**The Eponym Dictionary of Amphibians** Bo Beolens,Michael Watkins,Michael Grayson,2013-04-22 New species of animal and plant are being discovered all the time When this happens the new species has to be given a scientific Latin name in addition to any common vernacular name In either case the species may be named after a person often the discoverer but sometimes an individual they wished to honour or perhaps were staying with at the time the discovery was made Species names related to a person are eponyms Many scientific names are allusive esoteric and even humorous so an eponym dictionary is a valuable resource for anyone amateur or professional who wants to decipher the meaning and glimpse the history of a species name Sometimes a name refers not to a person but to a fictional character or mythological figure The Forest Stubfoot Toad *Atelopus farci* is named after the FARC a Colombian guerrilla army who found refuge in the toad s habitat and thereby it is claimed protected it Hoipollo s Bubble nest Frog *Pseudophilautus hoipolloi* was named after the Greek for the many but someone assumed the reference was to a Dr Hoipollo Meanwhile the man who has everything will never refuse an eponym Sting s Treefrog *Dendropsophus stingi* is named after the rock musician in honour of his commitment and efforts to save the rainforest Following the success of their Eponym Dictionary of Reptiles the authors have joined forces to give amphibians a similar treatment They have tracked

down 1 609 honoured individuals and composed for each a brief pithy biography In some cases these are a reminder of the courage of scientists whose dedicated research in remote locations exposed them to disease and even violent death The eponym ensures that their memory will survive aided by reference works such as this highly readable dictionary Altogether 2 668 amphibians are listed Hormones and Reproduction of Vertebrates, Volume 3 David O. **Cooperative Breeding in Birds** Peter B. Stacey, Walter D. Koenig, 1990-04-19 Cooperative breeding is an unusual kind of social behaviour found in a few hundred species worldwide in which individuals other than the parents help raise young Understanding the apparently altruistic behaviour of helpers has provided numerous challenges to evolutionary biologists This book includes detailed first hand summaries of many of the major empirical studies of cooperatively breeding birds It provides comparative information on the demography social behaviour and behavioural ecology of these unusual species and explores the diversity of ideas and the controversies which have developed in this field The studies are all long term and consequently the book summarises some of the most extensive studies of the behaviour of marked individuals ever undertaken Graduate students and research workers in ornithology sociobiology behavioural ecology and evolutionary biology will find much of value in this book

**Molecular Neuroendocrinology** David Murphy, Harold Gainer, 2016-01-19 Molecular Neuroendocrinology From Genome to Physiology provides researchers and students with a critical examination of the steps being taken to decipher genome complexity in the context of the expression regulation and physiological functions of genes in neuroendocrine systems The 19 chapters are divided into four sectors A describes and explores the genome its evolution expression and the mechanisms that contribute to protein and hence biological diversity B discusses the mechanisms that enhance peptide and protein diversity beyond what is encoded in the genome through post translational modification C considers the molecular tools that today s neuroendocrinologists can use to study the regulation and function of neuroendocrine genes within the context of the intact organism D presents a range of case studies that exemplify the state of the art application of genomic technologies in physiological and behavioural experiments that seek to better understand complex biological processes Written by a team of internationally renowned researchers Both print and enhanced e book versions are available Illustrated in full colour throughout This is the third volume in a new Series Masterclass in Neuroendocrinology a co publication between Wiley and the INF International Neuroendocrine Federation that aims to illustrate highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology Series Editors John A Russell University of Edinburgh UK and William E Armstrong The University of Tennessee USA

Reproductive Science and Integrated Conservation W. V. Holt, 2003 Reproduction is essential to the continuation and evolution of life on this planet and is therefore a centrally important process in the conservation of wildlife However reproductive mechanisms are well understood in only a handful of vertebrate species mostly domestic livestock and laboratory animals This means that attempts to develop and implement management policies for wildlife conservation and especially for endangered species that by definition are difficult to study are often based on poor data or no data at all In Reproductive Science and Integrated Conservation leading authorities provide glimpses of reproductive diversity in fishes amphibians reptiles birds and mammals Conservation plans are founded on the assumption that reproduction will be successful but what if it fails This book reviews the many factors that influence reproduction including genetics behaviour and nutrition and experts assess the potential conservation relevance of the recent rapid advances in reproductive technology and medicine
