Clathrochelates Y.Z. Voloshin, N.A. Kostromina, R.K. Krämer, 2002-09-19 Clathrochelates are compounds which contain a metal ion encapsulated within a three dimensional cage of macrobicyclic ligand atoms Within this cage the metal has unique properties and is to a great extent isolated from environmental factors Such complexes are suitable as models of the most essential biological systems membrane transport electron carriers highly selective and sensitive analytical reagents catalysts for photochemical and redox processes cation and anion receptors etc The aim of this monograph is to generalize and analyze experimental and theoretical data on clathrochelates in order to promote further research in this promising field of chemistry Chapter 1 gives general concepts of complexes with encapsulated metal ions discusses basic specific features of these compounds considers and characterizes the main types of compounds with encapsulated metal ions and the main classes of clathrochelates and includes the current nomenclature Chapter 2 deals with the pathways of clathrochelate synthesis and the general procedures for the synthesis of macrobicyclic tris dioximates phosphorus containing tris diiminates sepulchrates sarcophagins and polyene and other types of clathrochelate complexes Chapter 3 concerns studies of the electronic and spatial structure of clathrochelate complexes In Chapter 4 the kinetics and mechanism of synthesis and decomposition reactions of macrobicyclic tris dioximates sarcophagins and sepulchrates in solution and gas phases are discussed Chapter 5 considers the electrochemical photochemical and some other characteristics of clathrochelates and their applications associated with these characteristics Finally the practical applications of the unique properties of clathrochelates and perspectives on the synthesis of new clathrochelates are described in Chapters 6 and 7 respectively

Advances in Organic Synthesis Atta-ur-Rahman, 2013-03-27 Advances in Organic Synthesis is a book series devoted to the latest advances in synthetic approaches towards challenging structures. It presents comprehensive articles written by eminent authorities on different synthetic approaches to selected target molecules and new methods developed to achieve specific synthetic transformations. Contributions are written by eminent scientists and each volume is edited by an authority in the field. Advances in Organic Synthesis is essential for all organic chemists in the academia and industry who wish to keep abreast of rapid and important developments in the field.

Polyarenes II Jay S. Siegel, Yao-Ting Wu, 2014-11-25 Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

Methods and Special Applications in Bacterial Ecology Edward R. Leadbetter, Jeanne S. Poindexter, 1985 Volume 2
Organoselenium Chemistry Thomas G. Back, 1999-07-22 Organoselenium chemistry is proving increasingly valuable to the synthetic organic chemist. Selenium residues are easily introduced into organic molecules; they serve to effect a variety of useful transformations and are easily removed at the end of the sequence. These processes are often characterized by high chemo regio and stereoselectivity. Recent enantioselective variations of selenium mediated reactions are further extending their scope and utility. The use of organoselenium compounds in organic conductors is another area of intense current interest. **Organoselenium Chemistry: A Practical Approach** is written by an international group of experts in the field.
