Scientific Realism A Critical Reappraisal:

Scientific Realism N Rescher, 1987-08-31 Scientific Realism N. Rescher, 1987-08-31 The increasingly lively controversy over scientific realism has become one of the principal themes of recent philosophy 1 In watching this controversy unfold in the rather technical way currently in voque it has seemed to me that it would be useful to view these contemporary disputes against the background of such older epistemological issues as fallibilism scepticism relativism and the traditional realism idealism debate This then is the object of the present book which will recon sider the newer concerns about scientific realism in the context of these older philosophical themes Historically realism concerns itself with the real existence of things that do not meet the eye with suprasensible entities that lie beyond the reach of human perception In medieval times discussions about realism focused upon universals Recognizing that there are physical objects such as cats and triangular objects and red tomatoes the medievels debated whether such abstract objects as cathood and triangularity and redness also exist by way of having a reality independent of the concretely real things that exhibit them Three fundamen tally different positions were defended 1 Nominalism Abstracta have no independent existence as such they only exist in and through the objects that exhibit them Only particulars individual substances exist Abstract objects are existents in name only mere thought fictions by whose means we address concrete particular things 2 Realism Abstracta have an independent Varieties of Scientific Realism Evandro Agazzi, 2017-03-08 This book offers a comprehensive update existence as such on the scientific realism debate enabling readers to gain a novel appreciation of the role of objectivity and truth in science and to understand fully the various ways in which antirealist conceptions have been subjected to challenge over recent decades Authoritative representatives of different philosophical traditions explain their perspectives on the meaning and validity of scientific realism and describe the strategies being adopted to counter persisting antirealist positions The coverage extends beyond the usual discussion of realism within the context of the natural sciences and especially physics to encompass also its applicability in mathematics logic and the human sciences. The book will appeal to all with an interest in the recent realist epistemologies of science the nature of current philosophical debate and the ongoing rehabilitation of truth as the legitimate goal of scientific research **Resisting Scientific Realism** K. Brad Wray, 2018-11 Provides a spirited defence of anti realism in philosophy of science Shows the historical evidence and logical challenges facing scientific realism

Philosophy of Language and the Challenge to Scientific Realism Christopher Norris,2004-06-02 In this book Christopher Norris develops the case for scientific realism by tackling various adversary arguments from a range of anti realist positions Through a close critical reading he shows how they fail to make adequate sense on any rational consistent and scientifically informed survey of the evidence Along the way he incorporates a number of detailed case studies from the history and philosophy of science Norris devotes much of his discussion to some of the most prominent and widely influential source texts of anti realism Also included are the sophisticated versions of verificationism developed albeit in very different

ways by thinkers such as Michael Dummett and Bas van Fraassen Central to Norris s argument is a prolonged engagement with the once highly influential but nowadays neglected work of Norwood Russell Hanson This book will be welcomed especially by readers who possess some knowledge of the background debate and who wish to deepen and extend their understanding of these issues beyond an introductory level **The Oxford Handbook of Philosophy of Science** Paul Humphreys,2016-08-04 This handbook provides both an overview of state of the art scholarship in philosophy of science as well as a guide to new directions in the discipline Section I contains broad overviews of the main lines of research and the state of established knowledge in six principal areas of the discipline including computational physical biological psychological and social sciences as well as general philosophy of science Section II covers what are considered to be the traditional topics in the philosophy of science such as causation probability models ethics and values and explanation Section III identifies new areas of investigation that show promise of becoming important areas of research including the philosophy of astronomy and astrophysics data complexity theory neuroscience simulations post Kuhnian philosophy post empiricist epistemology and emergence Most chapters are accessible to scientifically educated non philosophers as well as to professional philosophers and the contributors all leading researchers in their field bring diverse perspectives from the North American European and Australasian research communities This volume is an essential resource for scholars and students

