economics research on unemployment and economic cycles and research on institutional environments This has allowed the authors to develop a unified framework that extends sociological models of income inequality and status attainment or allocation to the explanation of non economic health related outcomes of work Using a multi level structural model this timely and comprehensive volume explores what is stressful about work and why specifically address these and questions and more What characteristics of jobs are the most stressful what characteristics reduce stress Why do work organizations structure some jobs to be highly stressful and some jobs to be much less stressful Is work in a bureaucracy really more stressful How is occupational status occupational power and authority related to the stressfulness of work How does the segmentation of labor markets by occupation industry race gender and citizenship maintain disparities in job stress Why is unemployment stressful to workers who don t lose their jobs How do public policies on employment status collective bargaining overtime affect job stress Is work in the current Post neo Fordist era of work more or less stressful than work during the Fordist era In addition to providing a new way to understand the sociological causes of job stress and mentalhealth the model that the authors provide has broad applications to further study of this important area of research This volume will be of key interest to sociologists and other researchers studying social stratification public health political economy institutional and organizational theory
