Luminescence Of Wideband Semiconductors:

Wide-band-gap Semiconductors C.G. Van de Walle, 2012-12-02 Wide band gap semiconductors have been a research topic for many decades. However, it is only in recent years that the promise for technological applications came to be realized simultaneously. An upsurge of experimental and theoretical activity in the field has been witnessed. Semiconductors with wide band gaps exhibit unique electronic and optical properties. Their low intrinsic carrier concentrations and high breakdown voltage allow high temperature and high power applications. Diamond, SiC, etc. The short wavelength of band to band transitions allows emission in the green, blue, or even UV region of the spectrum. ZnSe, GaN, etc. In addition, many of these materials have favorable mechanical and thermal characteristics. These proceedings reflect the exciting progress made in this field. Successful p-type doping of ZnSe has recently led to the fabrication of blue-green injection lasers. In ZnSe applications of short wavelength light emitting devices range from color displays to optical storage. In SiC, advances in growth techniques for bulk as well as epitaxial material have made the commercial production of high temperature and high frequency devices possible. For GaN, refinement of growth procedures and new ways of obtaining doped material have resulted in blue light emitting diodes and opened the road to the development of laser diodes. Finally, while the quality of artificial diamond is not yet high enough for electronic applications, the promise it holds in terms of unique material properties is encouraging. Intense activity in the field. This volume contains contributions from recognized experts presently working on different material systems in the field. The papers cover the theoretical, experimental, and application oriented aspects of this exciting topic.

Luminescence of Wideband Semiconductors M. D. Galanin, 1990. Contains research on the optical and photoelectric properties of wideband ZnS, La₂S₃, La₂O₃S, and InP semiconductors. **Luminescence** Jagannathan Thirumalai, 2016-11-10

The aim of this book is to give readers a broad review of topical worldwide advancements in theoretical and experimental facts, instrumentation, and practical applications. It is written by luminescent materials and their prospects in dealing with different types of luminescence like photoluminescence, electroluminescence, thermo luminescence, triboluminescence, bioluminescence, design and applications. The additional part of this book deals with the dynamics of rare earth ions, photon down up converting materials, luminescence dating, lifetime, bioluminescence, microscopical perspectives, and prospects towards the basic research or for more advanced applications. This book is divided into four main sections: luminescent materials and their associated phenomena, photo physical properties and their emerging applications, thermoluminescence dating from theory to applications, and bioluminescence perspectives and prospects. Individual chapters should serve the broad spectrum of common readers of diverse expertise: layman, students, and researchers who may in this book find easily elucidated fundamentals as well as progressive principles of specific subjects associated with these phenomena. This book was created by 14 contributions from experts in different fields of luminescence and technology from over 20 research institutes worldwide. *Diluted Magnetic Semiconductors* Mukesh Kumar Jain, 1991. This review volume presents both basic

and applied aspects of diluted magnetic semiconductors DMS The term DMS applies generally to semiconductors in which a fraction of its constituent ions are replaced by magnetic ions This book is only the second to review DMS materials It presents a detailed treatment of the current state of knowledge of the established properties of DMS in the form of single crystals quantum wells and superlattices It also brings together recent work on new DMS materials and presents discussions on a wide range of possible DMS applications

Wide Band-Gap Semiconductor Nuclear Radiation Detector Yuming Zhang, Hui Guo, Jinfeng Zhang, Chiwen Qian, Yapeng Liu, 2025-09-26 This book's purpose and characteristics are not only to introduce the fundamental theoretical knowledge of nuclear radiation detection principles detector preparation and detection signal generation but also provides a comprehensive introduction of the design optimization and preparation of semiconductor nuclear radiation detection Beginning with the current materials and device processes of wide band gap semiconductors the book focuses on the challenges and essential technologies of detector design optimization and preparation The book also provides theoretical support for device design optimization and device failure analysis through the introduction of detector simulation models that integrate simulation results with experimental data

Processing of 'Wide Band Gap Semiconductors S. J. Pearton, 2013-01-15 Wide bandgap semiconductors made from such materials as GaN SiC diamond and ZnSe are undergoing a strong resurgence in recent years principally because of their direct bandgaps which give them a huge advantage over the indirect gap SiC As an example more than 10 million blue LEDs using this technology are sold each month and new high brightness 15 lumens per watt long life white LEDs are under development with the potential to replace incandescent bulbs in many situations This book provides readers with a broad overview of this rapidly expanding technology bringing them up to speed on new discoveries and commercial applications It provides specific technical applications of key processes such as laser diodes LEDs and very high temperature electronic controls on engines focusing on doping etching oxidation passivation growth techniques and more

Wide Band Gap Semiconductor Nanowires 1 Vincent Consonni, Guy Feuillet, 2014-08-08 GaN and ZnO nanowires can be grown using a wide variety of methods from physical vapor deposition to wet chemistry for optical devices This book starts by presenting the similarities and differences between GaN and ZnO materials as well as the assets and current limitations of nanowires for their use in optical devices including feasibility and perspectives It then focuses on the nucleation and growth mechanisms of ZnO and GaN nanowires grown by various chemical and physical methods Finally it describes the formation of nanowire heterostructures applied to optical devices

Wide Band Gap Semiconductor Nanowires 2 Vincent Consonni, Guy Feuillet, 2014-08-08 This book the second of two volumes describes heterostructures and optoelectronic devices made from GaN and ZnO nanowires Over the last decade the number of publications on GaN and ZnO nanowires has grown exponentially in particular for their potential optical applications in LEDs lasers UV detectors or solar cells So far such applications are still in their infancy which we analyze as being mostly due to a lack of understanding and control of the growth of nanowires and related heterostructures

Furthermore dealing with two different but related semiconductors such as ZnO and GaN but also with different chemical and physical synthesis methods will bring valuable comparisons in order to gain a general approach for the growth of wide band gap nanowires applied to optical devices Instabilities of Relativistic Electron Beam in Plasma Valery B.

Krasovitskii,2008 This book is devoted to the non linear theory of the collective interaction between a modulated beam of relativistic charged particles and narrow electromagnetic and Langmuir wave packets in plasma or gas slow wave systems Regular oscillations excited by a relativistic beam under the conditions of Cherenkov resonance and the anomalous Doppler effect can be used to generate coherent microwave radiation and accelerate charged particles in plasma **Semiconductor**