Realism in the Sciences Igor Douven, Leon Horsten, 1996 This book contains ten papers that were presented at the symposium about the realism debate held at the Center for Logic Philosophy of Science and Philosophy of Language of the Institute of Philosophy at the Katholieke Universiteit Leuven on 10 and 11 March 1995 The first group of papers are directly concerned with the realism anti realism debate in the general philosophy of science This group includes the articles by Ernan McMullin Diderik Batens Joke Meheus Igor Douven and Herman de Regt The papers of the second group concentrate on specific problems arising from the realism anti realism debate Theo Kuipers contribution discusses the problem of truth approximation Roger Vergauwen's article pertains to the issue of realism in the philosophy of mind and semantics Jaap van Brakel s article focusses on the relation between everyday concepts and scientific concepts and on the theory dependence of observation Paul Cortois investigates the relation between the question of realism and Kuhn's concept of incommensurability between scientific theories The final group contains two papers on the realism anti realism debate in the special sciences James Cushing discusses the problem of underdetermination in quantum mechanics and Jean Paul van bendegem addresses the question of the possiblity of an empiricist philosophy of mathematics Recent Themes in the Philosophy of Science S. Clarke, T.D. Lyons, 2013-03-09 Australia and New Zealand boast an active community of scholars working in the field of history philosophy and social studies of science Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for their work Each volume comprises a group of thematically connected essays edited by scholars based in Australia or New Zealand with special expertise in that particular area In each volume a majority of the

contributors are from Australia or New Zealand Contributions from elsewhere are by no means ruled out however and are actively encouraged wherever appropriate to the balance of the volume in question Earlier volumes in the series have been welcomed for significantly advancing the discussion of the topics they have dealt with I believe that the present volume will be greeted equally enthusiastically by readers in many parts of the world R W Home General Editor Australasian Studies in History And Philosophy of Science viii ACKNOWLEDGEMENTS The majority of the papers in this collection had their origin in the 2001 Australasian Association for History Philosophy and Social Studies of Science annual conference held at the University of Melbourne where streams of papers on the themes of scientific realism and commonsense were organised

Science, Reality, and Language Michele Marsonet, 1995-01-01 This book explains why anti realism is so popular with philosophers of science by showing that many contemporary philosophers of science and language who define themselves as empiricists in fact have evolved into linguistic idealists The Ethics of Today's Science and Technology Wenchao Li, Hans Poser, 2008 Beneath the discussion and clarification of problems of which both sides agreed to have them in common and which are documented in this volume one of the important insights on both sides had been disagreements depending on a different way in seeing articulating and reflecting on these problems So the English term science in differing from the German Wissenschaft which includes not only sciences of nature but also humanities is meant in the Western tradition as the uninterested research for truth especially for most general laws but the Chinese understanding seems to be characterized by an immediate connection of science and its practical use Reason, Truth, and Theology in Pragmatist Perspective Paul D. Murray, 2004 In this work Paul Murray explores which style of rationality is most appropriate to Christian theology in the contemporary pluralist postfoundationalist postmodern context At its heart is a fresh consideration of the American pragmatist tradition focussing on the writings of Richard Rorty and Nicholas Rescher Where Rorty correctly diagnoses the failures of foundationalist objectivism Rescher's pragmatic idealism is presented as healing the ills in Rorty's own neo pragmatism The significant resonance between Rescher's view of rationality and Christian understanding of the trinity is explored In turn Donald MacKinnon's influential writings are presented as exemplifying just such an approach to theology Murray both articulates an enriched form of Christian postliberalism committed to receiving and learning from other traditions of thought and practice and probes the claim that the dynamics of human rationality can be expected to reflect the Trinitarian dynamics of God's being Paul Murray presents us here with an exhaustive and insightful study of recent pragmatic theory in which he sets up rhythms of healing and completion as well as interrogation particularly remarkable is his exploration of Christianity as the deep and in some sense final interlocutor of pragmatic tradition I strongly recommend this book Olivier Davis Professor of Christian Doctrine King's College London This is a mature wide ranging work that by uniting the intellectual and the practical carries both rational and ethical conviction It does equal justice to the classic teachings of Christianity and to the challenges to rethink them in dialogue with modern and postmodern approaches The

