Scientific Practice Of Professional Psychology:

The Scientific Practice of Professional Psychology Steven J. Trierweiler, George Stricker, 2013-11-21 A workable vision of scientific practice has proven to be an elusive if laudable goal for professional psychology. The field cannot be faulted for failing to seek scientific wisdom, but it has been slow to integrate that wisdom fully with the wisdom of practice. This has proven to be a major oversight for despite psychology's long-standing commitment to science, practitioners are unlikely to think scientifically. Methods and products of science are described in ways that make it impossible to do so. Unfortunately, the rhetoric of science too often has done just that. So focused has it been on the problem of distinguishing good science from bad that it has inadvertently defeated any hope of a practical science developing in our field. We offer one remedy for this situation. This book is about scientific thinking for the professional psychologist. Specifically, it is a primer on the application of scientific logic to professional practice. We argue that the professional needs a more straightforward and realistic scientific identity than heretofore has been available. The professional consciously must become a local clinical scientist, bringing all the power of scientific thought to the specifics of the clinical situation. Contrary to forces in psychology that promote uncritical acceptance of science as given by academic researchers or alternatively that encourage criticism and ultimate disregard of the scientific endeavor, we call for a redoubling of efforts to incorporate scientific thought into practical professional inquiry.

The Oxford Handbook of Education and Training in Professional Psychology W. Brad Johnson Ph.D., Nadine Kaslow Ph.D., 2014-03-11 The Oxford Handbook of Education and Training in Professional Psychology provides the first comprehensive treatment of the processes and current state of the art practices bearing on educating and training professional psychologists. Thousands of psychologists are employed full time as faculty members or clinical supervisors in graduate practicum, internship, and postdoctoral training programs or training sites. This handbook provides a single resource that pulls together the substantial scholarship on education and training in psychology, covering the full spectrum of historic developments, salient issues, current standards, and emerging trends in psychology education and training. It provides a thorough analysis of doctoral and postdoctoral training for psychologists in clinical counseling or school psychology specialties. Because competency issues are moving to the forefront in the design of training programs and the evaluation of trainee performance, the handbook's authors have made models and standards for competency a primary theme. This volume captures the current state of education and training while emphasizing emerging trends and forecasting future directions.
