Engineering Simulations as Scientific Instruments: A Pattern Language Susan Stepney,Fiona A.C. Polack,2018-11-01 This book describes CoSMoS Complex Systems Modelling and Simulation a pattern based approach to engineering trustworthy simulations that are both scientifically useful to the researcher and scientifically credible to third parties This approach emphasises three key aspects to this development of a simulation as a scientific instrument the use of explicit models to capture the scientific domain the engineered simulation platform and the experimental results of running simulations the use of arguments to provide evidence that the scientific instrument is fit for purpose and the close co working of domain scientists and simulation software engineers In Part I the authors provide a managerial overview the rationale for and benefits of using the CoSMoS approach and a small worked example to demonstrate it in action Part II is a catalogue of the core patterns Part III lists more specific helper patterns showing possible routes to a simulation Finally Part IV documents CellBranch a substantial case study developed using the CoSMoS approach Building Scientific Apparatus John H. Nickel,Thomas Speck,2016-12-19 This book comprises a first survey of the Collaborative Research Center SFB TRR 141 Biological Design and Integrative Structures Analysis Simulation and Implementation in Architecture funded by the Deutsche Forschungsgemeinschaft since October 2014 The SFB TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of Tübingen The programme is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach During the last few decades computational methods have been introduced into all fields of science and technology In architecture they enable the geometric differentiation of building components and allow the fabrication of porous or fibre based materials with locally adjusted physical and chemical properties Recent developments in simulation technologies focus on multi scale models and the interplay of mechanical phenomena at various hierarchical levels In the natural sciences a multitude of quantitative methods covering diverse hierarchical levels have been introduced These advances in computational methods have opened a new era in biomimetics local differentiation at various scales the main feature of natural constructions can for the first time not only be analysed but to a certain extent also be transferred to building construction Computational methodologies enable the direct exchange of information between fields of science that until now have been widely separated As a result they lead to a new approach to biomimetic research which hopefully contributes to a more sustainable development in architecture and building construction
