## **Science Without Numbers A Defence Of Nominalism:**

**Science Without Numbers** Hartry H. Field, 2016 Science Without Numbers caused a stir in 1980 with its bold nominalist approach to the philosophy of mathematics and science It has been unavailable for twenty years and is now reissued in a revised edition with a substantial new preface presenting the author's current views and responses to the issues raised in subsequent debate

**Science Without Numbers** Hartry H. Field, 1980 The Description for this book Science Without Numbers The Defence of Nominalism will be forthcoming

Science Without Numbers Hartry Field, 2015-08-11 According to the doctrine of nominalism abstract entities such as numbers functions and sets do not exist The problem this normally poses for a description of the physical world is as follows any such description must include a physical theory physical theories are assumed to require mathematics and mathematics is replete with references to abstract entities How then can nominalism reasonably be maintained In answer Hartry Field shows how abstract entities ultimately are dispensable in describing the physical world and that indeed we can do science without numbers The author also argues that despite the ultimate dispensability of mathematical entities mathematics remains useful and that its usefulness can be explained by the nominalist The explanation of the utility of mathematics does not presuppose that mathematics is true but only that it is consistent The argument that the nominalist can freely use mathematics in certain contexts without assuming it to be true appears early on and it first seems to license only a quite limited use of mathematics But when combined with the later argument that abstract entities ultimately are dispensable in physical theories the conclusion emerges that even the most sophisticated applications of mathematics depend only on the assumption that mathematics is consistent and not on the assumption that it is true Originally published in 2050 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

*God Over All* William Lane Craig, 2016 The book is a defense of God's unique status as the creator of all things apart from himself in the face of the challenge of mathematical Platonism It is based on William Lane Craig's Cadbury Lectures given at the University of Birmingham in March 2015

*A Minimalist Ontology of the Natural World* Michael Esfeld, Dirk-Andre Deckert, 2017-10-25 This book seeks to work out which commitments are minimally sufficient to obtain an ontology of the natural world that matches all of today's well established physical theories We propose an ontology of the natural world that is defined only by two axioms 1 There are distance relations that individuate simple objects namely matter points 2 The matter points are permanent with the distances between them changing Everything else comes in as a means to represent the change in the distance relations in a manner that is both as simple and as informative as possible The book works this minimalist ontology

out in philosophical as well as mathematical terms and shows how one can understand classical mechanics quantum field theory and relativistic physics on the basis of this ontology Along the way we seek to achieve four subsidiary aims a to make a case for a holistic individuation of the basic objects ontic structural realism b to work out a new version of Humeanism dubbed Super Humeanism that does without natural properties c to set out an ontology of quantum physics that is an alternative to quantum state realism and that avoids any ontological dualism of particles and fields d to vindicate a relationalist ontology based on point objects also in the domain of relativistic physics

**Explanation in Ethics and Mathematics** Uri D. Leibowitz, Neil Sinclair, 2016 How far should our realism extend For many years philosophers of mathematics and philosophers of ethics have worked independently to address the question of how best to understand the entities apparently referred to by mathematical and ethical talk But the similarities between their endeavours are not often emphasised This book provides that emphasis In particular it focuses on two types of argumentative strategies that have been deployed in both areas The first debunking arguments aims to put pressure on realism by emphasising the seeming redundancy of mathematical or moral entities when it comes to explaining our judgements In the moral realm this challenge has been made by Gilbert Harman and Sharon Street in the mathematical realm it is known as the Benacerraf Field problem The second strategy indispensability arguments aims to provide support for realism by emphasising the seeming intellectual indispensability of mathematical or moral entities for example when constructing good explanatory theories This strategy is associated with Quine and Putnam in mathematics and with Nicholas Sturgeon and David Enoch in ethics Explanation in Ethics and Mathematics addresses these issues through an explicitly comparative methodology which we call the companions in illumination approach By considering how argumentative strategies in the philosophy of mathematics might apply to the philosophy of ethics and vice versa the papers collected here break new ground in both areas For good measure two further companions for illumination are also broached the philosophy of chance and the philosophy of religion Collectively these comparisons light up new questions arguments and problems of interest to scholars interested in realism in any area

**A Theory of Causation in the Social and Biological Sciences** A. **Abstract Objects** David Liggins, 2024-02-28 Philosophers often debate the existence of such things as numbers and propositions and say that if these objects exist they are abstract But what does it mean to call something abstract And do we have good reason to believe in the existence of abstract objects This Element addresses those questions putting newcomers to these debates in a position to understand what they concern and what are the most influential considerations at work in this area of metaphysics It also provides advice on which lines of discussion promise to be the most fruitful

