The biology of hypogean fishes Aldemaro Romero,2013-06-29 Hypogean cave artesian fishes have fascinated researchers even before they were described in the scientific literature in 1842 Since then a number of scientists have used them to justify their own evolutionary ideas from neo Lamarckism to neo Darwinism from neutral evolution to selectionist approaches Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed there are those with features expected from living in total darkness complete blindness and depigmentation and poor in nutrients extremely low metabolic rates others differ very little if any from their epigeal surface ancestors in their morphology and physiology but not so in their behavior Some of them even live in nutrient rich environments Actually one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms blindness depigmentation than with troglomorphic ones The study of these apparently unadapted fishes is providing new insights into our understanding of the evolution of phenotypic characters founding effect behavioral and physiological adaptations The 86 species of troglomorphic fishes described so far belong to 18 different families many of which would hardly fit the notion that they were preadapted to conquer the underground environment Further many troglomorphic species show very little genotypic differentiation when compared with their putative ancestors indicating that massive phenotype changes can be achieved via little genetic reorganization a reorganization that mostly affects regulatory genes These and many other topics are discussed in this volume containing 29 papers written by 41 authors from 9 countries Hopefully this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood convergent evolution Climbing Lessons Tim Bascom,2020-04-07 When Doc Bascom tries to show his grade school sons how to climb a huge sycamore he ends up dropping 12 feet flat out on his back Stunned he finally gasps So that s how it s done And in that moment he becomes an emblem for all fathers trying to lead the way failing then getting up and trying again This climbing lesson is just one of 40 playful sometimes poignant stories by award winning author Tim Bascom who illustrates the special bond between fathers and sons and how that relationship must change with time When Tim takes his own turn at fathering he realizes that his devoted toddlers are turning into unimpressed teenagers No longer the hero he had hoped to be he must accept a new flawed version of himself not unlike his father before him These brief inter linked stories

show that abiding affection can still prevail bringing fathers and sons closer even as they tackle the steepest parts of the climb **S.D. Gordon's Quiet talks** Samuel Dickey Gordon, 1903
