The Scientific Image Bas C. van Fraassen, 1980 Psychiatry in the Scientific Image Dominic Murphy, 2012-01-13 An analysis of the understanding classification and explanation of mental disorders that proposes that psychiatry adopt the best practices of the cognitive sciences In Psychiatry in the Scientific Image Dominic Murphy looks at psychiatry from the viewpoint of analytic philosophy of science considering three issues how we should conceive of classify and explain mental illness If someone is said to have a mental illness what about it is mental What makes it an illness How might we explain and classify it A system of psychiatric classification settles these questions by distinguishing the mental illnesses and showing how they stand in relation to one another This book explores the philosophical issues raised by the project of explaining and classifying mental illness Murphy argues that the current literature on mental illness exemplified by the Diagnostic and Statistical Manual of Mental Disorders is an impediment to research it lacks a coherent concept of the mental and a satisfactory account of disorder and yields too much authority to commonsense thought about the mind He argues that the explanation of mental illness should meet the standards of good explanatory practice in the cognitive neurosciences and that the classification of mental disorders should group symptoms into conditions based on the causal structure of the normal mind Vitalism and the Scientific Image in Post-Enlightenment Life Science, 1800-2010 Sebastian Normandin, Charles T. Wolfe, 2013-06-15 Vitalism is understood as impacting the history of the life sciences medicine and philosophy representing an epistemological challenge to the dominance of mechanism over the last 200 years and partly revived with organicism in early theoretical biology The contributions in this volume portray the history of vitalism from the end of the Enlightenment to the modern day suggesting some reassessment of what it means both historically and conceptually As such it includes a wide range of material employing both historical and philosophical methodologies and it is divided fairly evenly between 19th and 20th century historical treatments and more contemporary analysis This volume presents a significant contribution to the current literature in the history and philosophy of science and the history of medicine *Introduction to the Science of Medical Imaging* R. Nick Bryan, 2010 This landmark text from world leading radiologist describes and illustrates how imaging techniques are created analyzed and applied to biomedical problems *Reading Scientific Images* Richard Mason, Tony Morphet, Sandra Prosalendis, 2006 Description based on content as of March 15 2006 **Science Images and Popular Images of the Sciences** Peter Weingart, Bernd Huppau, 2012-10-12 What is a popular image of science and where does it come from Little is known about the formation of science images and their transformation into popular images of science In this anthology contributions from two areas of expertise image theory and history and the sociology of the sciences explore techniques of constructing science images and transforming them into highly ambivalent images that represent the sciences The essays most of them with illustrations present evidence that popular images of the sciences are based upon abstract theories rather than facts and equally images of scientists are stimulated by imagination rather than historical knowledge

The Science of Subjectivity J. Neisser, 2015-04-02 Can neuroscience help explain the first person perspective The Science of Subjectivity delves into the nature of experience arguing that unconscious subjectivity is a reality Neisser identifies the biological roots of the first person showing how ancient systems of animal navigation enable creatures like us to cope with our worldly concerns Frontiers of Science and Philosophy Robert G. Colodny, 2010-11-23 Six essays by noted philosophers of science include the following topics explanation in science and in history philosophy and the scientific image of man psychoanalysis and parapsychology the conceptual basis of the biological sciences the nature of time and problems of microphysics Epistemology of Ordinary Knowledge Paolo Piccari, Mariano L. Bianca, 2015-11-25 Many philosophers reduce ordinary knowledge to sensory or more generally to perceptual knowledge which refers to entities belonging to the phenomonic world However ordinary knowledge is not only the result of sensory perceptual processes but also of non perceptual noetic contents that are present in any mind From an epistemological point of view ordinary knowledge is a form of knowledge that not only allows epistemic access to the world but also enables the formulation of models of it with different degrees of reliability Usually epistemologists focus their attention on scientific knowledge believing that ordinary knowledge does not or cannot have an epistemology for it is not in any way rigorous The papers collected in this volume analyse different aspects of ordinary knowledge and of its epistemology *Deepening Our Understanding of Wittgenstein* Michael Kober, 2006 This volume is of interest for anyone who aims at understanding the so called later or mature Wittgenstein Its contributions written by leading German speaking Wittgenstein scholars like Hans Sluga Hans Johann Glock Joachim Schulte Eike von Savigny and others provide deeper insights to seemingly well discussed topics such as family resemblance perspicuous representation religion or grammar or they explain in an eye opening fashion hitherto enigmatic expressions of Wittgenstein such as The pneumatic conception of thought PI 109 A mathematical proof must be surveyable RFM III 1 or On this a curious remark by H Newman OC 1 **Normativity, Lifeworld, and Science in Sellars' Synoptic Vision** Dionysis Christias, 2023-04-12 This book brings together the work of Wilfrid Sellars with work in 20th century phenomenology and 21st century speculative realism in order to think through one of the most important predicaments of contemporary philosophy As a result of the disenchantment of nature in late modernity philosophy has struggled to account for the place of persons construed as loci of normative authority and responsibility within a scientifically naturalistically described world bereft of values and norms The book argues that Sellars takes both the framework of persons and science seriously and thinks that this implies the need not just for reconciling the manifest and scientific images but for fusing them into one stereoscopic vision of reality and our place in it One of the main aims of this book is to address the issue of the form which a non alienated experience of ourselves in the world would take in the Sellarsian cryptic stereoscopic fusion of the manifest and the scientific image Through an extended discussion of Sellars relevance for contemporary continental philosophy and phenomenology in which his views on perception the commonsense lifeworld science normativity personhood morality and

