Scour Technology:

Scour Technology George W. Annandale, 2005-12-06 Scouring is an engineering problem caused by exposing a structure's foundation to moving water eventually causing weakness collapse or flooding This reference shows civil engineers how to utilize state of the art techniques to analyze predict and prevent scour for all earth materials Valuable case studies *Scour at Bridge Foundations on Rock* Jeffrey Ray Keaton, Subhendu Kumar Mishra, Paul E. Clopper, 2012 This report provides a methodology for estimating the time rate of scour and the design scour depth for a bridge founded on rock as well as design and construction guidelines for application of the methodology It will be of interest to hydraulic bridge and geotechnical engineers responsible for designing bridge foundations on rock or maintenance engineers concerned about existing bridges founded on erodible rock Foreword *The Upstarts* Brad Stone, 2017-01-31 A look deep inside the new Silicon Valley from the New York Times bestselling author of The Everything Store Ten years ago the idea of getting into a stranger's car or a walking into a stranger's home would have seemed bizarre and dangerous but today it's as common as ordering a book online Uber and Airbnb have ushered in a new era redefining neighborhoods challenging the way governments regulate business and changing the way we travel In the spirit of iconic Silicon Valley renegades like Steve Jobs and Bill Gates another generation of entrepreneurs is using technology to upend convention and disrupt entire industries These are the upstarts idiosyncratic founders with limitless drive and an abundance of self confidence Led by such visionaries as Travis Kalanick of Uber and Brian Chesky of Airbnb they are rewriting the rules of business and often sidestepping serious ethical and legal obstacles in the process The Upstarts is the definitive story of two new titans of business and a dawning age of tenacity conflict and wealth In Brad Stone's riveting account of the most radical companies of the new Silicon Valley we discover how it all happened and what it took to change the world Infrastructure Health in Civil Engineering Mohammed M. Ettouney, Sreenivas Alampalli, 2011-09-27 Continually increasing demands on infrastructures mean that maintenance and renewal require timely appropriate action that maximizes benefits while minimizing cost To be as well informed as possible decision makers must have an optimal understanding of an infrastructure's condition what it is now and what it is expected to be in the future Written by two highly respected engineers the second volume Infrastructure Health in Civil Engineering Applications and Management integrates the decision making concept into theoretical and practical issues It covers State of the art practice and future directions Use of probability and statistics in areas including structural modeling Specific practical applications including retrofitting and rehabilitation in response to earthquake damage corrosion fatigue and bridge security Use of IHCE for management and maintenance of different types of structures using pre stressed and reinforced concrete and fiber reinforced polymers FRPs Numerous practical case studies as well as coverage of the latest techniques in the use of sensors for damage detection and load testing Built to correspond to the ideas presented in its companion volume Theory and Components this is an invaluable guide to optimized cost saving methods that will help readers meet safety
