Representation Theory Current Studies In Linguistics:

Representation Theory Edwin Williams, 2002-12-20 In this theoretical monograph Edwin Williams demonstrates that when syntax is economical it economizes on shape distortion rather than on distance According to Williams this new notion of economy calls for a new architecture for the grammatical system in fact for a new notion of derivation The new architecture offers a style of clausal embedding the Level Embedding Scheme that predictively ties together the locality reconstructive behavior and target type of any syntactic process in a way that is unique to the model Williams calls his theory Representation Theory to put the notion of economy at the forefront Syntax in this theory is a series of representations of one sublanguage in another

Current Issues in Generative Hebrew Linguistics Sharon Armon-Lotem, Gabi Danon, Susan Deborah Rothstein, 2008 This volume presents a collection of specially commissioned papers devoted to analyzing the linguistics of Modern Hebrew from a number of perspectives Various aspects of Modern Hebrew grammar are discussed including the structure of the lexicon grammatical features and inflectional morphology as well as the grammaticalization of semantic and pragmatic distinctions The psycholinguistic issues addressed include the acquisition of morphological knowledge the pro drop parameter and question formation as well as language use in hearing impaired native speakers The collection of these papers together in a single volume allows these phenomena to be considered not in isolation but in the context of the grammatical system of which the language is an expression As a consequence more general issues connected to Modern Hebrew begin to emerge such as the role of the inflectional morphological system in the grammar and a rich set of facts and analyses relevant for many related issues are made available to the reader

Language Use and Linguistic Structure. Proceedings of the Olomouc Linguistics Colloquium 2021 Janebová, Markéta, Emonds, Joseph, Veselovská, L., The latest volume of OLINCO proceedings is a selected set of papers that grew from presentations at OLINCO 2021 the international Olomouc Linguistics Colloquium held at Palacky University in June 2021 The nineteen papers collected here are unified by the topic of the colloquium Language Use and Linguistic Structure in that they all in one way or the other address the central questions of the study of human language They all use standard scientific methodology and theory and solidly researched empirical evidence in favor of formalized structural representations of the language system

The Present in Linguistic Expressions of Temporality Marie-Eve Ritz, 2023-11-30 This book offers a comprehensive examination of Present Time Expressions PTEs illustrating how a more informed understanding of their semantic and pragmatic representations can offer unique insights into the temporal systems of languages The volume takes as its point of departure the notion that tenses aspectual viewpoint markers and temporal expressions have a semantic meaning which is further pragmatically enriched and manipulated in use by speakers Building on this foundation the book introduces current theories on the linguistic expression of temporality toward better highlighting the need for further understanding of PTEs encompassing tenses of the present and words such as now The volume draws on data from Australian English and Indigenous Australian languages to support its

goal of arriving at a theory of the flexibility of uses of PTEs and their centrality in language and highlight the implications for future research on pragmatic and semantic change This book will be of particular interest to graduate students and researchers in semantics pragmatics discourse analysis and philosophy of language as well as those interested in research on Indigenous Australian Languages and Australian English *Disability and Social Representations Theory* Vinaya Manchaiah, Berth Danermark, Per Germundsson, Pierre Ratinaud, 2019-05-30 *Disability and Social Representations Theory* provides theoretical and methodological knowledge to uncover the public perception of disabilities Over the last decade there has been a significant shift from body to environment and the relation between the two when understanding the phenomenon of disabilities The current trend is to view disabilities as the outcome of this interaction in short from a biopsychosocial perspective This has called for research based on frameworks that incorporate both the body and the environment There is a great corpus of knowledge of the functions of a body and a growing corpus of environmental factors such as perceptions among specific groups of persons towards disabilities However there is a lack of knowledge of the perception of disabilities from a general population This book offers an insight into how we can broaden our understanding of disability by using Social Representations Theory with specific examples from studies on hearing loss The authors highlight that attitudes and actions are outcomes of a more fundamental disposition i e social representation towards a phenomenon like disability This book is written assuming the reader has no prior knowledge of Social Representations Theory It will be of interest to all scholars students and professionals working in the fields of disability studies health and social care and sociology

