**Digital and Analog Fiber Optic Communications for CATV and FTTx Applications** Avigdor Brillant, 2008 This book is intended to provide a step by step guide to all design aspects and tradeoffs from theory to application for fiber optics transceiver electronics Presenting a compendium of information in a structured way this book enables the engineer to develop a methodical design approach a deep understanding of specifications parameters and the reasons behind them as well as their effects and consequences on system performance which are essential for proper component design Further a

fundamental understanding of RF digital circuit design and linear and nonlinear phenomena is important in order to achieve the desired performance levels Becoming familiar with solid state devices and passives used to build optical receivers and transmitters is also important so one can effectively overcome design limitations **The Theory of the Moiré**

**Phenomenon** Isaac Amidror, 2009-03-15 Since the first edition of this book was published several new developments have been made in the field of the moir theory The most important of these concern new results that have recently been obtained on moir effects between correlated aperiodic or random structures a subject that was completely absent in the first edition and which appears now for the first time in a second separate volume This also explains the change in the title of the present volume which now includes the subtitle Volume I Periodic Layers This subtitle has been added to clearly distinguish the present volume from its new companion which is subtitled Volume II Aperiodic Layers It should be noted however that the new subtitle of the present volume may be somewhat misleading since this book also treats in Chapters 10 and 11 moir effects between repetitive layers which are in fact geometric transformations of periodic layers that are generally no longer periodic in themselves The most suitable subtitle for the present volume would therefore have been Periodic or Repetitive Layers but in the end we have decided on the shorter version **Spectroscopy**, 1976-09-17 This volume attempts to cover

the entire subject of spectroscopy from pair production in the gamma ray region to dielectric loss in the low radio frequency region Defining spectroscopy as the study of the emission and absorption of electromagnetic radiation by matter this book presents a general theory that is applicable throughout the entire range of the electromagnetic spectrum and show how the theory can be applied in gaining knowledge of the structure of matter from experimental measurements in all spectral regions The book is intended for graduate students interested in acquiring a general knowledge of spectroscopy for spectroscopists interested in acquiring knowledge of spectroscopy outside the range of their own specialties and for other physicists and chemists who may be curious as to what those spectroscopists have been up to and as to what spectroscopists find so interesting about their own work Systems & Control T. Dougherty, 1995 The primary function of this book is to

serve as a textbook on linear systems and control It is aimed principally at undergraduates taking courses in Electrical Engineering Electronics or Mechanical Engineering who are in the penultimate and final years of an Honours degree Because the text is closely integrated with the use of a widely available software package it will also be of interest and use to a more expert audience with a control background but who may not be familiar with these invaluable tools Finally it may be of use to others who may not be control specialists but who need to acquire a background of control for other purposes Some of the material has been used successfully for such a purpose with an M Sc programme for Power Engineering students
