How Scientific Instruments Speak Bas de Boer, 2021-01-14 Science is highly dependent on technologies to observe scientific objects For example astronomers need telescopes to observe planetary movements and cognitive neuroscience depends on brain imaging technologies to investigate human cognition But how do such technologies shape scientific practice and how do new scientific objects come into being when new technologies are used in science In *How Scientific Instruments Speak* Bas de Boer develops a philosophical account of how technologies shape the reality that scientists study arguing that we should understand scientific instruments as mediating technologies Rather than mute tools serving pre existing human goals scientific instruments play an active role in shaping scientific work De Boer uses this account to discuss how brain imaging and stimulation technologies mediate the way in which cognitive neuroscientists investigate human cognitive functions The development of cognitive neuroscience runs parallel with the development of advanced brain imaging technologies drawing a lot of public attention sometimes called neurohype because of its alleged capacity to demystify the human mind By analyzing how the objects that cognitive neuroscientists study are mediated by brain imaging technologies de Boer explicates the processes by which human cognition is investigated

Making Scientific Instruments in the Industrial Revolution A.D. Morrison-Low, 2017-03-02 At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self confidence to exhibit their products in London to an international audience How had this change come about and why This book looks at the four main and two lesser English centres known for instrument production outside the capital Birmingham Liverpool Manchester and Sheffield along with the older population centres in Bristol and York Making wide use of new sources Dr Morrison Low curator of history of science at the National Museums of Scotland charts the growth of these centres and provides a characterisation of their products New information is provided on aspects of the trade especially marketing techniques sources of materials tools and customer relationships From contemporary evidence she argues that the principal output of the provincial trade with some notable exceptions must have been into the London marketplace anonymously and at the cheaper end of the market She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades By virtue of its approach and subject matter the book considers aspects of economic and business history gender and the family the history of science and technology material culture and patterns of migration It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government In bringing together this wide range of interests Dr Morrison Low enables us to appreciate how central the making selling and distribution of scientific instruments was for the Industrial Revolution

[Irish National Inventory of Historic Scientific Instruments](#) Charles Mollan, 1995-11-15 Carried out over a period of ten years this is a listing of scientific instruments dating before 1920 preserved in many collections throughout the island of Ireland It gives location date and description for each of the more than 5 000 entries together where appropriate with relevant accompanying detail It demonstrates clearly that Ireland has an important resource which hitherto had not been appreciated It also preserves information about collections which have since been lost sold or otherwise dispersed

century to the First World War The evidence presented here is derived from sources as diverse as contemporary trade literature through newspaper advertisements to rarely surviving inventories and from the instruments themselves The picture may not yet be complete but it has been acknowledged that it is more complex than sketched out twenty five or even fifty years ago Here is a collection of case studies from the United Kingdom the Americas and Europe showing instruments moving from maker to market place and to some extent what happened next Contributors are Alexi Baker Paolo Brenni Laura Ch zaro Gloria Clifton Peggy Aldrich Kidwell Richard L Kremer A D Morrison Low Joshua Nall Sara J Schechner and Liba Taub *Engineering Simulations as Scientific Instruments: A Pattern Language* Susan Stepney, Fiona A.C.

Polack, 2018-11-01 This book describes CoSMoS Complex Systems Modelling and Simulation a pattern based approach to engineering trustworthy simulations that are both scientifically useful to the researcher and scientifically credible to third parties This approach emphasises three key aspects to this development of a simulation as a scientific instrument the use of explicit models to capture the scientific domain the engineered simulation platform and the experimental results of running simulations the use of arguments to provide evidence that the scientific instrument is fit for purpose and the close co working of domain scientists and simulation software engineers In Part I the authors provide a managerial overview the rationale for and benefits of using the CoSMoS approach and a small worked example to demonstrate it in action Part II is a catalogue of the core patterns Part III lists more specific helper patterns showing possible routes to a simulation Finally Part IV documents CellBranch a substantial case study developed using the CoSMoS approach *Journal of the Optical Society of America and Review of Scientific Instruments*, 1922 **Scientific Instruments, 1500-1900** Gerard L'Estrange
