Longitude The True Story Of A Genius:

Longitude Dava Sobel, 2007-11-05 Describes the forty year effort of John Harrison to invent the chronometer the first instrument able to keep accurate time for navigational purposes The Illustrated Longitude Dava Sobel, William J. H. Andrewes, 1999 Longitude Dava Sobel's no 1 bestseller is the elegant biography of the lone genius who solved the greatest scientific problem of his times With new material from Dava Sobel and William Andrewes and illustrated with over 200 integrated photographs The Illustrated Longitude is the essential book for everyone who fell in love with John Harrison's story and wants to know more Anyone alive in the 18th century would have known that the longitude problem was the thorniest scientific dilemma of the day and had been for centuries Lacking the ability to measure their longitude sailors throughout the great ages of exploration had been literally lost at sea as soon as they lost sight of land The scientific establishment throughout Europe from Galileo to Sir Isaac Newton had mapped the heavens in its certain pursuit of a celestial answer In stark contrast one man John Harrison dared to imagine a mechanical solution The Illustrated Longitude is a fascinating history of astronomy navigation and clockmaking Lavishly produced with over 200 illustrations The Illustrated Longitude has much new material to help the reader learn more of John Harrison's extraordinary story and *Longitude* Dava Sobel, 2014-02-27 Without the ability to measure longitude the great age of exploration was marked by the number of sailors lost at sea as soon as they lost sight of land The longitude problem had defeated both Galileo and Newton In 1714 Parliament offered a reward to anyone whose method proved successful Only one man tried a mechanical solution a clock that would keep precise time at sea something no clock could yet do on land **Longitude** Dava Sobel, 2009-07-01

CLASSICS Longitude Dava Sobel, **A Global Earth in the Classroom** David Salomoni, 2024-03-11 This volume offers a scholarly examination of educational history highlighting the pivotal role of educational practices from the late medieval era to the early modern period It provides a dynamic forum for emerging academics in the field revealing fresh multifaceted perspectives on the educational methods of this era The work illuminates the sophisticated educational systems that shaped Renaissance Milan's merchants and the education of cantors in royal courts and cathedrals Spanning from Brazil to India it traces the extensive reach of Jesuit influence and reveals how their teachings fostered an early consciousness of a globally interconnected world in European education Contributors to this volume Bradley Blankemeyer Laura Madella Jessica Ottelli Federico Piseri David Salomoni and Carolina Vaz de Carvalho Seven Tales of the Pendulum Gregory L. Baker, 2011-02-24 The pendulum is a unique physical system which exhibits remarkably varied and complex behavior under many different conditions Seven tales detailing different important facets of the pendulum show the exciting diversity of the science of the pendulum and its untold significance in the history of human intellectual development Teaching of Geography M.h.siddiqui, **Encyclopedia of Environment and Society** Paul Robbins, 2007-08-27 As befits the topic this beautifully packaged wonderfully illustrated interdisciplinary resource has more than 1200 entries written by specialists A helpful

new ways of thinking behaving and living in a more than human world *Navigational Enterprises in Europe and its Empires, 1730-1850* Rebekah Higgitt, Richard Dunn, 2016-02-19 This book explores the development of navigation in the eighteenth and nineteenth centuries It examines the role of men of science seamen and practitioners across Europe and the realities of navigational practice showing that old and new methods were complementary not exclusive their use dependent on many competing factors **Enchantment Of Urania, The: 25 Centuries Of Exploration Of The Sky** Massimo

Capaccioli, 2024-03-19 Today we know much about the sky how stars are born how they live and die and how the universe as a whole evolves We have learned of the existence of another type of matter indifferent to light and yet decisive for the formation of galaxies and we have a hint of a dark energy that since the last 4 5 billion years has taken over the control of the cosmos We postulated and then discovered and even photographed black holes and listened to the faint rustle of the space time ripple produced when these monsters devour each other We reached these astonishing results recognized by a bunch of Nobel Prizes and filling every day the media with wonders for the eyes and the mind by the marriage of physics and astronomy that unified the Earth with the sky and then by the leap forward of science and technology in the Twentieth Century This rich heritage has ancient roots It was built by accumulating discoveries with errors observations with fantasies myths and superstitions with flashes of genius over a span of millennia since Homo sapiens turning his eyes to the immutable and perfect sky began to ask questions The book is a narration of the answers to these questions that had evolved over time a progressive path inserted in the general history with some second thoughts and many obstacles This is a saga of men and machines where greatness sometimes mixes with misery and passion often borders on sacrifice and even martyrdom Why should we know it Because our current knowledge is the result of these efforts and of the preconceptions that accompanied them The challenge has been to present this complex and intricate subject without resorting to any formulas so that it can be accessible to a wide audience of curious people including high school and university students and in general all those who normally keep themselves informed of scientific things A rich bibliography has also been added in the appendix for those wishing to learn more on one or more topics **Captain Cook** Frank McLynn, 2011-06-07 This thoroughly researched and sharply opinionated biography presents a nuanced portrait of the renowned 18th century navigator The Wall Street Journal

