Requisitos En Oftalmología Glaucoma:

Oftalmología Pediátrica y Estrabismo Kenneth W. Wright, 2001 Obra de la serie Requisitos en Oftalmología que trata una especialidad de enorme interés como es la oftalmología pediátrica. Los contenidos de este libro van mucho más allá de tratar ojos pequeños ya que las enfermedades oculares pediátricas requieren un conocimiento profundo de la embriología al desarrollo neurovisual, la ambliopía y el estrabismo. Esta obra consigue explicar con un texto claro y fácil de comprender todas estas materias difíciles y de gran interés para el estudiante y el residente ofreciendo la información más relevante desde el punto de vista clínico sobre cada una de ellas.

Retina,

Coroides y Vitreo Jose S. Pulido, 2003-04 Obra de la serie Requisitos en Oftalmología dedicada al segmento posterior del ojo retina coroides y vitreo que revisa los trastornos más frecuentes de estas zonas del ojo que resultan los más difíciles de explorar como la degeneración macular producida por la edad, tratamiento del trauma y desprendimiento de retina, retinopatía diabética, tratamiento de infecciones, etc., y la evaluación de las técnicas de imagen y otras modalidades de diagnóstico. Como en todas las obras de esta serie destaca su carácter práctico, la abundancia de ilustraciones, esquemas, dibujos quirúrgicos y cuadros resumen y en esta obra en concreto el uso de numerosas fotografías en color con las últimas tecnologías de diagnóstico por imagen.

Adler Fisiología Del Ojo Paul L. Kaufman, Albert Alm, 2003-09 Décima edición de la obra Adler Fisiología del ojo, la referencia clásica durante décadas en esta área. Un recurso perfecto para estudiantes de cara a comprender los conceptos fundamentales acerca de la función del ojo, incluyendo la óptica, electrofisiología del sistema retiniano, agudeza visual, circulación ocular, etc., y a preparar sus exámenes y para profesionales que quieran hacer una consulta rápida. Esta edición ha sido exhaustivamente revisada para recoger los numerosos avances que se han producido en los temas que viene abarcando habitualmente este libro, ya que la cantidad de información disponible ha aumentado de manera espectacular debido a que la línea que separa la fisiología clásica de la biología celular e incluso molecular es cada vez más difusa. Como novedades en esta edición se ha estructurado de manera más racional toda la información sobre órganos extraoculares y el cristalino. También se trata más en profundidad los neurocircuitos de la retina, la agudeza visual, el desarrollo de la visión en la infancia, la visión a color, la circulación ocular, el control neurológico de los movimientos del ojo y

temas de gran actualidad como la anatomía y fisiología facial. Incluye también un encarte a color totalmente nuevo con microfotografías de la fisiología normal y patológica, ilustraciones anatómicas, fotografías de fondos de ojos y fotografías clínicas.
