SCHOLARLY PUBLISHING

THE ELECTRONIC FRONTIER

Today, a stable medium for scholarly publication is hard to come by. The traditional print medium is being replaced by electronic media. When the term "electronic publication" is used it generally means just that, a publication in a form suitable for use with a computer. It is more likely that these publications actually exist in the form of magnetic fields on some magnetisable medium, or in the form of physical, chemical or magnetic transformations of some medium that are detectable by means of light (a laser beam). It is the apparatus that permits humans to access and read the publications that is electronic.

The State of Scholarly Publishing Harold Laski, 2017-07-05 For decades university presses and other scholarly and professional publishers in the United States played a pivotal role in the transmission of scholarly knowledge. Their books and journals became the gold standard in many academic fields for tenure promotion and merit pay. Their basic business model was successful since this diverse collection of presses had a unique value proposition. They dominated the scholarly publishing field with preeminent sales in three major markets or channels of distribution: libraries and institutions, college and graduate school adoptions, and general readers, i.e. sales to general retailers. Yet this insulated world changed abruptly in the late 1990s. What happened? This book contains a superb series of articles originally published in *The Journal of Scholarly Publishing* by some of the best experts on scholarly communication in the western hemisphere: Europe, Asia, and Africa. These authors analyze in depth the diverse and exciting challenges and opportunities scholars, universities, and publishers face in what is a period of unusual turbulence in scholarly publishing. The topics given attention include copyrights, the transformation of scholarly publishing from a print format to a digital one, open access, scholarly publishing in emerging nations, problems confronting journals, and information on how certain academic disciplines are coping with the transformation of scholarly publishing. This book is a must read for anyone interested in the scholarly publishing industry's past, its current focus, or future plans and developments.

As we begin a new century the astonishing spread of nationally and internationally accessible computer based communication networks has touched the imagination of people everywhere

Suddenly the Internet is in everyday parlance featured in talk shows in special business technology sections of major newspapers and on the covers of national magazines

If the Internet is a new world of social behavior it is also a new world for those who study social behavior

This volume is a compendium of essays and research reports representing how researchers are thinking about the social processes of electronic communication and its effects in society

Taken together the chapters comprise a first gathering of social psychological research on electronic communication and the Internet

The authors of these chapters work in different disciplines and have different goals research methods and styles

For some the emergence and use of new technologies represent a new perspective on social and behavioral processes of longstanding interest in their disciplines

Others want to draw on social science theories to understand technology

A third group holds to a more activist program seeking guidance through research to improve social interventions using technology in domains such as education mental health and work productivity

Each of these goals has influenced the research questions methods and inferences of the authors and the look and feel of the chapters in this book

Intended primarily for researchers who seek exposure to diverse approaches to studying the human side of electronic communication and the Internet this volume has three purposes to illustrate how scientists are thinking about the social processes and effects of electronic communication to encourage research based contributions to current debates on electronic communication design applications and policies and to suggest by example how studies of electronic communication can contribute to social science itself
