Rao, 2013-10-22 The Finite Element Method in Engineering introduces the various aspects of finite element method as applied to engineering problems in a systematic manner. It details the development of each of the techniques and ideas from basic principles. New concepts are illustrated with simple examples wherever possible. Several Fortran computer programs are given with example applications to serve the following purposes to enable the reader to understand the computer implementation of the theory developed to solve specific problems and to indicate procedure for the development of computer programs for solving any other problem in the same area. The book begins with an overview of the finite element method. This is followed by separate chapters on numerical solution of various types of finite element equations, the general procedure of finite element analysis, the development of higher order and isoparametric elements, and the application of finite element method for static and dynamic solid and structural mechanics problems like frames, plates, and solid bodies. Subsequent chapters deal with the solution of one, two, and three dimensional steady state and transient heat transfer problems, the finite element solution of fluid mechanics problems, and additional applications and generalization of the finite element method. **Thermal Stresses in Severe Environments** D. P. Hasselman, 2012-12-06 This volume of Thermal Stresses in Materials and Structures in Severe Thermal Environments constitutes the proceedings of an international conference held at Virginia Polytechnic Institute and State University in Blacksburg, Virginia, USA, on March 19, 20, and 21, 1980. The purpose of the conference was to bring together experts in the areas of heat transfer, theoretical and applied mechanics, and materials science and engineering with a common interest in the highly interdisciplinary nature of the thermal stress problem. It is the hope of the program chairmen that the resulting interaction has led to a greater understanding of the underlying principles of the thermal stress problem and to an improved design and selection of materials for structures subjected to high thermal stresses. The program chairmen gratefully acknowledge the financial assistance for the conference provided by the Department of Energy, the National Science Foundation, the Army Research Office, and the Office of Naval Research, as well as the Departments of Engineering Science and Mechanics and Materials Engineering at Virginia Polytechnic Institute and State University. A number of professional societies also provided mailing lists for the program at no nominal cost. The Associate Director, Mr. R. J. Harshberger, and his staff at the Conference Center for Continuing Education at VPI and SU should be recognized especially for their coordination of the conference activities, lunches, and banquet. Provost John D. Wilson gave a most enlightening and provocative after dinner speech.
