Methods in the Social and Health Sciences Ted Palys,Chris Atchison,2021-02-03 Research Methods in the Social and

Health Sciences Research Decisions by Ted Palys and Chris Atchison gives students a thorough thoughtful and highly readable introduction to the entire research process from start to finish From its underlying premise that your research questions and objectives rather than any specific method should guide your research this book discusses each step of the research process from limiting the scope of a literature review to navigating ethical considerations to deciding which methods are best suited for finding answers to specific research questions to how to analyze data and present findings Readers are encouraged to think deeply about each step of the research process The book promotes this deliberation by discussing the strengths and limitations of different methods and Throughout the process the authors provide many examples from their own and student research sharing insights for research decisions arising from that experience Readers will develop the skills to create solid research questions perform literature reviews identify appropriate data sources and methods conduct research analyze and interpret data and translate the resulting knowledge generated from the research process to a wider audience all core parts of the research process by developing their knowledge and creating confidence in their own decision making skills After explaining the unique and often complementary strengths of qualitative and quantitative methods students focus on what methods are best suited for finding answers to the research questions that interest them Major types of research including experiments case studies surveys quasi experiments ethnographies focus groups participatory action research and archival studies all receive significant coverage The text illustrates how these methods are enhanced by integrating them with 21st century technologies and combining them in mixed methods projects Chapters on constructing a research proposal and disseminating research bookend the process with concrete steps in between to support students designing their own original research projects Study questions at the end of each chapter encourage students to think critically about the research process and how the choices a researcher makes will broaden or constrain what they can find By the end of the text social and health science students will feel confident in undertaking ethical and thoughtful research The Experimenting Society William N. Dunn,2024-11-01 An experimenting society is one

in which policy relevant knowledge is created It is then critically assessed and communicated in real life or natural settings with the aim of discovering new forms of public action to improve the problem solving capacities of society This latest volume of the distinguished Policy Studies Review Annual series probes evaluates and augments the work of Donald T Campbell on an experimental societies A basic assumption of this volume is that Campbell s perspective supplies a useful way to address increasingly complex and seemingly unmanageable problems facing the United States and other postindustrial societies This

volume is also the fourteenth festschrift to be issued by Transaction The focus is on theoretical as well as practical options for creating an experimenting society The rationale for this focus is the belief increasingly shared in the social science and policy making communities alike that researchers are essentially ignorant about how to solve many of the most pressing larger problems of this epoch This frank recognition of ignorance is a prerequisite of genuine scientific and professional curiosity without which knowledge gains are next to impossible to achieve and a precondition of an experimenting society Contributors to this original volume include Steve Fuller Duncan MacRae Jr Anthony S Bryk Robert A Beauregard Rita Mae Kelly Peter Gregware Burkart Holzner B Guy Peters C West Churchman and Ian I Mitroff Their multidisciplinary competencies are at once philosophical methodological and substantive They address such questions as What new or bold policies are available in domains such as education science and urban development In what ways can theoretical knowledge and practical action be fused so as to illuminate or alleviate policy problems What should be done Included are excerpts from Campbell s foundational paper The Experimenting Society as well as a recent article entitled Methods for the Experimenting Society which circulated in unpublished form for many years An unusual feature of the book is Campbell s responses to those who have addressed his work with candor and intelligence It will be of interest to policy studies scholars sociologists and social scientists

Theoretical Frameworks for Personal Relationships Ralph Erber, Robin Gilmour, 2013-06-17 The past two decades have seen a tremendous increase in research and scholarship devoted to personal relationships From rather scattered beginnings a recognizable and recognized field has emerged whose

strength and health is reflected in a wide array of indicators The editors contend that while the vigor of the field is often shown in the diversity and innovation of its research it is in the theoretical domain that they find evidence of a real coming of age This volume provides grounds for arguing that the diversity of theorizing is particularly healthy at this point The reader will notice that there is some diversity in terms of how much theory and research is contained in each chapter some are purely theoretical others are complemented by original pieces of empirical research The editors and contributors are from different countries another way in which the diversity of this book manifests itself The variety of the frameworks presented are seen as a strength as building on established strengths elsewhere to feed into relationship research and enhance its vitality Each chapter makes its own contribution to thinking and research about personal relationships As a group they add to an exciting collection that not only reflects a richness of conceptual backing but also a wide range of usable theoretical structures
