Sciences In The European Periphery During The Enlightenment:

The Sciences in the European Periphery During the Enlightenment Kostas Gavroglu, 1999-01-31 The articles in this volume of ARCHIMEDES examine particular cases of reception in ways that emphasize pressing historiographical and methodological issues Such issues arise in any consideration of the transmission and appropriation of scientific concepts and practices that originated in the several centers of European learning subsequently to appear often in considerably altered guise in regions at the European periphery They discuss the transfer of new scientific ideas the mechanisms of their introduction and the processes of their appropriation at the periphery The themes that frame the discussions of the complex relationship between the origination of ideas and their reception include the ways in which the ideas of the Scientific Revolution were introduced the particularities of their expression in each place the specific forms of resistance encountered by these new ideas the extent to which such expression and resistance displays national characteristics the procedures through which new ways of dealing with nature were made legitimate and the commonalities and differences between the methods developed by scholars for handling scientific issues Universities and Science in the Early Modern Period Mordechai Feingold, Victor Navarro-Brotons, 2006-10-03 This book includes most of the contributions presented at a conference on Universities and Science in the Early Modern Period held in 1999 in Valencia Spain The conference was part of the Five Centuries of the Life of the University of Valencia Cinc Segles celebrations and from the outset we had the generous support of the Patronato Foundation overseeing the events In recent decades as a result of a renewed attention to the institutional political social and cultural context of scientific activity we have witnessed a reappraisal of the role of the universities in the construction and development of early modern science In essence the following conclusions have been reached 1 the attitudes regarding scientific progress or novelty differed from country to country and follow different trajectories in the course of the early modern period 2 institutions of higher learning were the main centers of education for most scientists 3 although the universities were sometimes slow to assimilate new scientific knowledge when they did so it helped not only to remove the suspicion that the new science was intellectually subversive but also to make science a respectable and even prestigious activity 4 the universities gave the scientific movement considerable material support in the form of research facilities such as anatomical theaters botanical gardens and expensive instruments 5 the universities provided professional employment and a means of support to many scientists and 6 although the relations among the universities and the academies or scientific societies were sometimes antagonistic the two types of institutions often worked together in harmony performing complementary rather than competing functions moreover individuals moved from one institution to another as did knowledge methods and scientific practices *The Sciences in the European Periphery During the Enlightenment* Kostas Gavroglou, 1999 Beyond Borders Néstor Herrán, Tayra Lanuza-Navarro, Josep Simon, 2009-05-27 How does scientific knowledge circulate Does scientific communication shape the making of science Is the

making of science a national endeavour or does it have an international or transnational dimension Are teaching and research equally relevant in this endeavour How can history of science react to the challenges posed by the changing practices of science in historical context Beyond Borders is a book generated at the heart of these fundamental questions In the last decades the history of science has attained a high degree of disciplinary maturity and sophistication However perception of disciplinary crisis is apparent behind calls for the search of new big pictures and their implementation in teaching and communicating the history of science to wider audiences Temporal and narrative fragmentation are seen as major drawbacks hindering the development of the discipline In addition national linguistic and methodological division is increasingly afflicting its practice Like other areas in the humanities and in contrast to the sciences the history of science has nowadays a pronounced local character which clearly constrains its intellectual output Challenging this state of affairs is a major aim of this book which argues for a resolute call for intellectual and methodological pluralism and internationalism Through a broad diversity of subjects periods and geographies covering from studies of sixteenth century astrological texts to contextual analysis of twentieth century X ray spectroscopy this collection of papers and historiographical essays offers a fresh overview of the field and its major questions Beyond Borders revisits five major topics in history of science namely the early modern map of knowledge pedagogy and science science popularization science and the nation and the geography of scientific centres and peripheries Engaging with a broad diversity of historiographical and methodological approaches in an international perspective Beyond Borders is a rich and plural manifesto contributing to the reflective appraisal of history of science as a discipline Latin American and Iberian Perspectives on Literature and Medicine Patricia

Novillo-Corvalán, 2015-06-05 This is the first study to examine the representation of illness disability and cultural pathologies in modern and contemporary Iberian and Latin American literature Innovative and interdisciplinary the collection situates medicine as an important and largely overlooked discourse in these literatures while also considering the social political religious symbolic and metaphysical dimensions underpinning illness Investigating how Hispanic and Lusophone writers have reflected on the personal and cultural effects of illness it raises central questions about how medical discourses cultural pathologies and the art of healing in general are represented Essays pay particular attention to the ways in which these interdisciplinary dialogues chart new directions in the study of Hispanic and Lusophone cultures and emerging disciplines such as the medical humanities Addressing a wide range of themes and subjects including bioethics neuroscience psychosurgery medical technologies Darwinian evolution indigenous herbal medicine the rising genre of the pathography and the illness as metaphor trope the collection engages with the discourses of cultural studies gender studies disability studies comparative literature and the medical humanities This book enriches and stimulates scholarship in these areas by showing how much we still have to gain from interdisciplinary studies working at the intersections between the humanities and the sciences Communicating Physics Josep Simon, 2015-10-06 The textbooks written by Adolphe Ganot played a major role in

shaping the way physics was taught in schools Simon s Franco British case study looks at the role of two of Ganot s books The study is novel for its international comparison of 19th century physics and for its emphasis on the communication of science rather than on the science itself

