and studies of legal argumentation in the context of legal justification in various legal systems and countries that have been important for the development of research of legal argumentation. The book contains a discussion of influential theories that conceive the law and legal justification as argumentative activity. From different disciplinary and theoretical angles, it addresses such topics as the institutional characteristics of the law and the relation between general standards for moral discussions and legal standards such as the Rule of Law. It discusses patterns of legal justification in the context of different types of problems in the application of the law and it describes rules for rational legal discussions. The combination of the sound basis of the first edition and the discussions of new developments make this new edition an up-to-date and comprehensive survey of the various theoretical influences which have informed the study of legal argumentation. It discusses salient backgrounds to this field as well as major approaches and trends in the contemporary research. It surveys the relevant theoretical factors both from various continental law traditions and common law countries.

Reflections on Theoretical Issues in Argumentation Theory Frans H. van Eemeren, Bart Garssen, 2015-08-08 This volume presents a selection of papers reflecting key theoretical issues in argumentation theory. Its six sections are devoted to specific themes.

including the analysis and evaluation of argumentation argument schemes and the contextual embedding of argumentation The section on general perspectives on argumentation discusses the trends of empiricization contextualization and formalization offers descriptions of the analytical and evaluative tools of informal logic and highlights selected principles that argumentation theorists do and do not agree upon In turn the section on linguistic approaches to argumentation focuses on the problem of distinguishing between explanation and argument while also elaborating on the role of verbal indicators of argument schemes All essays included in this volume point out notable recent developments in the study of argumentation

Argumentation Theory: A Pragma-Dialectical Perspective Frans H. van Eemeren, 2018-07-27 The book offers a compact but comprehensive introductory overview of the crucial components of argumentation theory In presenting this overview argumentation is consistently approached from a pragma dialectical perspective by viewing it pragmatically as a goal directed communicative activity and dialectically as part of a regulated critical exchange aimed at resolving a difference of opinion As a result the book also systematically explains how the constitutive parts of the pragma dialectical theory of argumentation which are discussed in a number of separate publications hang together The following crucial topics are discussed 1 argumentation theory as a discipline 2 the meta theoretical principles of pragma dialectics 3 the model of a critical discussion aimed at resolving a difference of opinion 4 fallacies as violations of a code of conduct for reasonable argumentative discourse 5 descriptive research of argumentative reality 6 analysis as theoretically motivated reconstruction 7 strategic manoeuvring aimed at combining achieving effectiveness with maintaining reasonableness 8 the conventionalization of argumentative practices 9 prototypical argumentative patterns 10 pragma dialectics amidst other

Kim,Wolff-Michael Roth,2018-11-01 Science educators have come to recognize children s reasoning and problem solving skills as crucial ingredients of scientific literacy As a consequence there has been a concurrent widespread emphasis on argumentation as a way of developing critical and creative minds Argumentation has been of increasing interest in science education as a means of actively involving students in science and thereby as a means of promoting their learning reasoning and problem solving Many approaches to teaching argumentation place primacy on teaching the structure of the argumentative genre prior to and at the beginning of participating in argumentation Such an approach however is unlikely to succeed because to meaningfully learn the structure grammar of argumentation one already needs to be competent in argumentation This book offers a different approach to children s argumentation and reasoning based on dialogical relations as the origin of internal dialogue inner speech and higher psychological functions In this approach argumentation first exists as dialogical relation for participants who are in a dialogical relation with others and who employ argumentation for the purpose of the dialogical relation With the multimodality of dialogue this approach expands argumentation into another level of physicality of thinking reasoning and problem solving in classrooms By using empirical data from elementary classrooms this book explains how argumentation emerges and develops in and from classroom interactions by focusing on thinking and reasoning through in relations with others and the learning environment Discourse, conversation and argumentation:

Argumentation in Everyday Life Jeffrey P. Mehlretter Drury,2019-01-21 Good coverage of concepts with understandable explanations of theory Very user friendly with exercises to use in and out of class Connects well with other communication classes through the application of other communication concepts to argumentation Christopher Leland Azusa Pacific University Argumentation in Everyday Life provides students with the tools they need to argue effectively in the classroom and beyond Jeffrey P Mehlretter Drury offers rich coverage of theory while balancing everyday applicability

allowing students to use their skills soundly Drury introduces the fundamentals of constructing and refuting arguments using the Toulmin model and ARG conditions Acceptability Relevance and Grounds Numerous real world examples are connected to the theories of rhetoric and argumentation discussed enabling students to practice and apply the content in personal civic and professional contexts as well as traditional academic debates Encouraging self reflection this book empowers students to find their voice and create positive change through argumentation in everyday life Unique resources to help students navigate this complex terrain of argumentation The Debate Situation offers students a birds eye view of any given debate or exchange of arguments between two or more people organized around three necessary components arguments issues and the proposition The visual model of the debate situation illustrates how these features work together in guiding a debate and it lays the groundwork for understanding and generating arguments Easy to Use Standards for Evaluating Arguments combine a prominent argument model named after logician Stephen Toulmin with a standards based approach the ARG conditions to test of quality of an argument The ARG conditions are three questions an advocate should ask of an argument in determining whether or not it is rationally persuasive These questions are best served by research but don t necessary require it and thus they provide a useful posture for critically assessing the arguments you encounter Multiple Everyday Life examples with an emphasis on context help students to connect the lessons more fully to their everyday life and encourages them to grapple explicitly with dilemmas arising in different contexts Find Your Voice Prompts focus on choice empowerment to offer strategies for students to choose which arguments to address and how to address them empowering students to use argumentation to find their voice Build Your Skill Prompts use objective applications to test how well students have learned the information They offer a chance to apply the material to additional examples that students can check against the answers in Appendix II Two application exercises at the end of each chapter encourage students to think critically about the content discuss their thoughts with their peers and apply the material to everyday situations

Systematic Approaches to

Argument by Analogy Henrique Jales Ribeiro,2014-07-09 The present volume assembles a relevant set of studies of argument by analogy which address this topic in a systematic fashion either from an essentially theoretical perspective or from the perspective of it being applied to different fields like politics linguistics literature law medicine science in general and philosophy All result from original research conducted by their authors for this publication Thus broadly speaking this is an exception which we find worthy of occupying a special place in the sphere of the bibliography on the argument by analogy In effect most of the contexts of the publications on this topic focus on specific areas for example everyday discourse science or law theory while underestimating or sometimes even ignoring other interdisciplinary scopes as is the case of literature medicine or philosophy The idiosyncrasy of this volume is that the reader and the researcher may follow the development of different theoretical outlooks on argument by analogy while measuring the scope of its greater or lesser application to the aforementioned areas as a whole

Local Theories of Argument Dale Hample, 2021-03-25 Argumentation is often understood as a coherent set of Western theories birthed in Athens and developing throughout the Roman period the Middle Ages the Enlightenment and Renaissance and into the present century Ideas have been nuanced developed and revised but still the outline of argumentation theory has been recognizable for centuries or so it has seemed to Western scholars The 2019 Alta Conference on Argumentation co sponsored by the National Communication Association and the American Forensic Association aimed to question the generality of these intellectual traditions This resulting collection of essays deals with the possibility of having local theories of argument local to a particular time a particular kind of issue a particular place or a particular culture Many of the papers argue for reconsidering basic ideas about arguing to represent the uniqueness of some moment or location of discourse Other scholars are more comfortable with the Western traditions and find them congenial to the analysis of arguments that originate in discernibly distinct circumstances The papers represent different methodologies cover the experiences of different nations at different times examine varying sorts of argumentative events speeches court decisions food choices and sound explore particular personal identities and the issues highlighted by them and have different overall orientations to doing argumentation scholarship Considered together the essays do not generate one simple conclusion but they stimulate reflection about the particularity or generality of the experience of arguing and therefore the scope of our theories
