## **Scientists Confront Velikovsky:**

*Scientists Confront Velikovsky* Donald Goldsmith, 1977      *Scientists Confront Scientists Who Confront Velikovsky* Velikovsky, 1978-10-01      Impact! Gerrit L. Verschuur, 1997-12-18 Most scientists now agree that some sixty five million years ago an immense comet slammed into the Yucatan detonating a blast twenty million times more powerful than the largest hydrogen bomb punching a hole ten miles deep in the earth Trillions of tons of rock were vaporized and launched into the atmosphere For a thousand miles in all directions vegetation burst into flames There were tremendous blast waves searing winds showers of molten matter from the sky earthquakes and a terrible darkness that cut out sunlight for a year enveloping the planet in freezing cold Thousands of species of plants and animals were obliterated including the dinosaurs some of which may have become extinct in a matter of hours In *Impact* Gerrit L Verschuur offers an eye opening look at such catastrophic collisions with our planet Perhaps more important he paints an unsettling portrait of the possibility of new collisions with earth exploring potential threats to our planet and describing what scientists are doing right now to prepare for this awful possibility Every day something from space hits our planet Verschuur reveals In fact about 10 000 tons of space debris fall to earth every year mostly in meteoric form The author recounts spectacular recent sightings such as over Allende Mexico in 1969 when a fireball showered the region with four tons of fragments and the twenty six pound meteor that went through the trunk of a red Chevy Malibu in Peekskill New York in 1992 the meteor was subsequently sold for 69 000 and the car itself fetched 10 000 But meteors are not the greatest threat to life on earth the author points out The major threats are asteroids and comets The reader discovers that astronomers have located some 350 NEAs Near Earth Asteroids objects whose orbits cross the orbit of the earth the largest of which are 1627 Ivar 6 kilometers wide and 1580 Betula 8 kilometers Indeed we learn that in 1989 a bus sized asteroid called Asclepius missed our planet by 650 000 kilometers a mere six hours and that in 1994 a sixty foot object passed within 180 000 kilometers half the distance to the moon Comets of course are even more deadly Verschuur provides a gripping description of the small comet that exploded in the atmosphere above the Tunguska River valley in Siberia in 1908 in a blinding flash visible for several thousand miles every tree within sixty miles of ground zero was flattened He discusses Comet Swift Tuttle the most dangerous object in the solar system a comet far larger than the one that killed off the dinosaurs due to pass through earth s orbit in the year 2126 And he recounts the collision of Comet Shoemaker Levy 9 with Jupiter in 1994 as some twenty cometary fragments struck the giant planet over the course of several days casting titanic plumes out into space when Fragment G hit it outshone the planet on the infrared band and left a dark area at the impact site larger than the Great Red Spot In addition the author describes the efforts of Spacewatch and other groups to locate NEAs and evaluates the idea that comet and asteroid impacts have been an underrated factor in the evolution of life on earth Astronomer Herbert Howe observed in 1897 While there are not definite data to reason from it is believed that an encounter with the nucleus of one of the largest comets is not to be desired As Verschuur shows in *Impact*

we now have substantial data with which to support Howe's tongue-in-cheek remark. Whether discussing monumental tsunamis or the innumerable comets in the Solar System, this book will enthrall anyone curious about outer space, remarkable natural phenomenon or the future of the planet earth.

The Oxford Handbook of Indigenous American Literature James Howard Cox, Daniel Heath Justice, 2014. Over the course of the last twenty years, Native American and Indigenous American literary studies has experienced a dramatic shift from a critical focus on identity and authenticity to the intellectual, cultural, political, historical, and tribal nation contexts from which these Indigenous literatures emerge. The Oxford Handbook of Indigenous American Literature reflects on these changes and provides a complete overview of the current state of the field. The Handbook's forty-three essays, organized into four sections, cover oral traditions, poetry, drama, non-fiction, fiction, and other forms of Indigenous American writing from the seventeenth through the twenty-first century. Part I attends to literary histories across a range of communities, providing, for example, analyses of Inuit, Chicana/o, Anishinaabe, and Métis literary practices. Part II draws on earlier disciplinary and historical contexts to focus on specific genres, as authors discuss Indigenous non-fiction, emergent trans-Indigenous autobiography, Mexican and Spanish poetry, Native drama in the U.S. and Canada, and even a new Indigenous children's literature canon. The third section delves into contemporary modes of critical inquiry to expound on politics of place, comparative Indigenism, trans-Indigenism, Native rhetoric, and the power of Indigenous writing to communities of readers. A final section thoroughly explores the geographical breadth and expanded definition of Indigenous American through detailed accounts of literature from Indian Territory, the Red Atlantic, the far North, Yucatán, Amerika Samoa, and Francophone Quebec. Together, the volume is the most comprehensive and expansive critical handbook of Indigenous American literatures published to date. It is the first to fully take into account the last twenty years of recovery and scholarship and the first to most significantly address the diverse range of texts, secondary archives, writing traditions, literary histories, geographic and political contexts, and critical discourses in the field.