Medical Cultures of the Early Modern Spanish Empire John Slater,Maríaluz López-Terrada,José Pardo-Tomás,2016-04-29 Early modern Spain was a global empire in which a startling variety of medical cultures came into contact and occasionally conflict with one another Spanish soldiers ambassadors missionaries sailors and emigrants of all sorts carried with them to the farthest reaches of the monarchy their own ideas about sickness and health These ideas were in turn influenced by local cultures This volume tells the story of encounters among medical cultures in the early modern Spanish empire The twelve chapters draw upon a wide variety of sources ranging from drama poetry and sermons to broadsheets travel accounts chronicles and Inquisitorial documents and it surveys a tremendous regional scope from Mexico to the Canary Islands the Iberian Peninsula Italy and Germany Together these essays propose a new interpretation of the circulation reception appropriation and elaboration of ideas and practices related to sickness and health sex monstrosity and death in a historical moment marked by continuous cross pollination among institutions and populations with a decided stake in the functioning and control of the human body Ultimately the volume discloses how medical cultures provided demographic analytical and even geographic tools that constituted a particular kind of map of knowledge and practice upon which were plotted the local utilities of pharmacological discoveries cures for social unrest or decline spaces for political and institutional struggle and evolving understandings of monstrousness and normativity **Medical Cultures of the Early Modern Spanish Empire** puts the history of early modern Spanish medicine on a new footing in the English speaking world

Proceedings of the Twelfth British Conference on Judeo-Spanish Studies, 24-26 June, 2001 Hilary Pomeroy, Michael Alpert, 2021-09-20 This volume contains eighteen papers fully accompanied by notes bibliography and an index delivered at the twelfth British Judeo Spanish Studies Conference held in London in the summer of 2001 It covers a wide range of current research by scholars in the United States Israel Canada Brazil Greece and Spain into the history and contemporary use of the Judeo Spanish language into theatre poetry and other literature produced in pre Expulsion Spain by conversos returning to Judaism in the 17th and 18th centuries in London and Amsterdam and in the major centres of Sephardi Jews in Greece and Turkey up to the present time as well as into recent Judeo Spanish history **The Politics of Chemistry** Agustí Nieto-Galan, 2019-08-22 Agust Nieto Galan argues that chemistry in the twentieth century was deeply and profoundly political Far from existing in a distinct public sphere chemical knowledge was applied in ways that created strong links with industrial and military projects and national rivalries and international endeavours that materially shaped the living conditions of millions of citizens It is within this framework that Nieto Galan analyses how Spanish chemists became powerful ideological agents in different political contexts from liberal to dictatorial regimes throughout the century He unveils chemists position of power in Spain their place in international scientific networks and their engagement in fierce ideological battles in an age of extremes Shared discourses between chemistry and liberalism war totalitarianism religion and diplomacy he argues led to advancements in both fields The Industrial Revolution William J. Ashworth, 2017-01-26

The British Industrial Revolution has long been seen as the spark for modern global industrialization and sustained economic growth. Indeed the origins of economic history as a discipline lie in 19th century European and North American attempts to understand the foundation of this process. In this book William J Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular he explores the role of State regulation and protectionism in nurturing Britain's negligible early manufacturing base. Taking a long view from the mid 17th century through to the 19th century the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution and one that places it firmly within a global context showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history and will be essential reading for anyone interested in global and comparative economic history and the history of globalization.

Lenses and Waves Fokko Jan Dijksterhuis, 2004-09-03. In 1690 Christiaan Huygens (1629-1695) published *Traité de la Lumière* containing his renowned wave theory of light. It is considered a landmark in seventeenth century science for the way Huygens mathematized the corpuscular nature of light and his probabilistic conception of natural knowledge. This book discusses the development of Huygens wave theory reconstructing the winding road that eventually led to *Traité de la Lumière*. For the first time the full range of manuscript sources is taken into account. In addition the development of Huygens' thinking on the nature of light is put in the context of his optics as a whole which was dominated by his lifelong pursuit of theoretical and practical dioptrics. In so doing this book offers the first account of the development of Huygens' mathematical analysis of lenses and telescopes and its significance for the origin of the wave theory of light. As Huygens applied his mathematical proficiency to practical issues pertaining to telescopes including trying to design a perfect telescope by means of mathematical theory his dioptrics is significant for our understanding of seventeenth century relations between theory and practice. With this full account of Huygens' optics this book sheds new light on the history of seventeenth century optics and the rise of the new mathematical sciences as well as Huygens' oeuvre as a whole. Students of the history of optics of early mathematical physics and the Scientific Revolution will find this book enlightening.

Society and Economy in Egypt and the Eastern Mediterranean, 1600-1900 Raouf Abbas, Nelly Hanna, 2005-11-01. In his long academic career historian Andr Raymond has been one of the foremost scholars of urban history in the Arab world and in particular of Cairo during the Ottoman period. His work was instrumental in changing orientalist views on the decline and stagnation of this region prior to the modern period and has inspired researchers across the academic spectrum. This diverse collection of studies by leading scholars in Egypt, the United States and Europe offers a wide selection of recent research in Ottoman era Egypt and the Middle East and serves as a fitting tribute to Raymond's own work. A main theme of this volume is the urban society and economy in Egypt and the eastern Mediterranean of the seventeenth to nineteenth centuries.

Wrong for the Right Reasons Jed Z. Buchwald, A. Franklin, 2006-03-30 The rapidity with which knowledge changes makes much of past science obsolete and often just wrong from the present's point of view We no longer think for example that heat is a material substance transferred from hot to cold bodies But is wrong science always or even usually bad science The essays in this volume argue by example that much of the past's rejected science wrong in retrospect though it may be and sometimes markedly so was nevertheless sound and exemplary of enduring standards that transcend the particularities of culture and locale
