

Writing a Scientific Explanation

Claim: The answer or conclusion to the scientific question.

For example: The Yankees are the best team in Major League Baseball.

Evidence: Scientific data that supports the claim.

For example: The Yankees have won the World Series more than any other team in history.

Reasoning: Explains why the evidence supports the claim, providing a logical connection between the evidence and the claim.

For example: The World Series is a championship to determine who is the best team in the major leagues. Because the Yankees have won this championship more times than any other team, they are the best team in Major League Baseball.

Scientific Explanation:

Scientific Explanation Philip Kitcher, Wesley C. Salmon, 1962-05-25 Scientific Explanation was first published in 1962 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions Is a new consensus emerging in the philosophy of science The nine distinguished contributors to this volume apply that question to the realm of scientific explanation and although their conclusions vary they agree in one respect there definitely was an old consensus Co editor Wesley Salmon's opening essay Four Decades of Scientific Explanation grounds the entire discussion His point of departure is the founding document of the old consensus a 1948 paper by Carl G Hempel and Paul Oppenheim Studies in the Logic of Explanation that set forth with remarkable clarity a mode of argument that came to be known as the deductive nomological model This approach holding that explanation does not move beyond the sphere of empirical knowledge remained dominant during the hegemony of logical empiricism from 1950 to 1975 Salmon traces in detail the rise and breakup of the old consensus and examines the degree to which there is if not a new consensus at least a kind of reconciliation on this issue among contemporary philosophers of science and clear agreement that science can indeed tell us why The other contributors in the order of their presentations are Peter Railton Matti Sintonen Paul W Humphreys David Papineau Nancy Cartwright James Woodward Merrilee H Salmon and Philip Kitcher

Four Decades of Scientific Explanation Wesley C. Salmon, 2006-06-15 As Aristotle stated scientific explanation is based on deductive argument yet Wesley C Salmon points out not all deductive arguments are qualified explanations The validity of the explanation must itself be examined Four Decades of Scientific Explanation provides a comprehensive account of the developments in scientific explanation that transpired in the last four decades of the twentieth century It continues to stand as the most comprehensive treatment of the writings on the subject during these years Building on the historic 1948 essay by Carl G Hempel and Paul Oppenheim Studies in the Logic of Explanation which introduced the deductive nomological D N model on which most work on scientific explanation was based for the following four decades Salmon goes beyond this model's inherent basis of describing empirical knowledge to tell us not only what but also why Salmon examines the predominant models in chronological order and describes their development refinement and criticism or rejection Four Decades of Scientific Explanation underscores the need for a consensus of approach and ongoing evaluations of methodology in scientific explanation with the goal of providing a better understanding of natural phenomena

Scientific Explanation Erik Weber, Jeroen Van Bouwel, Leen De Vreese, 2014-07-08 When scientist investigate why things happen they aim at giving an explanation But what does a scientific explanation look like In the first chapter Theories of Scientific Explanation of this book the milestones in the debate on how to characterize scientific explanations are exposed The second chapter How to Study Scientific Explanation scrutinizes the working method of three important philosophers of explanation Carl Hempel Philip Kitcher and Wesley Salmon and shows what went wrong Next it is

the responsibility of current philosophers of explanation to go on where Hempel, Kitcher and Salmon failed. However, we should go on in a clever way. We call this clever way the pragmatic approach to scientific explanation and clarify briefly what this approach consists in. The third chapter, A Toolbox for Describing and Evaluating Explanatory Practices, elaborates the pragmatic approach by presenting a toolbox for analysing scientific explanation. In the last chapter, Examples of Descriptions and Evaluations of Explanatory Practices, the approach is illustrated with real life examples of scientists aiming at explaining. This book can be used as a textbook for intermediate philosophy of science courses and is also valuable as suggested reading for introductory courses in philosophy of science. The way the book is set up makes it an excellent study and research guide for advanced MA and PhD students that work on the topic of scientific explanation. Finally, it is a handy source and reference book for senior researchers in the field of scientific explanations and more generally for all philosophers of science.

Scientific Explanation And Methodology Of Science Guichun Guo, Chuang Liu, 2014-03-27 This volume contains the contributed papers of invitees to SEMS 2012 who have also given talks at the conference. The invitees are experts in philosophy of science and technology from Asia besides China, Australia, Europe, Latin America, North America as well as from within China. The papers in this volume represent the latest work of each researcher in his or her expertise and as a result they give a good representation of the cutting edge researches in diverse areas in different parts of the world. **Language**

and scientific explanation Eran Asoulin, This book discusses the two main construals of the explanatory goals of semantic theories. The first externalist conception understands semantic theories in terms of a hermeneutic and interpretive explanatory project. The second internalist conception understands semantic theories in terms of the psychological mechanisms in virtue of which meanings are generated. It is argued that a fruitful scientific explanation is one that aims to uncover the underlying mechanisms in virtue of which the observable phenomena are made possible and that a scientific semantics should be doing just that. If this is the case then a scientific semantics is unlikely to be externalist for reasons having to do with the subject matter and form of externalist theories. It is argued that semantics construed hermeneutically is nevertheless a valuable explanatory project. **Scientific Explanation, Causality, and Agency** Majid D. Beni, 2024-07-12

This book draws on advances in computational neuroscience and theoretical biology to provide a clear and accessible agentive account of the nature of causality and scientific explanations. Instead of attempting to establish the elements of scientific explanation such as causality in a reality unadulterated by a human perspective, this book relies on scientific facts about cognition to describe the structure of agency from a distinctly human perspective. The book draws on the Free Energy Principle to reinforce the agency theory of causality and extend it to an account of explanation as well. This principle not only provides a theoretical account of how self-organising systems engage with the causal structure of the environment but it also offers a viable notion of agency and is compatible with the projectivist aspects of the agency theory. **Scientific Explanation, Causality and Agency** will appeal to researchers and advanced students working in philosophy of science, philosophy of
