fundamental change in the way we view disease processes such as sepsis shock acute lung injury and traumatic brain injury Pediatric intensivists have been both witness to and active participants in bringing about these changes As the understanding of the pathogenesis of these diseases reaches the cellular and molecular levels the gap between critical care medicine and molecular biology will disappear It is imperative that all physicians caring for critically ill children in this new era have a thorough understanding of the applicability of molecular biology to the care of these patients at the bedside in order to keep up with the rapidly evolving field of critical care medicine To the same extent the practice of critical care medicine is in the midst of fundamental change In keeping with the Institute of Medicine's report Crossing the Quality Chasm the care of critically ill and injured children needs to be safe evidence based equitable efficient timely and family centered 1 2 In the following pages these changes in our specialty are discussed in greater scope and detail offering the reader fresh insight into not only where we came from but also where we are going as a specialty
