Broadly Engaged Team Science in Clinical and Translational Research Debra Lerner, Marisha E. Palm, Thomas W. Concannon, 2022-02-27 Despite the large U S investment in health science and the vast and growing body of peer reviewed research findings it has produced a compelling body of evidence suggests that research too often has been slow inefficient and fallen short of desired impacts on health A key question is how research might be changed to be more innovative less wasteful and more responsive to unmet health needs One emerging response within clinical and translational science is to advance an approach that attempts to close the gap between research scientists and key stakeholders the individuals and groups responsible for or affected by health related decisions Broadly engaged team science promises to support this aim by transforming the gold standard multi disciplinary team science to include key stakeholders in activities across the research spectrum These new roles and responsibilities range from generating research questions to implementing research projects to aiding in the translation of discoveries from the laboratory to the community A transition to broadly engaged team science reflects the idea that inclusivity and a diversity of perspectives are necessary to achieving progress in addressing complex health issues while representing a new benchmark for ethical research practice This is one of the first collections of papers describing how clinical and translational science researchers are defining and implementing new research practices and the

successes and challenges involved This book represents a first and critical step towards organizing knowledge of broadly engaged team science and advancing the development of evidence based practices Written in an accessible style this book is intended to highlight the breadth of broadly engaged team science within one community motivate researchers and stakeholders to build inclusive teams bring rigor to often informal stakeholder engagement research practices and encourage people to think more broadly about the development of scientific knowledge It includes examples of multi disciplinary broadly engaged team science projects the perspectives of academic leaders about the changes needed to encourage scientists to conduct broadly engaged team science and a resource directory Operations Research A. Unity of Knowledge (in Transdisciplinary Research for Sustainability) - Volume II Gertrude Hirsch Hardon, 2008-12-31 Unity of Knowledge in Transdisciplinary Research for Sustainable Development theme is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias Today there is a social need for a comprehensive unity of knowledge that would provide orientation and ensure action in the context of the complex problems of modern civilization Based on an intellectual need for unity of knowledge different concepts of unity of knowledge have emerged in the course of the history of ideas The intellectual need for unity can be directed at the world science action or the individual It can involve the quest for the unity of the world based

on a principle that is immanent in it the unity of science as a theoretical methodical or epistemological unity the unity of action as a correlation of scientific pragmatic and moral knowledge or finally unity as the educational task of the individual The concepts associated with unity of knowledge can go in two directions The first assumes that there is a unity existing in the world that can be perceived by man It is thought of as an order of being i e an ontological unity of the plurality of phenomena that consist in their common nature The other direction is based on the assumption that unity is a construction of a subject based on its cognitive principles and structures Thus it is not something that can be discovered as an existing objective order and is instead subjective These two volumes present some aspects of Unity of Knowledge in Transdisciplinary Research for Sustainable Development in three parts The purpose of the first part is to trace back the core ideas in transdisciplinary thinking in the history of western philosophy and science to locate socially the concerns of transdisciplinary research and to give an account of the development of transdisciplinary research The second group of chapters deals with methodological and management problems related to transdisciplinary research with regard to problem identification and structuring of research questions with knowledge integration in problem investigation as well as with evaluation An outline of the institutional measures and transformations to enable and support transdisciplinary research is given in the third part Institutional strategies build on organizational arrangements and links across academic institutions in education and research on networks between science and society for joint knowledge production in temporally limited settings of research programs or projects but they also set up new institutions such as centers for advanced studies national offices agencies and networks These two volumes are aimed at a wide spectrum of audiences University and College Students Educators Research Personnel and all those concerned with sustainable development