process metaphysics are presented and extended the book sketches a novel view about what a stereoscopic fusion of the manifest and the scientific image would amount to at the level of our lifeworld experience Wilfrid Sellars Willem A. DeVries, 2014-12-18 Wilfrid Sellars 1912-89 has been called the most profound and systematic epistemological thinker of the twentieth century Robert Brandom He was in many respects ahead of his time and many of his innovations have become widely acknowledged for example his attack on the myth of the given his functionalist treatment of intentional states his proposal that psychological concepts are like theoretical concepts and his suggestion that attributions of knowledge locate the knower in the logical space of reasons However while many philosophers have begun to acknowledge Sellars's inspiration in their work their interpretation of his thought has not always been the most accurate His writings are difficult Individually his essays are complex and sometimes rely on doctrines and arguments he put forward elsewhere Each of his articles is deepened and strengthened by seeing it in its systematic context but he never wrote a unified exposition of his system which therefore has to be pieced together from numerous disparate sources Willem deVries addresses these difficulties specifically and provides a careful reading and remarkable overview of Sellars's systematic philosophy that will become the standard point of reference for all philosophers seeking to understand Sellars's hugely significant body of work

Pluralism in Philosophy John Kekes, 2000 This original and ambitious book aims to change how we think about good lives The perennial debates about good lives the disagreements caused by conflicts between scientific religious moral historical aesthetic and subjective modes of reflection typically end in an impasse This leaves the underlying problems of the meaning of life the possibility of free action the place of morality in good lives the art of life and human self understanding as intractable as they have ever been The way out of this impasse argues Kekes is to abandon the assumption shared by the contending parties that the solutions of these problems can be rational only if they apply universally to all lives in all contexts He believes that solutions may vary with lives and contexts and still be rational Kekes defends a pluralistic alternative to absolutism and relativism that will he holds take philosophy in a new and more productive direction *In the Mind But Not From There* Gean Moreno, 2019-07-16 Artists and critics explore the concept of Real Abstraction to help understand contemporary cultural production In the Mind But Not From There Real Abstraction and Contemporary Art considers how the Marxian concept of Real Abstraction originally developed by Alfred Sohn Rethel and recently updated by Alberto Toscano might help to define the economic social political and cultural complexities of our contemporary moment In doing so this volume brings together noted contemporary artists literary critics curators historians and social theorists who connect the concept of Real Abstraction with contemporary cultural production Theoretical and artistic contributions from Benjamin Noyes Paul Chan Joao Enxuto and Erica Love Marina Vishmidt Sven L ticken and many others help to map out the relationship between political economy and artistic production in the realm of contemporary globalized cultural exchange This anthology places economic and social analyses alongside creative projects and visual essays to consider the many angles of

