*Science as Social Knowledge* Helen E. Longino,2020-03-31 Conventional wisdom has it that the sciences properly pursued constitute a pure value free method of obtaining knowledge about the natural world In light of the social and normative dimensions of many scientific debates Helen Longino finds that general accounts of scientific methodology cannot support this common belief Focusing on the notion of evidence the author argues that a methodology powerful enough to account for theories of any scope and depth is incapable of ruling out the influence of social and cultural values in the very structuring of knowledge The objectivity of scientific inquiry can nevertheless be maintained she proposes by understanding scientific inquiry as a social rather than an individual process Seeking to open a dialogue between methodologists and social critics of the sciences Longino develops this concept of contextual empiricism in an

analysis of research programs that have drawn criticism from feminists Examining theories of human evolution and of prenatal hormonal determination of gender role behavior of sex differences in cognition and of sexual orientation the author shows how assumptions laden with social values affect the description presentation and interpretation of data In particular Longino argues that research on the hormonal basis of sex differentiated behavior involves assumptions not only about gender relations but also about human action and agency She concludes with a discussion of the relation between science values and ideology based on the work of Habermas Foucault Keller and Haraway [Psychology, Humanism, and Scientific Inquiry](#) Hadley Cantril, Albert Hadley Cantril, [Scientific Research in Education](#) National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Scientific Principles for Education Research, 2002-03-28 Researchers historians and philosophers of science have debated the nature of scientific research in education for more than 100 years Recent enthusiasm for evidence based policy and practice in education now codified in the federal law that authorizes the bulk of elementary and secondary education programs have brought a new sense of urgency to understanding the ways in which the basic tenets of science manifest in the study of teaching learning and schooling Scientific Research in Education describes the similarities and differences between scientific inquiry in education and scientific inquiry in other fields and disciplines and provides a number of examples to illustrate these ideas Its main argument is that all scientific endeavors share a common set of principles and that each field including education research develops a specialization that accounts for the particulars of what is being studied The book also provides suggestions for how the federal government can best support high quality scientific research in education [What is Scientific Inquiry? Comprehensive and broad but also succinct and compact the book is focusing on the key principles and challenges for a novice doctoral student      **The Psychology of Scientific Inquiry** Aaro Toomela, 2019-11-05 This brief sets out on a course to distinguish three main kinds of thought that underlie scientific thinking Current science has not agreed on an understanding of what exactly the aim of science actually is how to understand scientific knowledge and how such knowledge can be achieved Furthermore no science today also explicitly admits the fact that knowledge can be constructed in different ways and therefore every scientist should be able to recognize the form of thought that undergirds their understanding of scientific theory In response to this this text seeks to answer the questions What is science What is scientific explanation What is causality and why it matters Science is a way to find new knowledge The way we think about the world constrains the aspects of it we can understand Scientists the author suggests should engage in a metacognitive perspective on scientific theory that reflects not only what exists in the world but also the way the scientist thinks about the world
