Analysis of Arithmetic for Mathematics Teaching Gaea Leinhardt, Ralph Putnam, Rosemary A. Hattrup, 1992 This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction The chapters deal with the research on and conceptual analysis of specific arithmetic topics addition subtraction multiplication division decimals and fractions or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics intuition number sense and estimation Serving as a link between the communities of cognitive researchers and mathematics educators the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well

Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development Some of the main threads running through the book are the various ways in which structures can express themselves in children s developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades

Children's Books in Print, 2007 , 2006

Educating Young Children from Preschool Through Primary Grades Laverne Warner, Judith Sower, 2005 Catering to the first time teacher the authors provide day to day challenges of what it means to teach young children in the classroom while fostering a mentoring environment for pre service teachers entering the field

Chapter 4 addresses children with special needs and commonly used modifications for each of the disabilities A unique chapter on teaching fourth graders chapter 10 has been included that may be covered or skipped depending upon state requirements Lesson planning is emphasized throughout and sample lesson plans and mini lessons have been included for every grade level and subject area

The Arithmetic Teacher ,1990 *Relationships Between Generalizing and Justifying* Amy B Ellis,2004 This dissertation explicates the nature of the relationships between students acts of generalizing and acts of justifying A new generalization framework supports the development of these relationships This cohesive categorization system differentiates the types of generalizations students construct when reasoning mathematically The framework accounts for multiple levels of generalizing and distinguishes between statements of generalization and the generalizing actions that lead to those statements The framework in concert with Harel and Sowder s 1998 taxonomy of proof schemes generated direct links between types of generalizations and associated proof schemes as well as more complex relationships revealing how the two acts mutually influence one another Research examining students ability to generalize and justify suggests that students experience severe difficulty in creating and using appropriate generalizations and proofs A review of the rich body of literature documenting students errors highlights the need to examine more thoroughly what students do understand to be general and convincing This study extends Lobato s 2003 actor oriented transfer perspective to examine the ways in which middle school students generalized during units on linear functions Qualitative analysis of clinical interviews and teaching experiment data focused on identifying and categorizing students generalizations proof schemes and the relationships between acts of generalizing and justifying Results include six hypotheses of direct links between particular categories of generalizations and particular proof schemes The study also identifies five dimensions across which students generalizations and justifications mutually interact to support increasingly sophisticated reasoning a cycles of generalizing actions and generalization products b the role of students attention focus c generalizations that promote the transformational proof scheme d the role of justification as explaining why and e generalizations supported by justifying via the transformational proof scheme The dimensions provide a way to account for the evolution of students generalizing and justifying Analysis of the data revealed that reasoning with emergent quantities constructed from ratios of two initial quantities is connected to more powerful generalizing and justifying than that seen when students reason with number patterns