contemporary art and how inquiry into the the production of abstraction through material and social processes can be used to better understand and hopefully change the conditions under which art is made seen and circulated today Published in collaboration with NAME publications *Structure and Thought* Daniel Sacilotto,2024-02-15 Offers a new understanding of representational cognition that synthesizes postwar philosophical approaches to the question of objective knowledge This study develops a novel account of representational cognition explaining how cognitive systems progressively come to map the structure of their worlds Daniel Sacilotto offers a constructive response to the critique of representation formulated throughout the post Kantian philosophical tradition Rather than a skepticism or idealism whereby thinking can grasp appearances but never the real representation Sacilotto shows is a constitutive dimension of cognitive systems creative capacity to know and intervene in the world of which they are part *Structure and Thought* Toward a Materialist Theory of Representational Cognition integrates various lines in contemporary philosophy including those often seen as incommensurable or in irresolvable tension with one another Sacilotto thus advances a productive synthesis of a materialist ambition to provide a creative and historical understanding of cognition with a structural realist account of representation He shows how the different forms of sensory discursive and theoretical mediation that characterize human cognition are conducive to a realist epistemological framework that explains how the possibility of knowledge about a mind independent reality is conceivable Science and Human Freedom Michael Esfeld,2020-01-21 This book argues for two claims firstly determinism in science does not infringe upon human free will because it is descriptive not prescriptive and secondly the very formulation testing and justification of scientific theories presupposes human free will and thereby persons as ontologically primitive The argument against predetermination is broadly Humean or more precisely Super Humean whereas that against naturalist reduction is in large Kantian drawing from Sellars on the scientific and the manifest image Thus whilst the book defends scientific realism against the confusion between fact and fake it also reveals why scientific theories laws and explanations cannot succeed in imposing norms for our actions upon us neither on the level of the individual nor on that of society Esfeld makes a strong case for an ontology of science that is minimally sufficient to explain our scientific and common sense knowledge not only removing the concern that the laws of nature are incompatible with human freedom but furthermore showing how our freedom is in fact a very presupposition for science *Nihil Unbound* R. Brassier,2007-11-08 This book pushes nihilism to its ultimate conclusion by linking revisionary naturalism in Anglo American philosophy with anti phenomenological realism in French philosophy Contrary to the post analytic consensus uniting Heidegger and Wittgenstein against scientism and scepticism this book links eliminative materialism and speculative realism **The Oxford Handbook of Philosophy of Science** Paul Humphreys,2016-08-04 This handbook provides both an overview of state of the art scholarship in philosophy of science as well as a guide to new directions in the discipline Section I contains broad overviews of the main lines of research and the state of established knowledge in six principal areas of the discipline including

computational physical biological psychological and social sciences as well as general philosophy of science Section II covers what are considered to be the traditional topics in the philosophy of science such as causation probability models ethics and values and explanation Section III identifies new areas of investigation that show promise of becoming important areas of research including the philosophy of astronomy and astrophysics data complexity theory neuroscience simulations post Kuhnian philosophy post empiricist epistemology and emergence Most chapters are accessible to scientifically educated non philosophers as well as to professional philosophers and the contributors all leading researchers in their field bring diverse perspectives from the North American European and Australasian research communities This volume is an essential resource for scholars and students

Wilfrid Sellars: Fusing the Images Jay F. Rosenberg, 2007-09-13 Wilfrid Sellars was and remains one of the most prominent and important twentieth century philosophers his writings played a key role in shaping the philosophical agenda in the English speaking world during the second half of the 20th century and they remain an active focus of intense critical attention and lively discussion Jay Rosenberg studied under Sellars in the early 1960s was continuously engaged with his work for over forty years and was widely regarded both as its foremost expositor and as one of Sellars truest disciples This was the last book that Rosenberg completed before his death at the age of only sixty five In it he gathers previously published studies of the central elements and implications of Sellars philosophy along with three new essays that further highlight and articulate the significance of his work both historically and with respect to contemporary debates

Ordinary Objects Amie Thomasson, 2007-06-11 Arguments that ordinary inanimate objects such as tables and chairs sticks and stones simply do not exist have become increasingly common and increasingly prominent Some are based on demands for parsimony or for a non arbitrary answer to the special composition question others arise from prohibitions against causal redundancy ontological vagueness or co location and others still come from worries that a common sense ontology would be a rival to a scientific one Until now little has been done to address these arguments in a unified and systematic way *Ordinary Objects* is designed to fill this gap
