Committee on Education and Labor,1967 *The Black-White Test Score Gap* Christopher Jencks,Meredith Phillips,2011-01-01 The test score gap between blacks and whites on vocabulary reading and math tests as well as on tests that claim to measure scholastic aptitude and intelligence is large enough to have far reaching social and economic consequences In their introduction to this book Christopher Jencks and Meredith Phillips argue that eliminating the disparity would dramatically reduce economic and educational inequality between blacks and whites Indeed they think that closing the gap would do more to promote racial equality than any other strategy now under serious discussion The book offers a comprehensive look at the factors that contribute to the test score gap and discusses options for substantially reducing it Although significant attempts have been made over the past three decades to shrink the test score gap including increased funding for predominantly black schools desegregation of southern schools and programs to alleviate poverty the median

black American still scores below 75 percent of American whites on most standardized tests The book brings together recent evidence on some of the most controversial and puzzling aspects of the test score debate including the role of test bias heredity and family background It also looks at how and why the gap has changed over the past generation reviews the educational psychological and cultural explanations for the gap and analyzes its educational and economic consequences The authors demonstrate that traditional explanations account for only a small part of the black white test score gap They argue that this is partly because traditional explanations have put too much emphasis on racial disparities in economic resources both in homes and in schools and on demographic factors like family structure They say that successful theories will put more emphasis on psychological and cultural factors such as the way black and white parents teach their children to deal with things they do not know or understand and the way black and white children respond to the same classroom experiences Finally they call for large scale experiments to determine the effects of schools racial mix class size ability grouping and other policies In addition to the editors the contributors include Claude Steele Ronald Ferguson William G Bowen Philip Cook and William Julius Wilson Encyclopedia of Giftedness, Creativity, and Talent Barbara Kerr,2009-06-17 The three volume Encyclopedia of Giftedness Creativity and Talent presents state of the art research and ready to use facts from the fields of education psychology sociology and the arts *Improving Reading Comprehension of Self-Chosen Books Through Computer Assessment and Feedback* Keith James Topping,2022-07-12 Schools around the world use online programs like Accelerated Reader and Reading Counts to improve students reading comprehension of real books but how can such software be used most effectively In this unique resource researcher Keith Topping analyzes independent research studies and brings you best practices on quality implementation to enhance effectiveness He explains the evidence base for the programs in a comprehensible way and addresses many common questions such as Does it work How should it be implemented to make it work and Is it cheaper and more efficient in teacher time than what we were doing before He also discusses best practices for using the assessment data for tailoring implementation in elementary vs high schools and for working with disadvantaged students Appropriate for teachers literacy coaches curriculum leaders and other stakeholders the book will provide you with a strong research foundation and easily accessible information to help you fine tune your understanding of the reading programs and implement them more successfully in your schools and classrooms **The ... Minnesota Journal of Education, 1952 **Guidance** Robert E. Glennen, 1966 *Controlling Public Education* Kathryn A. McDermott, 1999 Most Americans believe that local school districts are the only means by which citizens may exercise control over public education Kathryn McDermott argues to the contrary that existing local institutions are no longer sufficient for achieving either equity or democratic governance Not only is local control inequitable it also fails to live up to its reputation for guaranteeing public participation and citizen influence Drawing upon democratic theory and the results of field research in New Haven Connecticut and three suburbs McDermott contends that our educational system can be made more democratic by centralizing control over funding while decentralizing most authority over schools to the level of schools themselves while enacting public school choice controlled for racial balance To many people in Connecticut and elsewhere the tension between equal opportunity for all students and local control of public education seems impossible to resolve In 1996 the Connecticut Supreme Court ruled in *Sheff v O'Neill* that local control produces unconstitutional segregation of public schools Nearly all of the state's 169 towns operate their own public schools and like the towns they serve the schools are generally homogeneous with respect to race and socioeconomic class In the *Sheff* ruling the court declared that making school districts coterminous with town lines is the single most important factor contributing to the present concentration of racial and ethnic minorities in the Hartford public school system At the same time the court also acknowledged that the town-based school system presently furthers the legitimate nonracial interests of permitting considerable local control and accountability in educational matters In Connecticut and elsewhere it has often seemed necessary to choose between local control and equity in public education and local control has almost always won McDermott argues that rather than seeing local control and equity as conflicting goals policymakers should regard them as equally important components of democracy in public education In her view a truly democratic system of education should both encourage citizen participation in school governance and contribute to the formation and maintenance of a social order in which equality of opportunity prevails over hierarchies of privilege Centralizing distribution of resources and using controlled choice to end racial isolation would provide greater equality of opportunity while decentralizing management of schools would expand citizen participation McDermott's conclusions break new ground in our understanding of local school governance itself and call into question the conventional wisdom about local participation These findings should interest those who study school governance and reform especially in an urban setting as well as policy makers administrators teachers students and citizens eager to improve their schools *Funding Public Schools* Kenneth K. Wong, 1999 This book examines the fundamental role of politics in funding our public schools and fills a conceptual imbalance in the current literature in school finance and educational policy Unlike

those who are primarily concerned about cost efficiency Kenneth Wong specifies how resources are allocated for what purposes at different levels of the government In contrast to those who focus on litigation as a way to reduce funding gaps he underscores institutional stalemate and the lack of political will to act as important factors that affect legislative deadlock in school finance reform Wong defines how politics has sustained various types of rules that affect the allocation of resources at the federal state and local level While these rules have been remarkably stable over the past twenty to thirty years they have often worked at cross purposes by fragmenting policy and constraining the education process at schools with the greatest needs Wong s examination is shaped by several questions How do these rules come about What role does politics play in retention of the rules Do the federal state and local governments espouse different policies In what ways do these policies operate at cross purposes How do they affect educational opportunities Do the policies cohere in ways that promote better and more equitable student outcomes Wong concludes that the five types of entrenched rules for resource allocation are rooted in existing governance arrangements and seemingly impervious to partisan shifts interest group pressures and constitutional challenge And because these rules foster policy fragmentation and embody initiatives out of step with the performance based reform agenda of the 1990s the outlook for positive change in public education is uncertain unless fairly radical approaches are employed Wong also analyzes four allocative reform models two based on the assumption that existing political structures are unlikely to change and two that seek to empower actors at the school level The two models for systemwide restructuring aimed at intergovernmental coordination and or integrated governance would seek to clarify responsibilities for public education among federal state and local authorities above all integrating political and educational accountability The other two models identified by Wong shift control from state and district to the school one based on local leadership and the other based on market forces In discussing the guiding principles of the four models Wong takes care to identify both the potential and limitations of each Written with a broad policy audience in mind Wong s book should appeal to professionals interested in the politics of educational reform and to teachers of courses dealing with educational policy and administration and intergovernmental relations