**Art and Abstract Objects** Christy Mag Uidhir, 2013-01-17 Art and Abstract Objects presents a lively philosophical exchange between the philosophy of art and the core areas of philosophy The standard way of thinking about non repeatable single instance artworks such as paintings drawings and non cast sculpture is that they are concrete i e material causally efficacious located in space and time Da Vinci's Mona Lisa is currently located in Paris Richard Serra's Tilted Arc is 73 tonnes of solid steel Johannes Vermeer's The Concert was stolen in 1990 and remains missing Michaelangelo's David was attacked with a hammer in 1991 By contrast the standard way of thinking about repeatable multiple instance artworks such as novels poems plays operas films symphonies is that they must be abstract i e immaterial causally inert outside space time consider the current location of Melville's Moby Dick the weight of Yeats Sailing to Byzantium or how one might go about stealing Puccini's La Bohème or vandalizing Mozart's Piano Concerto No 9 Although novels poems and symphonies may appear radically unlike stock abstract objects such as numbers sets and propositions most philosophers of art think that for the basic intuitions practices and conventions surrounding such works to be preserved repeatable artworks must be abstracta This volume examines how philosophical enquiry into art might itself productively inform or be productively informed by enquiry into abstracta taking place within not just metaphysics but also the philosophy of mathematics epistemology philosophy of science and philosophy of mind and language While the contributors chiefly focus on the relationship between philosophy of art and contemporary metaphysics with respect to the overlap issue of abstracta they provide a methodological blueprint from which scholars working both within and beyond philosophy of art can begin building responsible mutually informative and productive relationships between their respective fields

**Constructive Empiricism** P. Dicken, 2010-07-16 Constructive empiricism is not just a view regarding the aim of science it is also a view regarding the epistemological framework in which one should debate the aim of science This is the focus of this book not with scientific truth but with how one should argue about scientific truth

**Mathematics and Reality** Mary Leng, 2010-04-22 Mary Leng offers a defense of

mathematical fictionalism according to which we have no reason to believe that there are any mathematical objects Perhaps the most pressing challenge to mathematical fictionalism is the indispensability argument for the truth of our mathematical theories and therefore for the existence of the mathematical objects posited by those theories According to this argument if we have reason to believe anything we have reason to believe that the claims of our best empirical theories are at least approximately true But since claims whose truth would require the existence of mathematical objects are indispensable in formulating our best empirical theories it follows that we have good reason to believe in the mathematical objects posited by those mathematical theories used in empirical science and therefore to believe that the mathematical theories utilized in empirical science are true Previous responses to the indispensability argument have focussed on arguing that mathematical assumptions can be dispensed with in formulating our empirical theories Leng by contrast offers an account of the role of mathematics in empirical science according to which the successful use of mathematics in formulating our empirical theories need not rely on the truth of the mathematics utilized

**Existential Inertia and Classical Theistic Proofs** Joseph C. Schmid, Daniel J. Linford, 2022-11-29 This book critically assesses arguments for the existence of the God of classical theism develops an innovative account of objects persistence and defends new arguments against classical theism The authors engage the following classical theistic proofs Aquinas's First Way Aquinas's De Ente argument and Feser's Aristotelian Neo Platonic Augustinian Thomistic and Rationalist proofs The authors also provide the first systematic treatment of the existential inertia thesis By connecting the thesis to relativity theory and recent developments in the philosophy of physics and by developing a variety of novel existential inertia friendly explanations of persistence they mount a formidable new case against classical theistic proofs Finally they defend new arguments against classical theism based on abstract objects and changing divine knowledge The text appeals to students researchers and others interested in classical theistic proofs the existence and nature of God and the ultimate explanations of persistence change and contingency

**Empiricism and Philosophy of Physics** Lars-Göran Johansson, 2021-01-13 This book presents a thoroughly empiricist account of physics By providing an overview of the development of empiricism from Ockham to van Fraassen the book lays the foundation for its own version of empiricism Empiricism for the author consists of three ideas nominalism i.e. dismissing second order quantification as unnecessary epistemological naturalism and viewing classification of things in natural kinds as a human habit not in need for any justification The book offers views on the realism antirealism debate as well as on the individuation of theories as a thoroughly neglected aspect of underdetermination The book next discusses a broad range of topics including the predicates body spatial distance and time interval the ontology of electromagnetism propensities the measurement problem and other philosophical issues in quantum theory Discussions about the direction of time and about string theory make up the final part of the book

**An Aristotelian Realist Philosophy of Mathematics** J. Franklin, 2014-04-09 Mathematics is as much a science of the real world as biology is It is the science of the world's quantitative aspects such as

ratio and structural or patterned aspects such as symmetry The book develops a complete philosophy of mathematics that contrasts with the usual Platonist and nominalist options
