

TABLE 1.

## Features of Pharmacology-Related Versus Idiosyncratic Effects of Common Psychotropic Medications

Feature	Pharmacology-Related Effects (Type A)	Idiosyncratic Effects (Type B)
Underlying mechanism	Consequence of the pharmacologic action of the individual medicine	The result of an abnormal interaction between the medicine in the person, usually mediated by cytotoxic or immunologic effects triggered by the medicine or medicine metabolites
Predictability	Usually predictable	Predominantly unpredictable, although risk factors may be known (eg, a previous history of similar reaction with other medicines in the same class)
Frequency and relationship with dose or dosing strategy	Common to relatively common incidents; severity of the reaction typically increases in a dose-dependent fashion or plasma concentration of the medicine	Uncommon; some effects may be related to dose or titration rate
Time course	More common at the onset of treatment or after a dose increase; usually reversible after dose reduction. Some chronic effects (eg, weight gain) may develop insidiously and are not rapidly reversible	Most commonly observed during the first few weeks of therapy
Severity	Can interfere significantly with quality of life but are generally not life-threatening	May range from annoying side effects to life-threatening reactions
Action required	Usually managed by dosing adjustment	Discontinuing of the offending agent is often required
Prevention	Best carried out by choosing an agent whose adverse effect profile is predicted to be the most favorable for the individual patient	Avoid or use cautiously with specific lesions in high-risk groups. Increase medication dose gradually
Examples across different organ systems (medicine[s] implicated)		
Cardiovascular	Small elevations of blood pressure and heart rate (stimulants)	Sudden death (possible)
CNS	Akathisia (antidepressants, antipsychotics), tremor (lithium and others)	Increased suicidality (antidepressants, anticonvulsants), irreversible neurotoxicity (lithium)
Cutaneous	Pruritus, exanthema, and urticarial reactions (many)	Stevens-Johnson syndrome (lamotrigine)
Gastrointestinal	Changes in motility leading to diarrhea/constipation (many)	Hepatotoxicity (nefazodone, other antidepressants, naltrexone, antipsychotics, anticonvulsants, and others)
Genitourinary	Urinary retention (TCAs, antipsychotics, others)	Priapism (antipsychotics, trazodone)
Hematologic	Impaired platelet aggregation (SSRIs)	Agranulocytosis (clozapine)

Abbreviations: CNS, central nervous system; SSRIs, selective serotonin reuptake inhibitors; TCAs, tricyclic antidepressants.

**Reactions to Psychotropic Medication** Frank L. Tornatore, 2012-12-06 After thousands of clinical trials the efficacy of psychotropic drugs in the treatment of psychiatric disorders has become well established However the very success of these drugs has meant that many patients with chronic illnesses will receive them for a significant part of their lifetime Side effects and other adverse reactions are an unfortunate but unavoidable component of successful pharmacotherapy In deed the main emphasis in new drug development is often on the search for compounds that have fewer side effects although no one has as yet found an effective drug without them Therefore it is important for clinicians to be aware of side effect reaction profiles because they are often a major determining factor in the choice of therapy After more than three decades of major breakthroughs in the development of psychotropic drugs reactions to these medications are still frequently reported in the current liter ature and information about well known reactions is con stantly refined This book is an attempt to systematically collect and organize this large body of data and present it in an easy to use form All chapters follow the same reaction oriented logic and each important reaction is discussed using the same consistent subdivisions The more clinically impor tant reactions appear in the body of each chapter the more unusual or rarely reported reactions are briefly characterized in the miscellaneous section at the end of each chapter
