Granulomatous Diseases Mary Jane Thomassen, Marc A. Judson, Barbara P. Barna, 2021-02-09 Clinical Manifestations, Pathophysiology, Diagnostic Methods, Imaging and Intervention in Sarcoidosis Ali Nawaz Khan, 2016-12-01 Sarcoidosis is a multisystem granulomatous disease of unknown etiology that is characterised by noncaseous epithelioid cell granulomas which may affect almost any organ in the body Intrathoracic involvement is common and accounts for most of the morbidity and mortality associated with this disease The diagnosis is based on the total exclusion of other granulomatous disorders The organs that are commonly involved are the lymph nodes lungs liver spleen skin and eyes these organs can be involved individually or in combination The correlation of the clinical radiological features along with the pathologic finding of non caseating epithelioid cell granulomas is vital to establish the diagnosis There is no single precise cause attributed to the causation of this disease Genetic factors are suspected due to the observation that racial groups such as African Americans West Indians and Asians have a higher prevalence of sarcoidosis Familial sarcoidosis is well known which may be attributed to genetic factors or the sharing of a similar environment Environmental factors may also play a role by involving the uptake and processing of unknown antigens by the respiratory system Occasional patients with sarcoidosis have an association with primary biliary cirrhosis where the granulomas in both diseases look similar Patients receiving treatment with anti retroviral therapy or interferon alpha might have pulmonary granulomas as in HIV infected patients and leukemia patients retrospectively Sarcoidosis is more prevalent and is a more severe disease in blacks in the United States of America Two thirds of patients with sarcoidosis resolve spontaneously without specific treatment Therapeutic measures when required rely on immune suppression As the symptoms are varied in sarcoidosis the differential diagnosis includes most non specific systemic disorders A chest radiograph CXR is usually the first diagnostic imaging study in patients with respiratory symptoms A CXR is a non invasive modality widely available easy to interpret and when correlated with the clinical findings may be the only imaging required to diagnose pulmonary sarcoidosis A CXR is also the most commonly used imaging technique for follow up in patients with established diagnosis and is reproducible and cost efficient Conventional chest radiography however has its limitations While it may be normal in 5 10% of patients with established sarcoidosis in 25 30% of patients the radiologic changes are nonspecific or atypical reducing the plain film sensitivity In such cases High Resolution CT HRCT is useful in clarifying the diagnosis providing crucial information on the extent of the disease Furthermore HRCT unlike a plain radiograph can readily differentiate active inflammation from irreversible fibrosis **Sarcoidosis and Other Granulomatous Disorders** ,1983 Sarcoidosis Mohammad Hosein Motamedi, 2011-10-21 Sarcoidosis is a type of inflammation that occurs in various locations of the body for no known reason Normally when foreign substances or organisms enter the body the immune system will fight back by activating an immune response Inflammation is a normal part of this immune response but it should subside once the foreign antigen is gone In sarcoidosis the inflammation persists and some of the immune cells form abnormal clumps of tissue called granulomas The disease can affect any organ in the body but

it is most likely to occur in the lungs It can also affect the skin eyes liver or lymph nodes Although the cause of sarcoidosis is not known research suggests that it may be due to an extreme immune response or extreme sensitivity to certain substances It also seems to have a genetic component as well and tends to run in families Sarcoidosis most commonly develops in people between 20 and 50 years of age African Americans are somewhat more likely to develop sarcoidosis than Caucasians and females are somewhat more likely to develop sarcoidosis than males The symptoms of sarcoidosis depend on the organ involved This book deals with the diagnosis and treatment of this mysterious disease of unknown etiology *Sarcoidosis* Donald N Mitchell, Athol Wells, Stephen G Spiro, David R Moller, 2012-02-24 Highly Commended BMA Medical Book Awards 2013 Sarcoidosis represents a major challenge for physicians not just in respiratory medicine but across a range of specialties This book with a multidisciplinary authorship of the highest standard presents the most up to date thinking on all aspects of the condition from epidemiology to clinical manifestations and treatment options Full coverage is given to both respiratory and non respiratory aspects The basic science that underlies the disease and its progression is evaluated in detail and placed into its correct clinical context Possible future advances are covered in a concluding section The editors all leading figures in the field with international reputations have compiled the definitive work on the subject in a single volume The book is fully comprehensive and evidence based and will be an essential addition to the bookshelves of all whose practice involves the care and treatment of patients with sarcoidosis Dail and Hammar's Pulmonary Pathology David H. Dail, Samuel P. Hammar, 2013-06-29 The exponential increase in knowledge in all branches Pulmonary Pathology written by multiple authors of science including pathology has resulted in an avalanche working in their respective areas of interest is intended to replace scientific literature which is now too extensive to provide the reader with up to date information In for most people to digest This certainly applies to the years ahead new lung diseases will be discovered field of pulmonary pathology One has only to reflect some of which may still be confused with classical diseases on the better understanding of many disease processes of great antiquity For example during the 1970s and the description of many new diseases in the lung Legionella pneumonia has been separated from pneumonia in the last 40 years to appreciate these changes For mycoplasmal lobar pneumonia with which it was almost this reason alone a summary of the present knowledge certainly confused in the past Although some of the conditions discussed in this is both essential and timely Pathology is undergoing a metamorphosis with new books are uncommon or even rare ignorance of these diagnostic methods employing antibodies and other rare diseases is no longer acceptable Pathologists newly developed techniques to make diagnoses more involved in day to day practice are expected to be precise Until recently these new techniques have had knowledge of ongoing advances in their field
