Scientific Frontiers in Developmental Toxicology and Risk Assessment National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Developmental Toxicology, 2000-11-21 Scientific Frontiers in Developmental Toxicology and Risk Assessment reviews advances made during the last 10 15 years in fields such as developmental biology molecular biology and genetics It describes a novel approach for how these advances might be used in combination with existing methodologies to further the understanding of mechanisms of developmental toxicity to improve the assessment of chemicals for their ability to cause developmental toxicity and to improve risk assessment for developmental defects For example based on the recent advances even the smallest simplest laboratory animals such as the fruit fly roundworm and zebrafish might be able to serve as developmental toxicological models for human biological systems Use of such organisms might allow for rapid and inexpensive testing of large numbers of chemicals for their potential to cause developmental toxicity presently there are little or no developmental toxicity data available for the majority of natural and manufactured chemicals in use This new approach to developmental toxicology and risk assessment will require simultaneous research on several fronts by experts from multiple scientific disciplines including developmental toxicologists developmental biologists geneticists epidemiologists and biostatisticians *Scientific Frontiers in Developmental Toxicology and Risk Assessment* National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Developmental Toxicology, 2000-12-21 Scientific Frontiers in Developmental Toxicology and Risk Assessment reviews advances made during the last 10 15 years in fields such as developmental biology molecular biology and genetics It describes a novel approach for how these advances might be used in combination with existing methodologies to further the understanding of mechanisms of developmental toxicity to improve the assessment of chemicals for their ability to cause developmental toxicity and to improve risk assessment for developmental defects For example based on the recent advances even the smallest simplest laboratory animals such as the fruit fly roundworm and zebrafish might be able to serve as developmental toxicological models for human biological systems Use of such organisms might allow for rapid and inexpensive testing of large numbers of chemicals for their potential to cause developmental toxicity presently there are little or no developmental toxicity data available for the majority of natural and manufactured chemicals in use This new approach to developmental toxicology and risk assessment will require simultaneous research on several fronts by experts from multiple scientific disciplines including developmental toxicologists developmental biologists geneticists epidemiologists and biostatisticians **Scientific Review of the Proposed Risk Assessment Bulletin from the Office of Management and Budget** National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review the OMB Risk Assessment Bulletin, 2007-04-16 Risk assessments are often used by the federal government to estimate the risk the public may face from such things as exposure to a chemical or the potential

failure of an engineered structure and they underlie many regulatory decisions Last January the White House Office of Management and Budget OMB issued a draft bulletin for all federal agencies which included a new definition of risk assessment and proposed standards aimed at improving federal risk assessments This National Research Council report written at the request of OMB evaluates the draft bulletin and supports its overall goals of improving the quality of risk assessments However the report concludes that the draft bulletin is fundamentally flawed from a scientific and technical standpoint and should be withdrawn Problems include an overly broad definition of risk assessment in conflict with long established concepts and practices and an overly narrow definition of adverse health effects one that considers only clinically apparent effects to be adverse ignoring other biological changes that could lead to health effects The report also criticizes the draft bulletin for focusing mainly on human health risk assessments while neglecting assessments of technology and engineered structures

workable ordinances related to the storage and handling of fuel Each of the cities studied in this volume struggled through protracted debates regarding the regulation of crude petroleum and fuel oil sparked by the famous Spindletop strike of 1901 and the regional oil boom in the decades that followed Municipal governments sought to ensure the safety of their citizens while still reaping lucrative economic benefits from local petroleum industry activities Drawing on historical antecedents such as fire protection engineering the cities of the Gulf South came to adopt voluntary consensual fire codes issued by insurance associations and standards organizations such as the National Board of Fire Underwriters the National Fire Protection Association and the Southern Standard Building Code Conference The culmination of such efforts was the creation of the International Fire Code an overarching fire protection guide that is widely used in the United States Mexico the Caribbean and Central America In devising ordinances Gulf South officials pursued the politics of risk management as they hammered out strategies to eliminate or mitigate the dangers associated with petroleum industries and to reduce the possible consequences of catastrophic oil explosions and fires Using an array of original sources including newspapers municipal records fire insurance documents and risk management literature McSwain demonstrates that Gulf South cities played a vital role in twentieth century modernization
