

Gravitation universelle

La loi de gravitation :

Interaction gravitationnelle

Interaction attractive entre deux objets massiques

deux objets massiques (qui ont une masse) quel qu'ils soient, exercent l'un sur l'autre une **action mécanique attractive**.

Entre deux objets massiques, il existe une **interaction attractive dite de gravitation**.

Loi de gravitation

Deux objets A et B, de masses respectives m_A et m_B dont les centres sont séparés par une distance d , exercent l'un sur l'autre des actions mécaniques attractives modélisées par des forces ayant la même intensité :

$$F = G \times \frac{m_A \times m_B}{d^2}$$

(newton)

G est appelée **constante de gravitation universelle**

Thanh Van Tran, 1996 [An Introduction to Relativistic Gravitation](#) Remi Hakim, 1999-05-20 This is an introductory textbook on applications of general relativity to astrophysics and cosmology The aim is to provide graduate students with a toolkit for understanding astronomical phenomena that involve velocities close to that of light or intense gravitational fields The approach taken is first to give the reader a thorough grounding in special relativity with space time the central concept following which general relativity presents few conceptual difficulties Examples of relativistic gravitation in action are drawn from the astrophysical domain The book can be read on two levels first as an introductory fast track course and then as a detailed course reinforced by problems which illuminate technical examples The book has extensive links to the literature of relativistic astrophysics and cosmology **An Introduction to General Relativity and Cosmology** Jerzy Plebanski, Andrzej Krasinski, 2024-06-06 Experts introduce the tools of GR and relativistic cosmology guiding advanced students through complete derivations of the results **Very High Energy Phenomena in the Universe** Yannick Giraud-Héraud, J. course based text is devoted to the 3+1 formalism of general relativity which also constitutes the theoretical foundations of numerical relativity. The book starts by establishing the mathematical background: differential geometry, hypersurfaces embedded in space-time, foliation of space-time by a family of space-like hypersurfaces, and then turns to the 3+1 decomposition of the Einstein equations giving rise to the Cauchy problem with constraints which constitutes the core of 3+1 formalism. The ADM Hamiltonian formulation of general relativity is also introduced at this stage. Finally, the decomposition of the matter and electromagnetic field equations is presented focusing on the astrophysically relevant cases of a perfect fluid and a perfect conductor ideal magnetohydrodynamics. The second part of the book introduces more advanced topics: the conformal transformation of the 3-metric on each hypersurface and the corresponding rewriting of the 3+1 Einstein equations, the Isenberg-Wilson-Mathews approximation to general relativity, global quantities associated with asymptotic flatness: ADM mass, linear and angular momentum, and with symmetries: Komar mass and angular momentum. In the last part, the initial data problem is studied: the choice of spacetime coordinates within the 3+1 framework is discussed and various schemes for the time integration of the 3+1 Einstein equations are reviewed. The prerequisites are those of a basic general relativity course with calculations and derivations presented in detail, making this text complete and self-contained. Numerical techniques are not covered in this book.

L'Universel (Traduit) Walter Russell, 2022-05-04. THE UNIVERSAL ONE a t publi l origine en 1927 et distribu aux meilleurs scientifiques du pays. Il est r dit en cette p riode cruciale dans le seul but de diffuser nouveau de nouvelles connaissances scientifiques vitales pour ce nouvel ge de nouvelle compr hension. Aujourd'hui le monde entier est dans un tat de chaos luttant contre les forces de la cupidit, de l'envie, de la jalousie et de la peur. La dysharmonie est omniprsente. Toutes nos relations humaines sont violemment boulevers es. La civilisation est l'envers. La science est utilis e pour d truire et non pour construire. Nous parlons de la paix dans le monde mais ceux qui doivent planifier le nouveau monde ne connaissent pas la r ponse, la solution. La connaissance actuelle de la relation de l'homme, la nature et de la loi naturelle qui contr le ses relations humaines est jusqu pr sent inad quate pour r pondre la situation. L'homme est encore trop proche de sa jungle pour conna tre la loi qui r git inexorablement toutes ses actions et celles de la nature ou pour comprendre qu'il doit ob ir la nature ou s'autod truire. Encore domin par les habitudes de la jungle, il r gle ses relations humaines par les m thodes de la jungle. Les guerres et le chaos mondial continueront jusqu ce qu'il acqui re de nouvelles connaissances applicables au nouveau cycle venir de l'volution de l'homme. Quelles sont ces nouvelles connaissances? Une cosmogonie coh rente est cruellement n cessaire pour ce jour naissant de l'exaltation de l'homme qui est venir. Walter Russell a consacr sept ann es enti res la r daction de ce livre. Lorsqu'il a t publi pour la premi re fois en 1927, il a suscit plus de condamnation que de faveur de la part d'un monde qui n tait pas alors aussi pr t l'accueillir qu'aujourd'hui. Le livre m langeait science et m taphysique d'une mani re qui annulait son impression sur les physiciens. Peu peu, cependant, nombre de ses affirmations alors radicales ont t v rifi es par certains des plus grands scientifiques du monde et lui ont valu de nombreux adeptes. Le physicien tablit une

ligne de démarcation nette entre les choses qu'il peut détecter par l'évidence de ses sens et les choses qui se trouvent au-delà de cette évidence. Il n'est pas question de nier l'existence d'une quelconque chose au-delà de la portée de ses sens et de ses instruments sensoriels mais ce qui peut s'y trouver est conjectural et par conséquent inadmissible en tant que données scientifiques de nature fiable. En d'autres termes, les preuves matérielles qui se situent dans les limites étroites de la portée des sens de l'homme sont les seules preuves admissibles pour la science. Mais qu'en est-il de ce vaste domaine qui ne répond pas nos corps et nos instruments sensoriels. Au cours des siècles, quelques rares personnes ont tenté d'autoriser à couper les sens qui relient la matière à sa source motrice dans la conscience de l'esprit universel. Ces quelques personnes ont pris conscience du cosmos et ont essayé de faire connaître au monde sa simplicité.