The age of discovery was at its peak in the eighteenth century with bold adventurers charting the furthest reaches of the globe Foremost among these explorers was Captain James Cook of the British Royal Navy Recent writers have viewed Cook through the lens of colonial exploitation regarding him as a villain While they raise important issues many of these critical accounts overlook his major contributions to science navigation and cartography In Captain Cook Frank McLynn re creates the voyages that took the famous navigator from his native England to the outer reaches of the Pacific Ocean Although Cook died in a senseless avoidable conflict with the people of Hawaii McLynn illustrates that to the men with whom he served Cook was master of the seas and nothing less than a titan McLynn reveals Cook s place in history as a brave and brilliant yet

tragically flawed man Between Apocalypse and Eschaton Joseph S. Flipper, 2015 *Between Apocalypse and Eschaton* argues that eschatology is the key to de Lubacs theological project and critical to understanding the nouvelle thologie the group of theologians with whom de Lubac was associated While much recent focuses on the controversies over the supernatural this work returns to an often neglected aspect of de Lubacs work and examines it in the wider historical political and theological context of war torn twentieth century Europe which critically shape the meaning of the end

Shaping the Day Paul Glennie, Nigel Thrift, 2009-02-12 Timekeeping is an essential activity in the modern world and we take it for granted that our lives are shaped by the hours of the day Yet what seems so ordinary today is actually the extraordinary outcome of centuries of technical innovation and circulation of ideas about time Shaping the Day is a pathbreaking study of the practice of timekeeping in England and Wales between 1300 and 1800 Drawing on many unique historical sources ranging from personal diaries to housekeeping manuals Paul Glennie and Nigel Thrift illustrate how a particular kind of common sense about time came into being and how it developed during this period Many remarkable figures make their appearance ranging from the well known such as Edmund Halley Samuel Pepys and John Harrison who solved the problem of longitude to less familiar characters including sailors gamblers and burglars Overturning many common perceptions of the past for example that clock time and the industrial revolution were intimately related this unique historical study will engage all readers interested in how telling the time has come to dominate our way of life **Damn!**

Why Didn't I Write That? Marc McCutcheon, 2001 Offers encouragement to amateur writers who want to support themselves by writing Describes the process from idea research query letters and proposals to agents contract negotiations and promotion **Technology-based Inquiry for Middle School** Edwin P. Christmann, 2006 The practical tone makes this collection beneficial to in service science teachers as well as pre professionals taking methods courses Technology Based Inquiry will give you the confidence that comes with deeper understanding of how to use the latest technology to increase science learning The Routledge History of the Modern Maritime World since 1500 Kenneth Morgan, 2025-05-01 The Routledge History of the Modern Maritime World since 1500 provides a wide ranging set of chapters covering the sixteenth century to the present which represent the main lines of current enquiry in maritime history Over the past half century maritime history has become a significant sub field of historical research that intersects with broader historical concerns such as oceanic history global patterns of production and consumption and the maritime heritage industry Informed by original research an engagement with current historiographical concerns and a global geographical reach the book is divided into sections covering shipping ports merchants and trade maritime environments coastal zones and the human dimension Chapters focus on different countries across different ranges of time and also with different methodological approaches The six sections of this book show the significant areas central to the study and understanding of the modern maritime world and collectively they highlight the areas in which the themes pursued by maritime historians have advanced and are currently

moving This book will appeal to various academic audiences students will find chapters dealing with major topics in maritime history that will help them in their courses for professional scholars in history archaeology heritage studies historical sociology and economics chapters outline some of the latest research in the field Seeking Nature's Logic David B. Wilson,2009-01-01 Studies the path of natural philosophy i e physics from Isaac Newton through Scotland into the nineteenth century background to the modern revolution in physics Examines how the history of science has been influenced by John Robison and other notable intellectuals of the Scottish Enlightenment Provided by publisher **Exploration and Science** Michael Sean Reidy,Gary Kroll,Erik M. Conway,2006-12-27 This comprehensive volume explores the intricate mutually dependent relationship between science and exploration how each has repeatedly built on the discoveries of the other and in the process opened new frontiers A simple question Which came first advances in navigation or successful voyages of discovery A complicated answer Both and neither For more than four centuries scientists and explorers have worked together sometimes intentionally and sometimes not in an ongoing symbiotic partnership When early explorers brought back exotic flora and fauna from newly discovered lands scientists were able to challenge ancient authorities for the first time As a result scientists not only invented new navigational tools to encourage exploration but also created a new approach to studying nature in which observations were more important than reason and authority The story of the relationship between science and exploration analyzed here for the first time is nothing less than the history of modern science and the expanding human universe **The Science of Literature** Helmut Müller-Sievers,2015-04-24 One of the most contentious questions in contemporary literary studies is whether there can ever be a science of literature that can lay claim to objectivity and universality for example by concentrating on philological criticism by appealing to cognitive science or by exposing the underlying media of literary communication The present collection of essays seeks to open up this discussion by posing the question s historical and systematic double has there been a science of literature i e a mode of presentation and practice of reference in science that owes its coherence to the discourse of literature Detailed analyses of scientific literary and philosophical texts show that from the late 18th to the late 19th century science and literature were bound to one another through an intricate web of mutual dependence and distinct yet incalculable difference The Science of Literature suggests that this legacy continues to shape the relation between literary and scientific discourses inside and outside of academia
