Chen, 1996-03-01 This book re examines the nature of early Chinese work in natural science on the basis of original records analysis and artifacts discovered in recent decades by archaeological explorations of China s past It presents a concise account of early scientific ideas and thoughts of nature and their effect on the development of natural science It is suggested that the traditional characterization of early Chinese work in natural science requires substantial modification The absence of early Chinese participation in the development of modern science is not as commonly assumed a consequence of lacking early scientific tradition in ancient China It is argued that the concept of inhibitive factors is dubious without taking their dynamical relationships into account and that socio economical and political influence has to be considered when seeking answers to the major setbacks in science and technology in China The book also shows that there is no basis for the claims saying that acoustics and astronomy in China have their roots in Babylon *Industrial Arts Index*, 1922 *Quarterly Cumulative Index to Current Medical Literature.