Paranormal Borderlands of Science Kendrick Frazier, 2023-10-17. Headlines and television news reports feature accounts of reincarnation, the predictions of astrologers, and psychic miracles. Citizens report UFO sightings. Police departments call on psychics to provide clues in baffling crimes. From every available information source, the public is bombarded with unsubstantiated claims of paranormal phenomena. How much of the evidence is reliable? What is the truth behind these claims? *Paranormal Borderlands of Science* is an exciting, well-informed examination of the most publicized and exotic claims of astrology, ESP, psychokinesis, precognition, UFOs, biorhythms, and other phenomena. Written by respected psychologists, astronomers, and other scientists, philosophers, investigative journalists, and magicians, the 47 articles in this superb collection present a skeptical treatment of pseudoscientific claims, an aspect often sorely neglected in sensationalized media reports. This book is an effort to help readers sort fact from fiction and sense from nonsense among the astonishing variety of assertions labeled paranormal. Never

before published in book form the essays in this anthology originally appeared in the *Skeptical Inquirer* a leading magazine devoted to the critical investigation of pseudoscience from a scientific viewpoint Among the contributors are Isaac Asimov distinguished science fiction author Martin Gardner Scientific American columnist James Randi The Amazing Randi Philip Klass noted UFO skeptic Scot Morris Omni and James Oberg NASA An essential contribution to skeptical literature this book will be of lasting value to all those wishing to balance the case for paranormal claims by reading the dissenting critics

*Liberty Means Freedom for All* Steven H. Propp, 2012-11-16 Thomas Anderson has just graduated from CSU Stentoria with his degree in Political Science Its an election year and as a young progressive in California who has been raised by equally progressive parents he is very much concerned with the political issues currently being discussed in the mass media A chance encounter with a fellow graduate named Kelly Kelso however shakes up his settled view of the world He is challenged to examine the rising number of alternatives to the two party system presented by third party movements such as the Libertarian Party and the Green Party and is forced to acknowledge that there is far more to politics than simply Democrat versus Republican and liberal versus conservative Thomas delves energetically into not only the growing Libertarian movement but the free market perspective of the Austrian School of economics as well as the rigid yet compelling view of Ayn Rand's philosophy of Objectivism His explorations grow wider now encompassing the Tea Party movement and the Christian Right tax resisters and gun rights advocates survivalists and militia members anarchists communists and Democratic Socialists as well as the Occupy Wall Street movement He debates the radical environmental views of animal welfare and animal rights advocates and challenges opponents of corporate globalism as well as deniers of global warming as he struggles to reformulate and articulate his own developing beliefs while coping with a sea of conflicting ideas and opposition But this abstract political theory is brought into sharp encounter with concrete political reality when Thomas hears a news report of an armed conflict with authorities taking place just outside of town involving someone with whom he has become emotionally involved

**At The Fringes Of Science** Michael W. Friedlander, 2018-03-05 Scientific discoveries are constantly in the news Almost daily we hear about new and important breakthroughs But sometimes it turns out that what was trumpeted as scientific truth is later discredited or controversy may long swirl about some dramatic claim What is a nonscientist to believe Many books debunk pseudoscience and some others present only the scientific consensus on any given issue In *At the Fringes of Science* Michael Friedlander offers a careful look at the shadowlands of science What makes Friedlander's book especially useful is that he reviews conventional scientific method and shows how scientists examine the hard cases to determine what is science and what is pseudoscience Emphasizing that there is no clear line of demarcation between science and nonscience Friedlander leads the reader through

case after entertaining case covering the favorites of tabloid science such as astrology and UFOs scientific controversies such as cold fusion and those maverick ideas that were at first rejected by science only to be embraced later There are many good stories here but there is also much learning and wisdom Students of science and interested lay readers will come away from this book with an increased understanding of what science is how it works and how the nonscientist should deal with science at its fringes

**The Reception Of Unconventional Science** Seymore H Mauskopf, 2019-06-26 The issue of perhaps greatest concern to historians of science today is the internalist-externalist dichotomy This volume directly addresses that issue at the same time providing a context for the serious study of heterodox science and scientific theories The book consists of four studies each of which considers the response of a scientific community to an unconventional theory or claim the acausal physics of Heisenberg Wegener's geological theory of continental drift acupuncture and the statistical argument for extrasensory perception As they reveal a wide range of reactions to orthodoxy the studies themselves exemplify the range of approaches the historian may use in examining scientific unconventionality
