Foundations of Data Visualization Min Chen, Helwig Hauser, Penny Rheingans, Gerik Scheuermann, 2020-08-11 This is the first book that focuses entirely on the fundamental questions in visualization Unlike other existing books in the field it contains discussions that go far beyond individual visual representations and individual visualization algorithms It offers a collection of investigative discourses that probe these questions from different perspectives including concepts that help

frame these questions and their potential answers mathematical methods that underpin the scientific reasoning of these questions empirical methods that facilitate the validation and falsification of potential answers and case studies that stimulate hypotheses about potential answers while providing practical evidence for such hypotheses Readers are not instructed to follow a specific theory but their attention is brought to a broad range of schools of thoughts and different ways of investigating fundamental questions As such the book represents the by now most significant collective effort for gathering a large collection of discourses on the foundation of data visualization Data visualization is a relatively young scientific discipline Over the last three decades a large collection of computer supported visualization techniques have been developed and the merits and benefits of using these techniques have been evidenced by numerous applications in practice These technical advancements have given rise to the scientific curiosity about some fundamental questions such as why and how visualization works when it is useful or effective and when it is not what are the primary factors affecting its usefulness and effectiveness and so on This book signifies timely and exciting opportunities to answer such fundamental questions by building on the wealth of knowledge and experience accumulated in developing and deploying visualization technology in practice

The Mysterious Science of the Sea, 1775-1943 Natascha Adamowsky, 2015-10-06 The depths of the oceans are the last example of terra incognita on earth Adamowsky presents a study of the sea arguing that contrary to popular belief post Enlightenment discourse on the sea was still subject to mystery and wonder and not wholly rationalized by science

Thinking Like Einstein Thomas G. West, 2010-03-05 Albert Einstein once said that all of his most important and productive thinking was done by playing with images in his imagination Only in a secondary stage did he translate with great effort he says these images into the language of words and mathematics that could be understood by others According to Thomas G West Einstein was a classic example of

a strong visual thinker a person who tends to think in images and visual patterns and sometimes has difficulty with words and numbers In his awarding winning book In the Mind s Eye West discussed the connections between highly talented visually oriented persons like Einstein and certain learning disabilities such as dyslexia Now in Thinking Like Einstein West investigates the new worlds of visual thinking insight and creativity made possible by computer graphics and information visualization technologies He argues that with the rapid spread of inexpensive and powerful computers we are now at the beginning of a major transition moving from an old world based mainly on words and numbers to a new world where high level work in all fields will eventually involve insights based on the display and manipulation of complex information using moving computer images West profiles several highly creative visual thinkers such as James Clerk Maxwell Nikola Tesla and Richard Feynman pointing out that there is a long history of using visualization rather than words or numbers to solve problems Citing the longstanding historical conflicts between image lovers and image haters West examines the relationship of art scientific knowledge and differences in brain capabilities observing how modern visual thinkers with visualization technologies seem to have learned how to cut through the problems of overspecialization in academia and in the workplace West predicts that computer visualization technology will radically change the way we all work and think For thousands of years the technology of writing and reading has tended to promote the dominance of the left hemisphere of the brain with its linear processing of words and numbers Now the spread of graphical computer technologies is permitting a return to our visual roots with a new balance between hemispheres and ways of thinking presenting new opportunities for problem solving and big picture thinking Thus he argues that the newest technologies will help us to reaffirm some of our oldest capabilities allowing us to see previously unseen patterns and to restore a balance in thought and action