Advances in formal Slavic linguistics 2018 Andreas Blümel, Jovana Gajić, Ljudmila Geist, Uwe Junghanns, Hagen Pitsch, 2021-09-09 *Advances in Formal Slavic Linguistics 2018* offers a selection of articles that were prepared on the basis of talks presented at the conference Formal Description of Slavic Languages FDSL 13 or at the parallel Workshop on the Semantics of Noun Phrases which were held on December 5 7 2018 at the University of Göttingen The volume covers a wide array of topics such as situation relativization with adverbial clauses causation concession counterfactuality condition and purpose clause embedding by means of a correlate agreeing vs transitive need constructions clitic doubling affixation and aspect evidentiality and mirativity pragmatics coming with the particle li uniqueness definiteness maximal interpretation exhaustivity kinds and subkinds bare nominals multiple determination quantification demonstratives possessives complex measure nouns and the NP DP parameter The set of object languages comprises Russian Czech Polish Bulgarian Macedonian Serbo Croatian and Torlak Serbian The numerous topics addressed demonstrate the importance of Slavic linguistics The original analyses prove that substantial progress has been made in major fields of research **Corpora and Cross-Linguistic Research**, 2023-11-27 In recent years there has been increasing interest in the development and use of bilingual and multilingual corpora As Karin Aijmer writes in this book The contrastive or comparative perspective makes it possible to dig deeper and to ask new questions about the relationship between languages with the aim of sharpening our

conceptions of cross linguistic correspondences and adding to our knowledge of the languages compared The papers in this volume are a showcase of the great variety of purposes to which bilingual and multilingual corpora can be put They do not only lend themselves to descriptive and applied approaches but are also suitable for theory oriented studies The range of linguistic phenomena covered by the various approaches is very wide the papers focus on fields of research like syntax discourse semantics information structure lexis and translation studies The range of languages studied comprises English Norwegian Swedish German Dutch and Portuguese In addition to purely linguistic papers there are contributions on computer programs developed for the compilation and use of bilingual and multilingual corpora

Grammatical theory: From transformational grammar to constraint-based approaches (Fifth revised edition) Stefan Müller, 2023-01-23 This book introduces formal grammar theories that play a role in current linguistic theorizing Phrase Structure Grammar Transformational Grammar Government Binding Generalized Phrase Structure Grammar Lexical Functional Grammar Categorical Grammar Head Driven Phrase Structure Grammar Construction Grammar Tree Adjoining Grammar The key assumptions are explained and it is shown how the respective theory treats arguments and adjuncts the active passive alternation local reorderings verb placement and fronting of constituents over long distances The analyses are explained with German as the object language The second part of the book compares these approaches with respect to their predictions regarding language acquisition and psycholinguistic plausibility The nativism hypothesis which assumes that humans possess genetically determined innate language specific knowledge is critically examined and alternative models of language acquisition are discussed The second part then addresses controversial issues of current theory building such as the question of flat or binary branching structures being more appropriate the question whether constructions should be treated on the phrasal or the lexical level and the question whether abstract non visible entities should play a role in syntactic analyses It is shown that the analyses suggested in the respective frameworks are often translatable into each other The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured

Empirical Multimodality Research Jana Pflaeging, Janina Wildfeuer, John A. Bateman, 2021-11-08 This volume advances the data based study of multimodal artefacts and performances by showcasing methods and results from the latest endeavors in empirical multimodal research representing a vibrant international and interdisciplinary research community The collated chapters identify and seek to inspire novel mixed method approaches to investigate meaning making mechanisms in current communicative artifacts designs and contexts while attending to their immersive aesthetic and ideological dimensions Each contribution details innovative aspects of empirical multimodality research offering insights into challenges evolving from quantitative approaches particular corpus work results from eye tracking and psychological experiments and analyses of dynamic interactive experiences The approaches and results presented foreground the inherent multidisciplinary nature and implications of multimodality renegotiating concepts across linguistics media studies social semiotics game studies and

