Dynamic RAM Muzaffer A. Siddiqi,2012-12-19 Because of their widespread use in mainframes PCs and mobile audio and video devices DRAMs are being manufactured in ever increasing volume both in stand alone and in embedded form as part of a system on chip Due to the optimum design of their components access transistor storage capacitor and peripherals DRAMs are the cheapest and densest semiconductor memory currently available As a result most of DRAM structure research and development focuses on the technology used for its constituent components and their interconnections However only a few books are available on semiconductor memories in general and fewer on DRAMs Dynamic RAM Technology Advancements provides a holistic view of the DRAM technology with a systematic description of the advancements in the field since the 1970s and an analysis of future challenges Topics Include DRAM cells of all types including planar three dimensional 3 D trench or stacked COB or CUB vertical and mechanically robust cells using advanced transistors and storage capacitors Advancements in transistor technology for the RCAT SCAT FinFET BT FinFET Saddle and advanced recess type and storage capacitor realizations How sub 100 nm trench DRAM technologies and sub 50 nm stacked DRAM technologies and related topics may lead to new research Various types of leakages and power consumption reduction methods in active and sleep

mode Various types of SAs and yield enhancement techniques employing ECC and redundancy A worthwhile addition to semiconductor memory research academicians and researchers interested in the design and optimization of high density and cost efficient DRAMs may also find it useful as part of a graduate level course **Advanced Programming in the UNIX Environment**

W. Richard Stevens, Stephen A. Rago, 2013-06-10 For more than twenty years serious C programmers have relied on one book for practical in depth knowledge of the programming interfaces that drive the UNIX and Linux kernels W Richard Stevens *Advanced Programming in the UNIX Environment* Now once again Rich's colleague Steve Rago has thoroughly updated this classic work The new third edition supports today's leading platforms reflects new technical advances and best practices and aligns with Version 4 of the Single UNIX Specification Steve carefully retains the spirit and approach that have made this book so valuable Building on Rich's pioneering work he begins with files directories and processes carefully laying the groundwork for more advanced techniques such as signal handling and terminal I/O He also thoroughly covers threads and multithreaded programming and socket based IPC This edition covers more than seventy new interfaces including POSIX asynchronous I/O spin locks barriers and POSIX semaphores Most obsolete interfaces have been removed except for a few that are ubiquitous Nearly all examples have been tested on four modern platforms Solaris 10 Mac OS X version 10.6.8 Darwin 10.8.0 FreeBSD 8.0 and Ubuntu version 12.04 based on Linux 3.2 As in previous editions you'll learn through examples including more than ten thousand lines of downloadable ISO C source code More than four hundred system calls and functions are demonstrated with concise complete programs that clearly illustrate their usage arguments and return values To tie together what you've learned the book presents several chapter length case studies each reflecting contemporary environments *Advanced Programming in the UNIX Environment* has helped generations of programmers write code with exceptional power performance and reliability Now updated for today's systems this third edition will be even more valuable *Communicating Process Architectures 2017 & 2018* J. Bækgaard Pedersen, K. Chalmers, J.F.

Broenink, 2019-03-26 Concurrent and parallel systems are intrinsic to the technology which underpins almost every aspect of our lives today This book presents the combined post proceedings for two important conferences on concurrent and parallel systems *Communicating Process Architectures 2017* held in Sliema Malta in August 2017 and *Communicating Process Architectures 2018* held in Dresden Germany in August 2018 CPA 2017 Fifteen papers were accepted for presentation and publication they cover topics including mathematical theory programming languages design and support tools verification and multicore infrastructure and applications ranging from supercomputing to embedded A workshop on domain specific concurrency skeletons and the abstracts of eight fringe presentations reporting on new ideas work in progress or interesting thoughts associated with concurrency are also included in these proceedings CPA 2018 Eighteen papers were accepted for presentation and publication they cover topics including mathematical theory design and programming language and support tools verification multicore run time infrastructure and applications at all levels from supercomputing to embedded A

workshop on translating CSP based languages to common programming languages and the abstracts of four fringe presentations on work in progress new ideas as well as demonstrations and concerns that certain common practices in concurrency are harmful are also included in these proceedings The book will be of interest to all those whose work involves concurrent and parallel systems

Models for Concurrency Uri Abraham, 2020-08-26 Concurrent systems are generally understood in terms of behavioral notions Models for Concurrency analyzes the subject in terms of events and their temporal relationship rather than on global states It presents a comprehensive analysis of model theory applied to concurrent protocols and seeks to provide a theory of concurrency that is both intuitively appealing and rigorously based on mathematical foundations The book is divided into three main sections The first introduces the required concepts from model theory details the structures that are used to model concurrency gives an in depth description and explanation of the semantics of a simple language that allows concurrent execution of sequential programs and deals with the question of resolving executions into higher level and lower level granularities The second and third sections apply the theory developed to practical examples and an exposition of the producer consumer problem with details of two solutions is given The author also deals with message passing as opposed to shared memory
