McIntyre, 2012-12-06 This section will consider the structure and function of muscle receptors as well as the central nervous system mechanisms with which they are concerned In volume I of this Handbook receptor mechanisms are discussed in detail Also the crustacean stretch receptor and the frog muscle spindle have been considered The present section will be concerned with vertebrate muscle receptors with an emphasis on mammals Muscle receptors provide interesting examples of specialized mechanoreceptors The muscle spindle is a striking case of a receptor which is regulated in its function by the central nervous system in efferent neurons Muscle receptors have long been known to play a crucial role in the reflex regulation of movement In recent years it has become apparent that these receptors are also important in sensory phenomena such as the perception of position and movement St Louis July 1974 c c HUNT Contents Chapter I The Morphology of Muscle Receptors By D BARKER With 99 Figures 1 Chapter II The Physiology of Muscle Receptors By C C HUNT With 21 Figures 191 Chapter III Central Actions of Impulses in Muscle Afferent Fibres By A K McINTYRE With 8 Figures 235 Author Index 289 Subject Index 299 List of Contributors BARKER David Department of Zoology University of Durham Science Laboratories South Road Durham DH1 3LE Great Britain HUNT Carlton C Department of Physiology and Biophysics Washington University School of Medicine 660 South Euclid Avenue St Louis Mo 63110 USA McINTYRE A K

[Alpha and Gamma Motor Systems](#) R. Durbaba,M.H. Gladden,Anthony Taylor,2012-12-06 The Sherrington School of Physiology at St Thomas Hospital provided a natural venue for four days of enthusiastic debate on Sherrington's Final Common Path the alpha motoneurone and related matters Sherrington himself held a lectureship at St Thomas just over a century ago The occasion was a happy one Most participants already knew each other the topics were familiar the discussion was vigorous and critical but without personal rancor The program had set out to encourage debate with critiques both of the oral papers and the posters their inclusion in the present volume helps to show where we are standing on rock rather than sand In spite of a venerable history some surprisingly simple matters remain controversial such

as the information content of the signals from the Golgi tendon organs To those working on alpha and gamma motoneurons and their control this volume provides an essential up dating Classical problems continue to be attacked on a broad front advance is steady and continuous a swelling tide rather than a sudden view of the summit But in some sectors the difficulties are so great that to the outsider little might seem to change the same battles continuing but even here the terms of debate change and consensus develops Other branches of biology claim breakthrough upon breakthrough from the routine application of the new technologies so we have to be the first to ask whether our classical approach to science can still be justified

*Skeletal Muscle* Henning Schmalbruch,2012-12-06 This volume is intended to cover research in the field of muscle morphology since publication of the previous edition by Haggquist in 1956 The development of new techniques coupled with an intensified interest in muscle has resulted in a vast literature which no single person could review especially within the limitations of one volume When I accepted the flattering offer to write a new edition I quickly abandoned any hope of a comprehensive review Instead I tried to consider within my limits those lines of research which I believe to be important for the understanding of mammalian and ultimately human muscles under normal experimental and pathological conditions It would be naive to suggest that muscle can be adequately described in purely morphological aspects I would characterize the results of my effort as muscle as seen with the eyes of a morphologist It gives me pleasure to acknowledge the help of several colleagues who read and commented on drafts of individual chapters Dr Brenda Eisenberg Chicago Dr Else Nygaard Copenhagen Dr Stefano Schiaffino Padova Dr Michael Sjostrom Umea Dr Lars Erik Thornell Umea None of these individuals

can be held responsible for any error or obscurity that persists Indeed without their assistance there would have been more I also thank those colleagues who allowed me to include their published and unpublished material their names and also those of the publishers who kindly granted copyright permission are given in the individual figure captions RESEARCH IN MUSCLE DEVELOPMENT AND THE MUSCLE SPINDLE : PROCEEDINGS OF AN INTERNAT. Pollak,J.W. Lee,2013-03-09 The papers assembled in this volume are based on the symposium on The Biochemistry of Gene Expression in Higher Organisms which was held at the University of Sydney from May 14 19 1972 Many symposia have been held on the control of gene expression in prokaryotes but to date considerably less attention has been paid to eukaryotic organisms It has been appreciated only recently that some of the information gained from the study of prokaryotes is directly applicable to eukaryotes however it is now realized that the principles of the control mechanisms of gene expression in these two classes of organism differ considerably This symposium was organized in an effort to bring together workers from widely different fields concerned with gene expression with the aim of circumscribing the current concepts and speculating on future developments in studies on the mechanisms which control and modulate gene expression in the widest sense in eukaryotes This volume contains all the 36 papers presented at the symposium In a few instances the sequence of contributions has been changed to provide the reader with a more logical presentation In addition three papers which were not actually presented at the symposium have been included in this volume These three papers were not read because last minute hitches prevented speakers from attending