design With this the volume will inform both current and future developments in theory methods and transdisciplinary contexts and become a landmark reference for anyone interested in the empirical study of multimodality *Advances in Generative Lexicon Theory* James Pustejovsky, Pierrette Bouillon, Hitoshi Isahara, Kyoko Kanzaki, Chungmin Lee, 2012-12-18 This collection of papers takes linguists to the leading edge of techniques in generative lexicon theory the linguistic composition methodology that arose from the imperative to provide a compositional semantics for the contextual modifications in meaning that emerge in real linguistic usage Today's growing shift towards distributed compositional analyses evinces the applicability of GL theory and the contributions to this volume presented at three international workshops GL 2003 GL 2005 and GL 2007 address the relationship between compositionality in language and the mechanisms of selection in grammar that are necessary to maintain this property The core unresolved issues in compositionality relating to the interpretation of context and the mechanisms of selection are treated from varying perspectives within GL theory including its basic theoretical mechanisms and its analytical viewpoint on linguistic phenomena The Boundaries of Babel, second edition Andrea Moro, 2015-11-20 The new edition of a pioneering book that examines research at the intersection of contemporary theoretical linguistics and the cognitive neurosciences In *The Boundaries of Babel* Andrea Moro describes an encounter between two cultures contemporary theoretical linguistics and the cognitive neurosciences As a leading theoretical linguist in the generative tradition and also a neuroscientist Moro is uniquely equipped to tell this story Moro examines what he calls the hidden revolution in contemporary science the discovery that the number of possible grammars is not infinite and that their number is biologically limited This will require us to rethink not just the fundamentals of linguistics and neurosciences but also our view of the human mind Moro searches for neurobiological correlates of the boundaries of Babel the constraints on the apparent chaotic variation in human languages by using an original experimental design based on artificial languages exploiting neuroimaging techniques This second edition includes a new chapter in which Moro extends the exploration of the boundaries of Babel in search of the source of order with which all human languages are endowed Reflecting on the emerging methodology that obtains physiological data from awake brain surgery Moro shifts from considering where the neurophysiological processes underlying linguistic competence take place that is where neurons are activated to considering the neuronal code involved in these processes that is what neurons communicate to each other This edition also features a substantive new foreword by Noam Chomsky synthesizing the major issues theoretical syntax will face in the near future Representing Direction in Language and Space Emile van der Zee, J. M. Slack, 2003 This book considers how it is possible for people to use directions like above the table or over the city How does our brain or any other information processing system represent a direction as a spatial entity And how is it possible to link such a representation to language so that we talk about a direction we have in mind When we look at or imagine a scene what entities can be employed for representing a direction and what are the parts in language that

can be used to talk about directions This book brings together research from linguistics psychology philosophy computer science anthropology and neuroscience to answer these intriguing questions By considering direction representation across different languages and in different information processing systems this book gives an overview of the main issues in this area for both the interested novice and the specialized researcher

Natural Language Semantics Brendan S. Gillon, 2019-03-12 An introduction to natural language semantics that offers an overview of the empirical domain and an explanation of the mathematical concepts that underpin the discipline This textbook offers a comprehensive introduction to the fundamentals of those approaches to natural language semantics that use the insights of logic Many other texts on the subject focus on presenting a particular theory of natural language semantics This text instead offers an overview of the empirical domain drawn largely from standard descriptive grammars of English as well as the mathematical tools that are applied to it Readers are shown where the concepts of logic apply where they fail to apply and where they might apply if suitably adjusted The presentation of logic is completely self contained with concepts of logic used in the book presented in all the necessary detail This includes propositional logic first order predicate logic generalized quantifier theory and the Lambek and Lambda calculi The chapters on logic are paired with chapters on English grammar For example the chapter on propositional logic is paired with a chapter on the grammar of coordination and subordination of English clauses the chapter on predicate logic is paired with a chapter on the grammar of simple independent English clauses and so on The book includes more than five hundred exercises not only for the mathematical concepts introduced but also for their application to the analysis of natural language The latter exercises include some aimed at helping the reader to understand how to formulate and test hypotheses

Encoding and Navigating Linguistic Representations

in Memory Claudia Felser, Colin Phillips, Matthew Wagers, 2017-03-22 Successful speaking and understanding requires mechanisms for reliably encoding structured linguistic representations in memory and for effectively accessing information in those representations later Studying the time course of real time linguistic dependency formation provides a valuable tool for uncovering the cognitive and neural basis of these mechanisms This volume draws together multiple perspectives on encoding and navigating structured linguistic representations to highlight important empirical insights and to identify key priorities for new research in this area

Handbook of Linguistic Annotation Nancy Ide, James Pustejovsky, 2017-06-16

This handbook offers a thorough treatment of the science of linguistic annotation Leaders in the field guide the reader through the process of modeling creating an annotation language building a corpus and evaluating it for correctness Essential reading for both computer scientists and linguistic researchers Linguistic annotation is an increasingly important activity in the field of computational linguistics because of its critical role in the development of language models for natural language processing applications Part one of this book covers all phases of the linguistic annotation process from annotation scheme design and choice of representation format through both the manual and automatic annotation process evaluation and iterative improvement of annotation accuracy The second part of the book includes case studies of annotation projects across the spectrum of linguistic annotation types including morpho syntactic tagging syntactic analyses a range of semantic analyses semantic roles named entities sentiment and opinion time and event and spatial analyses and discourse level analyses including discourse structure co reference etc Each case study addresses the various phases and processes discussed in the chapters of part one
