The California Deserts Bruce M Pavlik, 2008-07-02 This highly readable spectacularly illustrated compendium is an ecological journey into a wondrous land of extremes The California Deserts explores the remarkable diversity of life in this harsh yet fragile quarter of the Golden State In a rich narrative it illuminates how that diversity created by drought and heat has evolved with climate change since the Ice Ages Along the way we find there is much to learn from each desert species whether it is a cactus pupfish tortoise or bighorn sheep about adaptation to a warming arid world The book tells of human adaptation as well and is underscored by a deep appreciation for the intimate knowledge acquired by native people during their 12 000 year desert experience In this sense the book is a journey of rediscovery as it reflects on the ways that knowledge has been reclaimed and amplified by new discoveries The book also takes the measure of the ecological condition of these deserts today presenting issues of conservation management and restoration With its many sidebars photographs and featured topics The California Deserts provides a unique introduction to places of remarkable and often unexpected beauty

Desert Meteorology Thomas T. Warner, 2009-01-18 Aridity prevails over more than one third of the land area of the Earth and over a significant fraction of the oceans as well Yet to date there has been no comprehensive reference volume or textbook dealing with the weather processes that define the character of desert areas Desert Meteorology fills this gap by treating all aspects of desert weather such as large scale and local scale causes of aridity precipitation characteristics in deserts dust storms floods climate change in deserts precipitation processes desertification land surface physics of deserts numerical modelling of desert atmospheres and the effect of desert weather on humans A summary is provided of the climates and surface properties of the desert areas of the world The book is written with the assumption that the reader has only a basic knowledge of meteorology physics and calculus making it useful to those in a wide range of disciplines It includes review questions and problems for the student This comprehensive volume will satisfy all who need to know more about the weather and climate of arid lands It will appeal especially to advanced students and researchers in environmental science meteorology physical geography hydrology and engineering

Desert Biomes Joyce A. Quinn, 2008-12-30 This volume in the Greenwood Guides to Biomes of the World focuses on deserts the seemingly desolate but actually quite lively regions that are home to some of the most interesting and beautiful flora and fauna in the world Desert Biomes examines three different types of biomes warm hot deserts such as the Mojave and Sahara deserts cold deserts such as Patagonia in South America and the West Coast Fog Desert biomes which occur on certain regions of the western edge of major continents The volumes examines how these biomes are unique in terms of their vegetation geographical distribution soil challenges posed by the environment adaptation of the plants and animals to the environment and conservation efforts Maps photos diagrams drawings and tables accompany the text as do sidebars that

highlight habitats species and ecological relationships The volume includes a bibliography of accessible resources for further research

Energetics of Desert Invertebrates Harold Heatwole, 2012-12-06 Desert invertebrates live in an environment where resources alternate unpredictably between brief periods of plenty and prolonged scarcity This book describes the adaptive strategies of desert invertebrates in acquiring energy and sustaining life under such vicissitudes Some cooperate in foraging others compete for resources Some are nomadic and migrate to more favorable sites as conditions change Others conserve energy by going into a deep dormancy until better conditions return Still others store food during plenty and retreat underground during less favorable times The adaptive modes of husbanding scarce energy resources are diverse and lead to an appreciation of the intricate interactions of animals living near their environmental limits

Ecophysiology of Desert Arthropods and Reptiles John L. Cloudsley-Thompson, 2012-12-06 Ecophysiology of Desert Arthropods and Reptiles starts with a new classification of the world's deserts based upon the type of precipitation and the effect on their faunas of arthropods and reptiles This is followed by an account of microclimates and the avoidance of environmental extremes Whereas thermoregulation is primarily behavioural responses to water shortage are largely physiological Seasonal activity and phenology are described adaptations for burrowing the avoidance of enemies and defence are also outlined A comparative account of interspecific relationships feeding specializations and species diversity in the two taxa is described The purpose of the book is to provide a new and up to date analysis that will stimulate further research along these lines

Southwestern Desert Resources William L. Halvorson, Cecil R. Schwalbe, Charles van Riper, 2023-01-10 The southwestern deserts stretch from southeastern California to west Texas and then south to central Mexico The landscape of this region is known as basin and range topography featuring to sky islands of forest rising from the desert lowlands which creates a uniquely diverse ecology The region is further complicated by an international border where

governments have caused difficulties for many animal populations This book puts a spotlight on individual research projects which are specific examples of work being done in the area and when they are all brought together to shed a general light of understanding the biological and cultural resources of this vast region so that those same resources can be managed as effectively and efficiently as possible The intent is to show that collaborative efforts among federal state agency university and private sector researchers working with land managers provides better science and better management than when scientists and land managers work independently
