Looking For The Frontier A Search For Value:

Heuristic Search Stefan Edelkamp, Stefan Schroedl, 2011-05-31 Search has been vital to artificial intelligence from the very beginning as a core technique in problem solving The authors present a thorough overview of heuristic search with a balance of discussion between theoretical analysis and efficient implementation and application to real world problems Current developments in search such as pattern databases and search with efficient use of external memory and parallel processing units on main boards and graphics cards are detailed Heuristic search as a problem solving tool is demonstrated in applications for puzzle solving game playing constraint satisfaction and machine learning While no previous familiarity with heuristic search is necessary the reader should have a basic knowledge of algorithms data structures and calculus Real world case studies and chapter ending exercises help to create a full and realized picture of how search fits into the world of artificial intelligence and the one around us Provides real world success stories and case studies for heuristic search algorithms Includes many AI developments not yet covered in textbooks such as pattern databases symbolic search and parallel processing units

A Theory of Heuristic Information in Game-Tree Search Chun-Hung Tzeng, 2012-12-06 Searching is an important process in most AI systems especially in those AI production systems consisting of a global database a set of production rules and a control system Because of the intractability of uninformed search procedures the use of heuristic information is necessary in most searching processes of AI systems This important concept of heuristic information is the central topic of this book We first use the 8 puzzle and the game tic tac toe noughts and crosses as examples to help our discussion The 8 puzzle consists of eight numbered movable tiles set in a 3 x 3 frame One cell of the frame is empty so that it is possible to move an adjacent numbered tile into the empty cell Given two tile configurations initial and goal an 8 puzzle problem consists of changing the initial configuration into the goal configuration as illustrated in Fig 1 1 A solution to this problem is a sequence of moves leading from the initial configuration to the goal configuration and an optimal solution is a solution having the smallest number of moves Not all problems have solutions for example in Fig 1 1 Problem 1 has many solutions while Problem 2 has no solution at all
