

Features of Macroeconomics

- ❖ It is the study of the economy in totality.
- ❖ It uses lumping method for the purpose of economic study. Under lumping method the general price level is studied, and not prices of individual products.
- ❖ It concerns with the behavior of aggregates.
- ❖ It is a general equilibrium analysis in which everything depends on everything else. For instance, a change in income level may results in change in savings, which in turn influence investment.
- ❖ Macroeconomics is the obverse of microeconomics.
- ❖ Therefore it deals with total or aggregates national income output and employment, total consumption, saving and investment and the general price level.
- ❖ A bird's eye view to entire economy

Macroeconomics Introduction:

Introduction to Macroeconomics Gilad James, PhD, Introduction to Macroeconomics is a fundamental course that introduces students to the basic principles and concepts of macroeconomics. It provides a comprehensive understanding of the functioning and structure of the economy as a whole and how the macroeconomic variables such as gross domestic product (GDP), inflation, unemployment, and international trade affect the overall performance of the economy. The course covers key macroeconomic models, policies, and theories that aid in analyzing and explaining the economic behavior of households, businesses, and governments. The first paragraph of the course introduces and defines the subject matter of macroeconomics, provides a brief overview of its history, and highlights its significance in understanding the economy. It focuses on aggregate demand, aggregate supply, inflation, and unemployment and how they interact to determine the overall economic performance. The second paragraph highlights the various macroeconomic models such as Classical, Keynesian, and Monetarist theories and how they relate to the economy. Finally, it discusses the role of economic policies, including fiscal and monetary policies, in regulating and stabilizing macroeconomic variables and the principles that guide policy implementation. The course is essential for students pursuing economics or related fields, providing a strong foundation for understanding and analyzing macroeconomic phenomena in real-world situations.

An Introduction to Macroeconomics Louis-Philippe Rochon, Sergio Rossi, 2016-07-27 This important new book introduces students to the fundamental ideas of heterodox economics. It is written in a clear way by top heterodox scholars. They offer not only a critique of the dominant approach to economics but also present a positive and constructive alternative. Students interested in an explanation of the real world will find the heterodox approach not only satisfying but ultimately better able to explain a money-using economy prone to periods of instability and crises.

Rethinking Macroeconomics John F. McDonald, 2016-05-26 The field of macroeconomics has always played host to contesting schools of thought, but the recent Global Financial Crisis has exacerbated those differences. In order to fully understand macroeconomics at the introductory level, students need to be aware of these controversies. *Rethinking Macroeconomics* introduces students to the different schools of thought, equipping them with the knowledge needed for a real understanding of today's macro economy. The text guides the reader through various approaches to the analysis of the macro economy of the U.S. before presenting the data for several critical economic episodes in order to discover which analytical method provides the best explanation for each event. It covers key background information on topics such as the basics of supply and demand, macroeconomic data, international trade, and the balance of payments and the creation of the money supply. Offering the context that is missing from existing introductory macroeconomics texts, John F. McDonald encourages students to think critically about received economic wisdom. This text is the ideal complement to any introductory macroeconomics textbook and is best suited for undergraduate students who have had an introductory course in economics.
