### **The Matter of Facts**

Gareth Leng, Rhodri Ivor Leng, 2020-04-14 How biases the desire for a good narrative reliance on citation metrics and other problems undermine confidence in modern science Modern science is built on experimental evidence yet scientists are often very selective in deciding what evidence to use and tend to disagree about how to interpret it In *The Matter of Facts* Gareth and Rhodri Leng explore how scientists produce and use evidence They do so to contextualize an array of problems confronting modern science that have raised concerns about its reliability the widespread use of inappropriate statistical tests a shortage of replication studies and a bias in both publishing and citing positive results Before these problems can be addressed meaningfully the authors argue we must understand what makes science work and what leads it astray The myth of science is that scientists constantly challenge their own thinking But in reality all scientists are in the business of persuading other scientists of the importance of their own ideas and they do so by combining reason with rhetoric Often they look for evidence that will support their ideas not for evidence that might contradict them often they present evidence in a way that makes it appear to be supportive and often they ignore inconvenient evidence In a series of essays focusing on controversies disputes and discoveries the authors vividly portray science as a human activity driven by passion as well as by reason By analyzing the fluidity of scientific concepts and the dynamic and unpredictable development of scientific fields the

authors paint a picture of modern science and the pressures it faces     *The Discoveries* Alan Lightman,2009-05-14 In this captivating and lucid book the bestselling author of Einstein's Dreams chronicles twenty four great discoveries of twentieth century science everything from the theory of relativity to mapping the structure of DNA These discoveries radically changed our notions of the world and our place in it Here are Einstein Fleming Bohr McClintock Pauling Watson and Crick Heisenberg and many others With remarkable insight Lightman charts the intellectual and emotional landscape of the time portrays the human drama of discovery and explains the significance and impact of the work Finally he includes a fascinating and unique guided tour through the original papers in which the discoveries were revealed Here is science writing at its best beautiful lyrical and completely accessible It brings the process of discovery to life before our very eyes     **Flight from Wonder**

Albert Rothenberg,2015 Scientific breakthroughs have had far reaching social and physical effects on modern civilization yet until recently there have been relatively few investigations into the nature of scientific creativity itself Flight from Wonder reports the findings from an empirical study of 42 Nobel laureates in science from the United States and Europe concerning the creative processes that yield scientific innovation To this end Albert Rothenberg designed an interview scheme to delineate the content and sequences of processes that lead scientists to specific creative achievements He conducted interviews with Nobel laureates in the fields of medicine physiology physics and chemistry while carrying out matching interviews with a control group consisting of twelve accomplished engineers on the faculty of a leading engineering university Rothenberg's results demonstrate that the Nobel laureates perform three distinct cognitive creative processes to achieve key formulations and discoveries the detailed nature and structure of these findings were reviewed and corroborated by each of the Nobel laureates To supplement his findings Rothenberg engages with autobiographical accounts and work in progress manuscripts pertaining to the creative discoveries of outstanding scientists of the past including Albert Einstein Charles Darwin Max Planck Niels Bohr Hideki Yukawa and James Watson The book will interest students and general science readers fascinated by the development of scientific inquiry and innovation     **Doing AI**

Richard Heimann,2021-12-14 Artificial intelligence AI has captured our imaginations and become a distraction Too many leaders embrace the oversized narratives of artificial minds outpacing human intelligence and lose sight of the original problems they were meant to solve When businesses try to do AI they place an abstract solution before problems and customers without fully considering whether it is wise whether the hype is true or how AI will impact their organization in the long term Often absent is sound reasoning for why they should go down this path in the first place Doing AI explores AI for what it actually is and what it is not and the problems it can truly solve In these pages author Richard Heimann unravels the tricky relationship between problems and high tech solutions exploring the pitfalls in solution centric thinking and explaining how businesses should rethink AI in a way that aligns with their cultures goals and values As the Chief AI Officer at Cybraics Inc Richard Heimann knows from experience that AI specific strategies are often bad for business Doing AI is his comprehensive guide that will

help readers understand AI avoid common pitfalls and identify beneficial applications for their companies This book is a must read for anyone looking for clarity and practical guidance for identifying problems and effectively solving them rather than getting sidetracked by a shiny new solution that doesn't solve anything ***The Evaluation of Research by Scientometric Indicators*** Peter Vinkler,2010-01-20 Aimed at academics academic managers and administrators professionals in scientometrics information scientists and science policy makers at all levels This book reviews the principles methods and indicators of scientometric evaluation of information processes in science and assessment of the publication activity of individuals teams institutes and countries It provides scientists science officers librarians and students with basic and advanced knowledge on evaluative scientometrics Especially great stress is laid on the methods applicable in practice and on the clarification of quantitative aspects of impact of scientific publications measured by citation indicators Written by a highly knowledgeable and well respected scientist in the field Provides practical and realistic quantitative methods for evaluating scientific publication activities of individuals teams countries and journals Gives standardized descriptions and classification of the main categories of evaluative scientometrics ***The Story of Physics*** Lloyd Motz,Jefferson Hane Weaver,2013-11-21 Traces the development of physics from 2000 years ago to the experimental theories of the 20th century

***Thomas Kuhn*** Alexander Bird,2014-12-18 Thomas Kuhn 1922-96 transformed the philosophy of science His seminal 1962 work *The Structure of Scientific Revolutions* introduced the term paradigm shift into the vernacular and remains a fundamental text in the study of the history and philosophy of science This introduction to Kuhn's ideas covers the breadth of his philosophical work situating *The Structure of Scientific Revolutions* within Kuhn's wider thought and drawing attention to the development of his ideas over time Kuhn's work is assessed within the context of other philosophies of science notably logical empiricism and recent developments in naturalized epistemology The author argues that Kuhn's thinking betrays a residual commitment to many theses characteristic of the empiricists he set out to challenge Kuhn's influence on the history and philosophy of science is assessed and where the field may be heading in the wake of Kuhn's ideas is explored
