Reproductive Technologies Gender Motherhood And Medicine Feminist:

Reproductive Technologies Michelle Stanworth, 1987-01-01 The creation of test tube babies acted as a spur to public debate about the implications of research on embryos in vitro fertilization surrogate motherhood and the whole range of technologies concerned with human reproduction The scope of reproductive technologies examined in this volume from techniques for the medical management of childbirth to genetic engineering is such that few women in the western world and smaller and smaller numbers in the third world escape their influence What then is their impact on the process of reproduction on family life and particularly on women *The Gendered Cyborg* Fiona Hovenden, Linda Janes, Gill Kirkup, Kathryn Woodward, 2013-09-13 The Gendered Cyborg explores the relationship between representation technoscience and gender through the metaphor of the cyborg The contributors argue that the figure of the cyborg offers ways of thinking about the relationship between culture and technology people and machines which disrupt the power of science to enforce the categories through which we think about being human male and female Taking inspiration from Donna Haraway's groundbreaking Manifesto for Cyborgs the articles consider how the cyborg has been used in cultural representation from reproductive technology to sci fi and question whether the cyborg is as powerful a symbol as is often claimed The different sections of the reader explore the construction of gender categories through science the interaction of technoscience and gender in contemporary science fiction film such as Blade Runner and the Alien series debates around modern reproductive technology such as ultrasound scans and IVF assessing their benefits and constraints for women issues relating to artificial intelligence and the internet **Feminism & Bioethics : Beyond Reproduction** Susan M. Wolf Faculty Associate at the Center for Biomedical Ethics and Associate Professor of Law and Medicine University of Minnesota Law School, 1996-03-21 Bioethics has paid surprisingly little attention to the special problems faced by women and to feminist analyses of current health care issues other than reproduction Feminism Bioethics Beyond Reproduction aims to counterbalance this one sided approach A breakthrough volume of original essays authored by leading figures in bioethics and feminist theory it moves beyond reproduction and nursing taking bioethics into new territory The book starts with an investigation of the relationship between feminism and bioethics and introduces different approaches to the problem Chapters stress the importance of liberal feminism which prefers feminist over feminine analysis integrate the experience of women of color draw from the women's self help movement and apply feminist standpoint theory In the second part of the book contributors view various bioethical problems from a feminist perspective euthanasia AIDS the definition of health doctor patient communication the Human Genome Project the conduct of biomedical research and health care reform They examine the pros and cons of the application of gender and feminism to bioethics This provocative volume is bound to change and broaden the way bioethicists students patients and the public consider bioethical issues *Maternities and Modernities* Kalpana Ram, Margaret Jolly, 1998-02-26 A wide ranging comparative study of concepts of motherhood *Staging Motherhood* J.

Komporal, 2006-10-31 Focusing on post 1956 British women playwrights this book questions to what extent transformations in women's lives have impacted on theatre. Contributing to a range of discourses including gender studies, cultural studies and theatre and performance studies, this timely volume is crucial to our understanding of women's drama in this period.

Women, Medicine, Ethics and the Law Susan Sherwin, Barbara Parish, 2020-09-10 This title was first published in 2002. A collection of articles focused on women within a general study of medicine, ethics and the law. Topics covered include areas where the institutions of medicine, ethics and the law intersect in women's reproductive and sexual lives, the impact of legal policies and dominant ethical beliefs on many aspects of women's health and the health practices and policies of bioethics and health law. The editors recognise that it is important not to lose sight of social differences other than gender such as race, ethnicity, class, age, sexuality, religion, level of physical and mental ability and family relationships. In their approach they seek to consider the lives and experiences of women as primary. Hence they focus on the question of how women's encounters with the health care system are structured by gender and other socially significant dimensions of their lives rather than the question of how women differ from the male norm.

Feminism in Twentieth-Century Science, Technology, and Medicine Angela N. H. Creager, Elizabeth Lunbeck, Londa Schiebinger, 2001-11 What useful changes has feminism brought to science? Feminists have enjoyed success in their efforts to open many fields to women as participants. But the effects of feminism have not been restricted to altering employment and professional opportunities for women. The essays in this volume explore how feminist theory has had a direct impact on research in the biological and social sciences, in medicine and in technology, often providing the impetus for fundamentally changing the theoretical underpinnings and practices of such research. In archaeology, evidence of women's hunting activities suggested by spears found in women's graves is no longer dismissed; computer scientists have used feminist epistemologies for rethinking the human interface problems of our growing reliance on computers. Attention to women's movements often tends to reinforce a presumption that feminism changes institutions through critique from without. This volume reveals the potent but not always visible transformations feminism has brought to science, technology and medicine from within. Mahoney, Emily Martin, Ruth Oldenziel, Nelly Oudshoorn, Carroll Pursell, Karen Rader, Alison Wylie.

The Impossibility of Motherhood Patrice DiQuinzio, 1999-09-13 An adequate analysis of experiences and situations specific to women especially mothering requires consideration of women s difference A focus on women s difference however jeopardizes feminism s claims of women s equal individualist subjectivity and risks recuperating the inequality and oppression of women especially the view that all women should be mothers want to be mothers and are most happy being mothers This book considers how thinkers including Simone de Beauvoir Julia Kristeva Nancy Choderow and Adrienne Rich struggle to negotiate this dilemma of difference in analyzing mothering encompassing the paradoxes concerning embodiment gender and representation they encounter Patrice Di Quinzio shows that mothering has been and

will continue to be an intractable problem for feminist theory itself and suggests the political usefulness of an explicitly paradoxical politics of mothering
