Existing Default Values and Recommendations for Exposure Assessment Nordiska Ministerrådet,2012 Abstract Default values are often used in exposure assessments e g in modelling because of lack of actually measured data The quality of the exposure assessment outcome is therefore heavily dependent on the validity and representativeness this input data Today the used default factors consist of a wide range of more or less well documented values originating from many different sources The purpose of this report is to give an overview and to evaluate exposure factors that are currently used by the authorities and industry in the exposure assessments for both adults occupational and consumer exposure and children in relation to REACH Another important purpose of the report is to contribute towards a further harmonisation of exposure factors by giving recommendations of most valid and representative defaults These recommendations can be used besides REACH also in biocides and plant

protection products exposure assessments The exposure default values were collected from the relevant European sources ECHA Conexpo EUSES Biocide TNsG ECETOC ExpoFacts as well as from WHO and US EPA The following key default factors selected to the evaluation body weight body surface area inhalation rate soil and dust ingestion drinking water food intake non dietary ingestion factors lifetime expectancy activity factors and consumer products
