Lonergan, Social Transformation, and Sustainable Human Development Joseph Ogbonnaya, 2013-01-29 Secular contemporary development discourse deals with the problems of societal development and transformation by prioritizing the human good in terms of vital and social values with the aim of providing the basic necessities of life through social institutions that work While such an approach is profitable by promoting economic growth it does not take note of other dynamics of social progress and development Also it fails to notice the consequences of development strategies on human flourishing well being and happiness Ogbonnayu argues for an integral approach to development by engaging in a fruitful dialogue between Bernard Lonergan's philosophical anthropology with contemporary development discourse as represented in select theories of development and in select principles of Catholic social teaching It makes a case for social progress and transformation as emanating from human understanding Also it highlights the parts of Lonergan's theory that contribute to

an understanding specifically of his treatment of bias and of the shorter and longer cycles of societal decline In view of the reality of moral impotence and limitations it considers the reversal of societal decline as possible through the supernatural solution of God's grace

The (Pre-)dawning Of Functional Specialization In Physics Terrance J Quinn, 2017-03-14 In modern physics various fundamental problems have become topics of ongoing debate There was the 20th century climb to a Standard Model still accurate at the highest energy levels obtainable so far But since the 1970s a different approach to physics advocates for theories such as string theory known for their mathematical elegance even though they either cannot be verified in data or contradict presently known experimental results In philosophy of physics there is a gradually emerging consensus that philosophy of physics and physics somehow contribute to a common enterprise But there is little sign of progress toward consensus about the nature of that unity All the while it is generally recognized that physics is interdisciplinary There are of course differences in focus But implicitly at least there are no sharp dividing lines between physics and philosophy of physics pure and applied physics physical chemistry biophysics medical physics history and philosophy of physics physics and society physics education and so on What then is progress in physics The question here is not about ideal structures but asks about what is going on in physics Beginnings in discerning the presence of eight main tasks help reveal the pre emergence of a normative omni disciplinary basis for collaboration that once adverted to promises to be constitutive of a new and increasingly effective control of meaning Originally discovered by Bernard Lonergan in 1965 progress in the new collaboration will not seek to eliminate specialized expertise It will though divide tasks within an eightfold functional division of labor This book invites attention to data for each of the eight main tasks evident and self evident in existing scholarship in the community The book also makes preliminary efforts toward envisioning something of what functional collaboration will look like in physics the Academy and Society

Haughey SJ has gathered twelve professionals in higher education from a variety of disciplines: philosophy, theology, health care, business and administration. What they have in common reflects the creative understanding of the meaning of Catholicism as Haughey has found it to operate in Catholic higher education. Each essay in the first six chapters describes how its author has assembled a unique whole from within his or her particular area of academic competence. The last six chapters are more autobiographical, with each author describing what has become central to his or her identity.
