Work at the Boundaries of Science C.L. Palmer, 2013-06-29 Interdisciplinary inquiry has become more pervasive in recent decades yet we still know little about the conduct of this type of research or the information problems associated with it This book is one of few empirical studies of interdisciplinary knowledge practices It examines how interdisciplinary scientists discover and exchange information and knowledge highlighting how the boundaries between disciplines affect how information is used and how knowledge is constructed It is written for scholars and practitioners with an interest in developing information systems and research environments to foster innovative scientific work Target groups include researchers in information science science studies communication as well as research administrators and information professionals *Knowledges* Ellen Messer-Davidow, David R. Shumway, David Sylvan, 1993 Anyone interested in the relationship between disciplines and today this means everyone should read this collection which is itself a model of interdisciplinarity Stanley Fish Duke University **Exploring the Black Box** Nathan Rosenberg, 1994-03-10 The process of technological change takes a wide variety of forms Propositions that may be accurate when referring to the pharmaceutical industry may be totally inappropriate when applied to the aircraft industry or to computers or forest products The central theme of Nathan Rosenberg's new book is the idea that technological changes are often path dependent in the sense that their form and direction tend to be influenced strongly by the particular sequence of earlier events out of which a new technology has emerged The book advances the understanding of technological change by explicitly recognising its essential diversity and path dependent nature Individual chapters explore the particular features of new technologies in different historical and sectoral contexts This book presents a unique account of how technological change is generated and the

processes by which improved technologies are introduced *Technology and the Pursuit of Economic Growth* David C. Mowery, Nathan Rosenberg, 1991-07-26 Technology's contribution to economic growth and competitiveness has been the subject of vigorous debate in recent years. This book demonstrates the importance of a historical perspective in understanding the role of technological innovation in the economy. The authors examine key episodes and institutions in the development of the U.S. research system and in the development of the research systems of other industrial economies. They argue that the large potential contributions of economics to the understanding of technology and economic growth have been constrained by the narrow theoretical framework employed within neoclassical economics. A richer framework, they believe, will support a more fruitful dialogue among economists, policymakers, and managers on the organization of public and private institutions for innovation. David Mowery is Associate Professor of Business and Public Policy at the School of Business Administration, University of California, Berkeley. Nathan S. Rosenberg is Fairleigh Dickinson Professor of Economics at Stanford University. He is the author of *Inside the Black Box: Technology and Economics* (CUP, 1983).

Studies On Science And The Innovation Process: Selected Works By Nathan Rosenberg Nathan Rosenberg, 2009-08-18 Science and technology have become increasingly intertwined in the twentieth century. However, little attention has been paid to the forces that have brought about this condition. Indeed, many scholars have taken it simply for granted that causality always runs from science to technology. In this groundbreaking book, Rosenberg's research suggests that history and extensive empirical evidence lead to a reality that is far more complex as well as far more interesting. Here, Rosenberg's papers explore a wide range of pertinent issues, especially those connected with the innovative process, including the realms of electric power, electronics, chemicals, aircraft, medicine, instrumentation, and in particular, higher education and the organization of research activities.

Data on Federal Research and Development Investments National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Modernizing the Infrastructure of the National Science Foundation Federal Funds Survey, 2010-01-27 Two surveys of the National Science Foundation's Division of Science Resources Statistics (SRS) provide some of the most significant data available to understand research and development spending and policy in the United States. These are the Survey of Federal Funds for Research and Development and the Survey of Federal Science and Engineering Support to Universities, Colleges, and Nonprofit Institutions. These surveys help reach conclusions about fundamental policy questions such as whether a given field of research is adequately funded, whether funding is balanced among fields, and whether deficiencies in funding may be contributing to a loss of U.S. scientific or economic competitiveness. However, the survey data are of insufficient quality and timeliness to support many of the demands put on them. In addition, the surveys are increasingly difficult to conduct in times of constrained resources, and their technological, procedural, and conceptual infrastructure has not been modernized for procedure or content. Data on Federal Research and Development Investments reviews the uses and collection of data on federal funds and federal support for

science and technology and recommends future directions for the program based on an assessment of these uses and the adequacy of the surveys The book also considers the classification structure or taxonomy for the fields of science and engineering **CEPR Publication** ,1991 Complete Catalog of Books and Periodicals National Academy Press (U.S.),1990 **Crossing Boundaries** Julie Thompson Klein,1996 An interdisciplinary approach to knowledge