result is a conception of Christianity both generously orthodox and deeply engaged with contemporary life and thought It is especially good to see the profound contribution of Donald MacKinnon understood and developed with such perception and relevance David F Ford Regius Professor of Divinity University of Cambridge Paul Murray is currently Lecturer in Systematic Theology within the Department of Theology at the University of Durham England He has previously held posts at St Cuthbert's Seminary Ushaw College Durham and Newman College of Higher Education Birmingham Essays of his exploring issues in philosophical theology science and theology and contemporary Roman Catholic theology have appeared in leading journals and edited collections This is his first monograph Faces of Medicine W.J. van der Steen, P.J. Thung, 2012-12-06 1 MEDICINE Illness disease and disability plague man in every culture But the form they take is not the same everywhere Neither is man's reaction Coping strategies and the experience and knowledge backing them depend very much on cultural setting So medicine the fabric of strategy and know ledge can only be understood in the context of culture In western society today severe judgements are passed on medicine Its store of knowledge and experience and its repertory of strategies have grown immensely during the last few decades But it hardly alleviates dominant ailments especially chronic diseases diseases of old age and disturbances of social and mental functioning We know that these ailments have come to the fore as the incidence of more primitive diseases declined in industrial societies Infant deaths and malnutrition and infections striking at young age have dwindled to marginal significance in Western Europe and life expectancy at birth is twice that of some 150 Engaged Scholarship Andrew H. Zolo, 2012-12-06 Professor Danilo Zolo has written an account of Otto Neurath's epistemology which deserves careful reading by all who have studied the development of 20th century philosophy of science Here we see the philosophical Neurath in his mature states of mind the vigorous critic the scientific Utopian the pragmatic realist the sociologist of physics and of language the unifier and encyclopedist always the empiricist and always the conscience of the Vienna Circle Zolo has caught the message of Neurath's ship at sea in the reflexivity of language and he has sensibly explicated the persisting threat posed by consistent conventionalism And then Zolo beautifully articulates of the epistemological priority of sociology the provocative theme Was Neurath correct Did he have his finger on the pulse of empiricism in the time of a genuine unity of the sciences His friends and colleagues were unable to follow all the way with him but Danilo Zolo has done so in this stimulating investigation of what he tellingly calls Otto Neurath's philosophical legacy R S COHEN ix ABBREVIATIONS Pseudo Otto Neurath Pseudorationalismus der Falsifikation Erkenntnis 5 1935 pp 353 65 Foundations Otto Neurath Foundations of the Social Sciences in International Encyclopedia of Unified Science vol 2 no 1 pp

Pagnini, 2013-03-09 The papers collected here comprise the proceedings of a Workshop in honor of Merrilee and Wes Salmon held in Florence on May 17 18 1996 The aim of the meeting was to pay homage to these two American scholars whose contact with Italian and European Universities and Institutes had a major influence on Continental thought in the field of epistemology and probability In fact Merrilee and Wes spent various periods lecturing at the Universities of Bologna Florence Rome Trieste Catania and Pisa as well as in the University of Constance where they helped to build a strong cultural bridge with the Pittsburgh Center for the Philosophy of Science The Florence Center for the History and Philosophy of Science is particularly thankful to the Salmons for their ongoing cooperation and frequent visits We must not forget that Wes Salmon was in the Florence Center and at the Philosophy Department of Florence as visiting scholar on many occasions and that he made important contributions which have later appeared in Italian journals such as Iride and Rivista di jilosojia Merrilee was a speaker at the Conference on Genetics Linguistics and Archaeology May 20 24 1991 organized by the Florence Center Both Wes and Merrilee often enlivened the arguments of the initiatives they took part in The Role of Theology in the History and Philosophy of Science Joshua M. Moritz, 2017-11-13 After a bibliographic introduction highlighting various research trends in science and religion Joshua Moritz explores how the current academic and conceptual landscape of theology and science has been shaped by the history of science even as theology has informed the philosophical foundations of science The first part assesses the historical interactions of science and the Christian faith looking at the cases of human dissection in the Middle Ages and the Galileo affair in order to challenge the common notion that science and religion have always been at war Part two investigates the nature of the interaction between science and Christian theology by exploring the role that metaphysical presuppositions and theological concepts have played and continue to play within the scientific process
