Scientific And Religious Belief:

The Big Questions in Science and Religion Keith Ward, 2008-05 Can religious beliefs survive in the scientific age Are they resoundingly outdated Or is there something in them of great importance even if the way they are expressed will have to change given new scientific context These questions are among those at the core of the science religion dialogue An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge He identifies ten basic questions about the nature of the universe and human life Among these are Does the universe have a goal or purpose Do the laws of nature exclude miracles Can science provide a wholly naturalistic explanation for moral and religious beliefs Has science made belief in God obsolete Are there any good science based arguments for God Ward considers concepts from Buddhism Confucianism Taoism Islam Hinduism Judaism and Christianity while featuring the speculations of cosmologists physicians mathematicians and philosophers **Scientific**

Greg Dawes, James Maclaurin, 2012-12-12 Religious belief once in the domain of the humanities has found a new home in the sciences Promising new developments in the study of religion by cognitive scientists and evolutionary theorists put forward empirical hypotheses regarding the origin spread and character of religious beliefs Different theories deal with different aspects of human religiosity some focus on religious beliefs while others focus on religious actions and still others on the

origin of religious ideas While these theories might share a similar focus there is plenty of disagreement in the explanations they offer This volume examines the diversity of new scientific theories of religion by outlining the logical and causal relationships between these enterprises Are they truly in competition as their proponents sometimes suggest or are they complementary and mutually illuminating accounts of religious belief and practice Cognitive science has gained much from an interdisciplinary focus on mental function and this volume explores the benefits that can be gained from a similar approach to the scientific study of religion Can Scientists Believe Sir Nevill Mott,2013-11-05 In this collection of thought provoking essays a range of distinguished scientists and theologians men and women young and old all with strong scientific training and deeply held religious beliefs in the Judeo Christian tradition give their personal answers They do not always agree the views of each contributor being informed both by their particular scientific expertise and religious affiliation They address a wide range of problems that will interest all concerned to reconcile their own religious beliefs with currently accepted scientific theory and practice The divergences of opinion are as significant as the agreements Positions are thoughtfully explained and make important often novel and illuminating contributions to debate on these great issues

Faith Versus Fact Jerry A. Coyne, 2016-05-17 A superbly argued book Richard Dawkins author of The God Delusion The New York Times bestselling author of Why Evolution is True explains why any attempt to make religion compatible with science is doomed to fail In this provocative book evolutionary biologist Jerry A Coyne lays out in clear dispassionate detail why the toolkit of science based on reason and empirical study is reliable while that of religion including faith dogma and revelation leads to incorrect untestable or conflicting conclusions Coyne is responding to a national climate in which more than half of Americans don't believe in evolution members of Congress deny global warming and long conquered childhood diseases are reappearing because of religious objections to inoculation and he warns that religious prejudices in politics education medicine and social policy are on the rise Extending the bestselling works of Richard Dawkins Daniel Dennett and Christopher Hitchens he demolishes the

Scientism Mikael Stenmark, 2017-03-02 Can science tell us everything there is to know about reality The intellectual and practical successes of science have led some scientists to think that there are no real limits to the competence of science and no limits to what can be achieved in the name of science Accordingly science has no boundaries it will eventually answer all our problems This view and similar views have been called Scientism In this important book scientists views about science and its relationship to knowledge ethics and religion are subjected to critical scrutiny A number of distinguished natural scientists have advocated Scientism in one form or another Francis Crick Richard Dawkins Carl Sagan and Edward O Wilson and their impressive impact both inside and outside the sciences is considered Clarifying what Scientism is this book proceeds to evaluate its key claims expounded in questions such as Is it the case that science can tell us everything there is to know about reality Can science tell us how we morally ought to live and what the meaning of life is Can science in fact be our new religion Ought we to become science believers Stenmark addresses these and similar issues concluding that Scientism is not really science but disguised materialism or naturalism its advocates fail to see this not being sufficiently aware that their arguments presuppose the previous acceptance of certain extra scientific or philosophical beliefs
