Ganjoo, 2013-07-12 A number of scar revision techniques can be utilized to treat specific types of scars in combination with each other or with adjunctive therapies to achieve optimal results Pathological conditions like hypertrophic scars and keloids are still challenging Though a number of therapies exist to treat keloids such as intralesional steroids and anti metabolites

cryosurgery to name a few none are definitive in treatment Understanding the molecular basis of keloids may lead to development of new therapies Striae also known as stretch marks are extremely common disfiguring and a real challenge to treat Management of striae is a neglected field of research Except for topical retinoids the efficacy satisfactorily Current treatment options include chemical peels lasers and collagen induction therapy with a tendency towards active intervention However studies are necessary to determine treatment strategies which produce results that are effective with minimal adverse effects Post acne scarring is one of the most common causes of facial scars causing considerable cosmetic disability Acne is a common skin disorder unfortunately affecting a large number of teenagers Usually patients have a combination of different types of scars hence no single modality is useful A combination of procedures is generally required for a satisfactory cosmetic outcome The use of fractional lasers is gaining importance as it is a minimally invasive procedure as compared to aggressive resurfacing procedures of the past Collagen induction therapy is another promising technique Today patients are also getting up to date information about the various modalities available for scar treatment through media such as magazines advertisements and internet However exaggerated advertisements and information from nonprofessional sources particularly with regard to lasers can influence patient expectations and result in unrealistic expectations Patients need to understand that deep scars cannot be eliminated fully and can only be improved They usually have high expectations from procedural techniques Proper counseling is extremely important for a happy and satisfactory outcome Current innovations and techniques in scar prevention and management and increasing use of minimally invasive surgeries are paving the way toward smoother less noticeable scars Every surgeon practicing aesthetics should be well versed with modalities of scar management and this is the aim of this clinical update

Stocum, 2014-07-08 Regeneration the homeostatic ability to maintain tissue structure in the face of normal cell turnover or loss of tissue damaged by trauma or disease is an essential developmental process that continues throughout life As recently as a decade ago any serious discussion of the possibility of regeneration becoming a practical medical tool in the near future had the air of science fiction or over optimistic speculation The term regenerative medicine was certainly on many lips but few actually expected to soon see it applied in a clinical setting A tidal wave of discovery has changed that and investigating the cellular mechanisms of natural regeneration has become one of the hottest topics in developmental biology and biomedicine in general Many researchers entering the field find that the regeneration literature is still quite diffuse perhaps owing to the disparate biological systems that have been the object of study including hydra planaria newts axolotls and more recently several mouse strains The volume editors believe that an attempt to organize or systematize the literature is long overdue In this volume respected experts highlight the latest findings in vertebrate including mammals wound healing and regeneration They present eleven reviews that cover a wide range of topics from wound repair and its relationship to regeneration through systems including lenticular neural and musculoskeletal tissues and limbs to epigenetics and the role of the cell cycle

Nuclear reprogramming and cellular plasticity which open the door for potential regenerative medical therapies for injury and degenerative disease are recurring themes throughout the book We are all now part of the regeneration revolution
